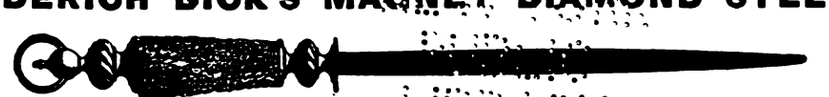
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

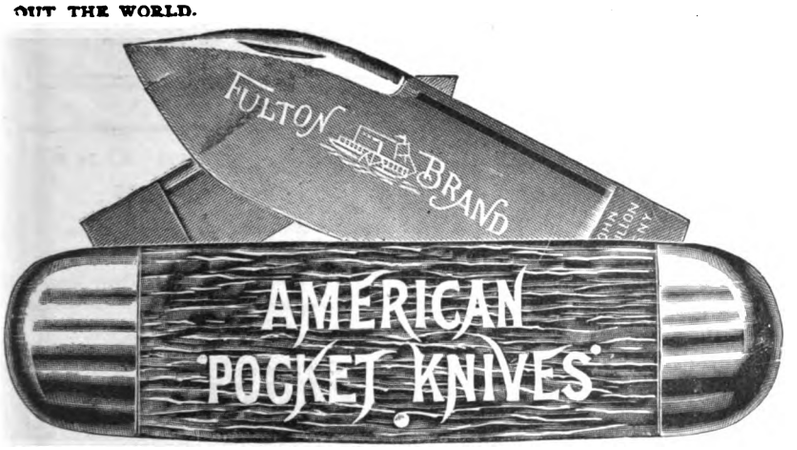
has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York, U.S.A.



and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

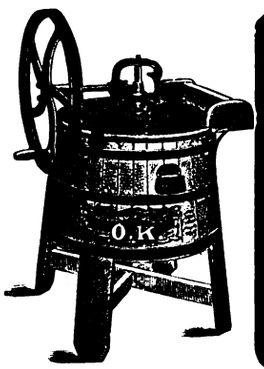
FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.



These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.



Finest Quality American Pocket Cutlery in large variety. Knives that are good sellers and will give satisfaction to the user.

ESTABLISHED 1835

JOHN CHATILLON & SONS, Now York City.

DON'T WAIT

until some other Hardware Merchant is selling all the O. K. Washing Machines in your vicinity.

Take up their sale now,—before some of your competitors,—and you'll have the prestige of being first to sell the O. K. Wasning Machine.

The O. K. Washers are a little better, and a little different from other Washing Machines.

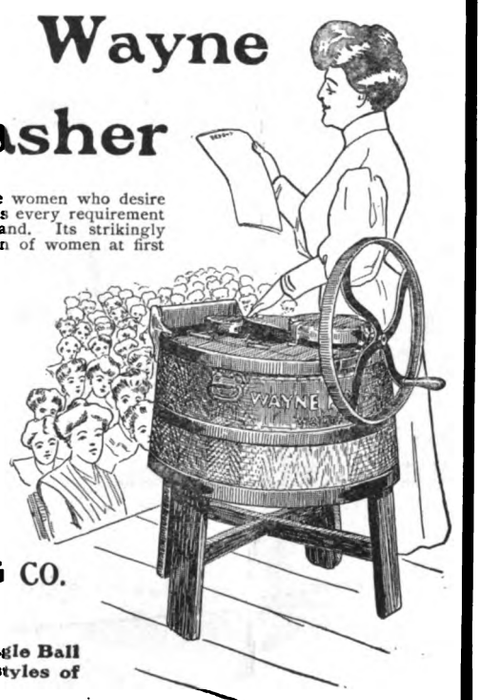
Our little booklet tells all about them. Free on request.

H. F. BRAMMER MFG. CO., Davenport, Iowa

Every Hardware Dealer

recognizes that an advertised article i four t mes easier to sell than an unadvertised one.

We have appropriated this season a good many thousand dollars for advertising our products in the large papers and magazi: es of national r· putation. You are certain to have calls for:



The Hartmann Stockade Wire Fence
The Hartmann Steel Picket Fence
The Glen Steel Folding Mat

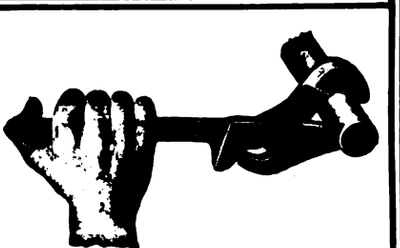
If y ur stock on these goods is low just drop us a line. You can't help selling them and run no risk in stocking up.

GLEN MFG. CO.
160 Mill St.
ELLWOOD CITY, - PA.

The New Wayne Rotary Washer

THIS MACHINE is built to satisfy those women who desire nothing but the best and it fully meets every requirement the most exacting customer may demand. Its strikingly handsome appearance attracts the attention of women at first sight and its many exclusive features can be so convincingly explained that sales are quickly made.

Wayne Tubs are made of the finest kiln dried Cypress and are finished in Cherry with two coats of varnish. The hoops are finished in Silver and Gold Bronze. All mechanical parts are of the finest material, carefully adjusted and will last for years. The legs are detachable or stationary as ordered. Every part of this machine is of the highest standard quality.



We will gladly forward interested dealers full particulars and prices.

A Long (K)Night In HARDWARE

¶ For years retail hardware men have been groping in the dark, looking for some efficient way to increase their business—some of them have found it!

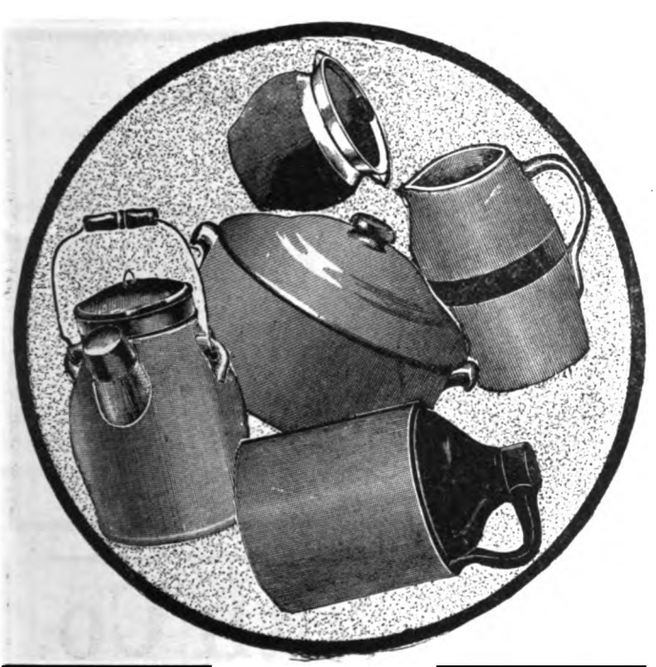
Warren's Patent Sectional Glass Front Shelving

is designed and manufactured by a Hardware Man for Hardware Men.

¶ You can keep a line of samples of your entire stock on exhibition at all times.

¶ It preserves each article in the same attractive newness that it comes from the factory, prevents *dust, rust, finger-marks and dirt.*

¶ It enables you to sell goods to a *German*, a *Scandinavian* or *any* other foreigner who, even though he cannot speak English can *point* to what he wants.



¶ It improves the appearance of your store *100 per cent;* enables your salesmen to spend their time *selling* goods instead of *hunting* for them, and will *pay for itself in one year.*

¶ Send dimensions of your store and let us supply you—FREE—with a color plate made to scale, showing how *your* store will look when equipped with The Best Shelving in the world for your purpose.

¶ Remember the shelving is made on the unit plan—if you want to experiment—don't wish a complete outfit now—you can buy one—two—three stacks or sections—the rest will follow as your satisfaction increases.

MORE THAN ONE WAY OF KILLING A CAT

There is also more than one way of building up a big and profitable trade in fishing tackle, but—

By far the best way of doing this is to carry a full stock of "Bristol" Steel Fishing Rods. They are becoming more and more popular every day — the natural result of high merit backed by liberal and continuous advertising.

What's more, our discount to dealers gives you a chance to sell them at prices which assure a large margin of profit.

Better get busy. Your regular jobber can fill your order. If he won't, we will take the matter up with you direct.

Shall we send you our catalogue?

Our Rods are the ORIGINAL Steel Fishing Rods. We have been making them for over fifteen years. Look for our name and trade-mark "Bristol" on every reel seat. They are absolutely guaranteed to be free from defects in material or workmanship.

HARDWARE

The Morse Twist Drill and Machine Co., New Bedford, Mass., having purchased from the Leland & Faulconer Mfg. Co., of Detroit, Michigan, all patents and right to manufacture their single and double tool grinders, including all complete working drawings, patterns, jigs, tools and fixtures, will solicit from parties desiring machines of this nature orders or prices, both of which will receive prompt attention.

♣

The Malcolm Rifle Telescope M'f'g. Co., which was established in Syracuse N. Y. in 1857, by William Malcolm and was conducted there by him until his death, has been purchased by parties in Auburn, N. Y., where it will be carried on in the same excellent manner which has made the Malcolm Telescope so famous in its line.

♣

George Wostenholm & Son, Ltd., Sheffield, England, have recently removed their New York office from Reade Street, where they have been since 1898, to 105 Chambers Street. A steady increase in the business of this concern made the change necessary by demanding larger space for the surplus stock department and providing a better show room which would increase the facilities for doing the business. George Quirk, who has successfully managed the office since 1898, will continue to do so.

♣

The establishment of the Knapp-Cramer Hardware Company, North Tonawanda, N. Y., was badly damaged by fire on the 21st ult., the loss being in the neighborhood of $25,000 which was fully covered by insurance. As soon as the insurance is adjusted the business will be resumed on a larger scale than before.

AWARD OF PRIZES.

The prizes offered by *Engineering News* and the *Cement Age*, of New York, for the best papers on "The Manufacture of Concrete Blocks and Their Use in Building Construction," have just been awarded by the jury, which was composed of Robert W. Lesley, past president of the American Cement Manufacturers' Association; Richard L. Humphrey, president of the Cement Users' Association, and Prof. Edgar Marburg, secretary of the American Society of Testing Materials. The first prize of $250 was won by a paper by H. H. Rice, of Denver, Colorado, secretary of the American Hydraulic Stone Company. The second prize of $100 is given to a paper by William M. Torrance, C. E., of New York City, assistant engineer in charge of concrete-steel design for the Hudson Tunnel Companies.

"OUR NEIGHBORHOOD."

We have been favored with several consecutive copies of "Our Neighborhood," which is a very handsome twenty page magazine published by the employees of the New York National Exchange Bank, the literary contents of which, under the editorship of G. A. Prahl, gave the best evidence of its editorial excellence, while it makes one acquainted with all the characteristics of our neighborhood. It does justice to the West side and aids in the popularity of the New York National Exchange Bank which is noted among the banks of the country as being the "Bill of Lading" Bank of New York, of which department they have made a specialty. Bills of lading sent them receive prompt attention and often save losses on shipments.

SCHOFIELD'S "ACME" DUST PAN.

The name of the 20th Century Dust Pan has been changed by the manufacturers, Schofield & Co., Freeport, Ill., to "Schofield's Acme Dust Pan" to prevent its being mistaken by another which has been on the market under the name of "The 20th Century"; "The Schofield's Acme" is the name of that Dust Pan, which requires no stooping, and can be pressed so tight to the floor that it takes up all the dust, and when raised up the dust falls into the pocket and can be carried from room to room, until all the dust is taken up, and no danger of spilling carrying around. It is made of steel and will last as long as ten ordinary Dust Pans, and has so many other advantages that no one, after using it, will ever use any other.

RAILWAYS OF THE WORLD.

Consul-General Guenther, of Frankfort, supplies the following remarkable railroad statistics:

According to the most recent German statistics, the length of the world was 537,105 miles on December 31, 1904, of which 270,386 miles were in America, 187,776 in Europe, 46,592 miles in Asia, 15,649 miles in Africa, and 16,776 miles in Australasia. Of the mileage in Europe Germany stands first (34,016), followed in their order by Russia (33,286), France (28,266), Austria-Hungary (24,261) the United Kingdom (22,592), Italy (10025), Spain (8,656), Sweden and Norway (7,730). The average cost of construction of the European railroads per mile is estimated at $107,577, while for the remainder of the world the estimate is only $59,680. The total value of the railroads of the world according to these statistics is $43,000,000,000 of which the European roads figure for $22,000,000,000. The estimate of rolling stock is as follows in numbers: Locomotives, 150,000; passenger coaches 225,000, and freight cars, 3,000,000.

INFRINGEMENT SUIT.

The Glen Mfg. Co. of Ellwood City, Pa. manufacturers of The Glen Steel Folding Mat has brought suit for infringment on their patents against Geo. C. Sleeth of New Jersey who makes a steel mat known as The Rossman Mat sold by the Rossman Manufacturing Co. The Glen people state that they are going to vigorously prosecute their suit and desire to warn all dealers of the danger they run in handling the infringing articles.

NEW YORK HARDWARE JOBBERS.

The annual meeting of the New York State Association of Hardware Jobbers will be held at the Ft. George Club, Albany, on the 12th inst. The business session will be called to order at 11 A. M., dinner taking place at two o'clock. It is hoped that a large representation of the membership will be in attendance.

ORGANIZATION OF CLASSES IN ESTIMATING AND BUILDING.

A series of classes which should prove of interest to all men in the building trades and real estate is now organizing at the Educational Department, West Side Young Men's Christian Association, 318 West Fifty-seventh Street, New York. The scope of the classes is to teach general building construction, estimating and drafting to superintendents, foremen, clerks, mechanics, real estate men, etc. A set of illustrated lectures on construction will be given, to enable men to thoroughly undestand every part of a building. These talks will not be highly technical, but sufficient for general work, and most of the illustrations will be from actual building. Groups of not over twenty men will be in charge of practical estimators and will take up the work of the various building trades. Plans and specifications and working drawings of actual buildings will be used.

These classes were opened for the first time in New York last year in September, at the Fifty-seventh Street branch of the Y. M. C. A., with an enrollment of eighty pupils. They proved very successful. The classes this year based upon the experience of last year will be of much greater value. Prominent architects, engineers and builders have promised to give the classes short talks on interesting subjects, so the entire course should open on the evening of October 2d, and will continue for four months, at the Y. M. C. A., 318 West Fifty-seventh Street.

The entire course is to be under the direction of Mr. L. E. Jallade, architect, and he has engaged as assistants the following:

Charles E. Hume, General Building, of Alfred Beinhauer, Builder.

Joseph W. Cody, Excavating and Shoring, Ex-Emergency Chief of the N. Y. Building Dept.

Charles E. Stanton, Sheet Metal Work, with A. J. Ellis Company.

Louis Kreis, Cut Stone, with John R. Smith's Son.

Edward Raque, C. E., Steel, with Post & McCord.

Jacob M. Kraft, Plaster, with McNulty Bros.

Alfred W. Morris, Carpentry, with Robert Kellough & Co.

J. F. Burrowes, Ornamental Iron, with J. B. & J. M. Cornell.

Charles R. Ten Eyck, Terra Cotta, with N. Y. Architectural Terra Cotta Company.

John Dalglish, Hardware, with Yale & Towne.

Henry H. Ritter, M. E., Heating, with Francis Bros. & Jellett, Inc.

J. R. Shields, Electric, with Francis Bros. & Jellett, Inc.

Groups for other work will be formed as requested.

A drafting class will meet the needs of men who desire instruction in drafting. This will not be an Architectural School, but is to enable men to present their ideas on paper in a rapid way. This class will be in charge of Mr. L. P. Hutton, Architect.

OCTOBER 10, 1905

Editorial Trade Review

The skies of commercial activity were never brighter, universally so throughout the country in every section. Not a single indication that interferes with the harmony of a prosperous prosecution of a successful business, and the greatest health, commercially speaking, is given to the agriculturist, who, within a memory not too far back, was usually sympathized with as the under dog in the fight. He has emerged from such an unsatisfactory atmosphere and to-day is the fountain head of successful endeavor, and the banks are receiving the wealth they were wont to distribute. The wheat crop of the country is full of promise; the corn crop is a phenomenal one; the cotton crop—with Japan full of peaceful ideas again a welcome buyer—will be as satisfactory as could be expected at prices that will make up for past deficiencies.

Trade reports for September in the Hardware markets of the country were of a record character, and opened the Fall trade with promise of better still to arrive later. October, so far as heard from, continues in the same strain, with the finest weather conditions, every section of the country is doing its best. The tone of the market is exceedingly strong, and advancing prices on leading lines point significantly to future advantage. The present strength of the iron market is felt by all the manufacturers who use this raw material extensively, and where it has not created a higher priced market on general goods will surely be found so in the immediate future.

The new advance of $1.00 a ton in wire products, came in the nature of a surprise to most of the trade before they had recovered from the previous advance. The producers are now fortified in the several divisions of the country and prices may be relied upon in prospective dealings. The market is a large one in volume; though the price affects the whole field of wire products, the principal manufacturer is able to control the market and keep it in a healthful condition. The advance exerts an influence on the general market acceptably, for it inspires the dealer with confidence in other purchases in which the advancing tendency is noticeable.

Builders' Hardware is still in good demand, and the deliveries of it less restricted; there has rarely been seen a season where the jobbers have had such demands made upon their stock from almost every trade centre and the manufacturer has seen the necessity of keeping his forces actively employed to supply the increasing demands.

Collections have been commendable, especially so at this time, when the banking facilities are relied upon to a greater or less extent for the crop movement. Conditions South have greatly improved. The price of cotton is a satisfactory one, and the people only hope it will "stand pat."

The wealth and wants of the country emanate from the agriculturist, who, by his increasing prosperity, is counted upon to enhance the products and increase our commerce to a degree of interest that is dwelt upon by all nations not similarly benefited.

Improvements follow the acquisition of wealth by the farmer, and he adds to his facilities by the expenditure of his money immediately, and there is plenty of it available for that purpose. As his experience has not been of a kind to make reckless spending possible, it will be found steady and reliable enough, but continuous.

PROTEST AGAINST P. O. ORDER.

The trade protested to such an extent against the legal enactment of the Fourth Assistant Postmaster-General, ordering local Postmasters to number the boxes on the rural routes in their neighborhood and to deliver mail that should be addressed by number only, that the enforcement of the order has been suspended to await the higher authority of Postmaster-General Cortelyou.

The part of the order that was not objected to instructed local Postmasters to assign a number to each one of the boxes on the several routes leading from their respective Post Offices. There was nothing in that part of the order that could be criticized, but to deliver them as laid out to number only, and not designate the same by name, was strenuously objected to; for that would cause a wholesale distribution of catalogue house stationery to these boxes under the form of law.

It seems as though an order so liberal could only have been dictated to by the very wants of the catalogue houses; that the Government in this way apparently fostered and encouraged. The overwhelming objection urged against any such action as was contemplated in the promulgation of this order, will enlighten the Postmaster-General sufficiently, for him to abrogate permanently that part, which in view of all the dealers who are opposed to catalogue house methods, was detrimental to the interests of all concerned except the few houses that were thus made Government beneficiaries under the act.

The part suspended of the original order we quote as follows: "Referring to the Department's recent order regarding the numbering of rural mail boxes, you are informed that that portion of the order authorizing the delivery by rural carriers of ordinary mail matter of all classes, addressed to such boxes by number alone, was hereby suspended."

The mail order houses are said to have acted promptly on the benefits to be desired from this action of the Government, through the assistance given them by the Fourth Assistant Postmaster-General. Already were the requests made to local Postmasters for a list of the number of boxes on each route and the number of routes; and these being obtainable if the order had not been modified, they would have prepared to profit by the mistake of the Department, and the country flooded with their 1,000-page catalogues "just off the press."

TRAFFIC MOVEMENTS ON THE GREAT LAKES.

On the Great Lakes traffic movements were of heavy volume during August, receipts for the month amounting to 9,501,759 tons, as against 8,894,280 tons in 1904 and 8,407,754 tons in 1903. Shipments, which totaled 9,435,179 tons during the eight months of the current year, were composed of the following items: 137,244 net tons of flour, 17,217,120 bushels of grain and flaxseed, 2,155,913 net tons of coal, 4,884,213 net tons of ore and minerals, 249,072 M feet of logs and lumber, and 705,061 net tons of unclassified freight. During the first eight months of the current year shipments from various points on the Great Lakes totaled 40,540,912 tons, while a similar movement in 1904 amounted to 24,857,888 tons, and in 1903 to 36,711,827 tons. The great increase shown for the present year, as compared with that for 1904, was due, at least to a large extent, to an earlier opening of navigation and freedom from labor difficulties.

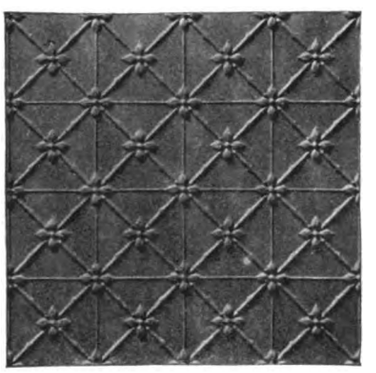
PROFIT MAKING LINES

METAL CEILINGS, SIDE WALLS, ETC.



In considering the many lines that are handled by the regular Hardware dealers and general stores, from a profit making basis, there is found a very wide range of profit on the different lines handled, some showing a good, wholesome profit that has to go a long way in helping out the expense account and in dragging along other lines of old staple goods that are necessary to have in stock, but hardly worth the space they take from a profit making standpoint, and the busy man is constantly on the alert for new lines that will pay a satisfactory profit, and at the same time draw

a new class of customers to his store. With this idea in view he should look to the different kinds of business that are showing the most remarkable growth, and we are sure that the Metal Ceiling Business could not be overlooked. These goods are being handled very extensively in all quarters of the world, and there are certain classes of these goods that would pay very

handsomely for all Hardware and general store dealers to carry in stock; such patterns as could be used for ceiling or side walls of interiors, where yellow pine or plaster are used, would be very quick selling and would occupy small space as it would nest together very compactly. Three or four of such patterns as are here illustrated could be kept in stock, and purchaser would find that they would save time and labor in applying them over the yellow pine sheathing or plaster. The construction of these patterns is so simple that anybody could apply them, and they would make a very satisfactory interior finish, with every advantage over other forms of ceilings and none of the disadvantages. They are practically dust-proof, fire-proof, sanitary, and durable, and can be renewed with a coat of fresh paint at small expense, without it being necessary to cut out cracks and replaster as is found such a nuisance in decorating plaster ceilings or walls. By

handling this class of goods it would steadily lead into a business for the more elaborate ceilings showing cornice, false beams, and paneled effects suitable for larger rooms, such as stores, school-rooms, churches, theatres, and buildings of all classes. The manufacturers of these goods, Northrop, Coburn & Dodge Co., are always pleased to furnish sketches or estimates, and

would quote trade discount to such parties as would consider carrying a stock, besides giving them some protection for the sale of the goods in their vicinity. Catalogues and booklets would also be furnished, and we believe this line is worth the consideration of all enterprising Hardware dealers.

THE PECK, STOW AND WILCOX COMPANY'S CATALOGUE.

The Peck, Stow and Wilcox Co., Southington, Conn., and 27 Murray Street, New York, have just issued a new edition of their catalogue and price list of Tinsmiths' Tools and Machines, Hardware and Mechanics' Tools, showing in detail the very many styles, patterns and sizes of goods manufactured at its various factories. In general appearance it is like the company's previous catalogue, but is a more ambitious one than any preceding, being cloth bound, and having 456 pages, each 10¼x7½ inches, and printed on good paper. They state in their prefatorial remarks that they have "endeavored to condense in the smallest space possible such information as the buyer seeks in consulting its pages, and to bring together in appropriate groups their various classes of goods produced in their several factories." The goods illustrated and described are a general line of Hardware, including mechanics' tools, house furnishing goods and Tinsmiths' tools and machines—the company having made them since 1828 under the present organization or its predecessors—and are well known as manufacturing the most complete line needed by the trade. Standard lists have been kept, but where changes have been necessary in other lists they have been adopted. A radical change has been made in Discount Sheet No. 1, issued with the book under date of August 1. In addition to this general catalogue of articles manufactured by them, they issue a number of supplementary lists embracing goods in special or distinct lines. They are making a large and attractive line of Locks, knobs, door sets, etc., which are described and illustrated in a special list. To this list they are constantly adding new patterns and designs. They also issue a special list of Stationery Goods, such as ink stands, paper files, paper clips, etc. The large line of Mechanics' tools which they manufacture is combined and illustrated in a separate list known as their Tool Catalogue. They also issue a special list of Fireplace Goods, such as andirons, fire dogs, fire sets, stove pokers and shovels. This catalogue contains full and complete illustrations of their celebrated Berlin Black Goods. They also issue a complete list of Tinners' tools and machines, which is their Standard list, the pages of which correspond with this catalogue under review. Where any difference in description or prices is found this tinners' tool catalogue will be considered correct. It will be known as the "Twentieth Century" edition, and will bear the same date as the general catalogue.

LEGAL CORRESPONDENCE.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Law Editor "HARDWARE," No. 309 Broadway, New York City.

UNAUTHORIZED USE OF WORDS "AND CO." A MISDEMEANOR.

Question: I want to carry on my business under a firm name. Is there any reason why I should not add "and Co." to my name? Some say that I cannot legally do so.

Reply: In the absence of a positive statute on the subject, there is no reason why you may not attach the words "and Co." to your name. But in New York and many States, statutes have been enacted to the effect that any person who transacts business using the name as partner of one not interested with him as partner, or using the designation "and Co." when no actual partner or partners are represented thereby, is guilty of a misdemeanor.

FIXTURES—PRIORITY BETWEEN CHATTEL MORTGAGE AND MORTGAGE OF BUILDING.

Question: "A" sells "B" a furnace and boiler to be installed in a house which "B" is building. "B" agrees to pay in installments and contracts that the title shall remain in "A" until the furnace is paid for. A building loan mortgage is then put on the house and its fixtures, which is now being foreclosed. The mortgagee of the house claims the furnace under his mortgage on the ground that he did not know of the agreement between "A" and "B." The furnace has not been paid for. Who owns the furnace?

Reply: It depends upon the State in which the property is situated. In New York it is held that the agreement between "A" and "B" should prevail and that the furnace would remain personal property and would not be bound by the mortgage of the real estate. (Tift v. Horton, 53 N. Y. 377.) But in other States, such as Massachusetts and New Jersey, it is settled that the real estate mortgage has priority, particularly where, as here, the mortgagee of the realty presumably advanced his money, believing that all the fixtures were covered by his mortgage, and without knowledge of the secret agreement between "A" and "B."

STREET RAILWAY COMPANY—LIABLE FOR CONDUCTOR'S ABUSIVE LANGUAGE.

Question: Please give your opinion on these facts: A lady boarded a street car and gave the conductor a quarter of a dollar from which to take her fare. He did not return the change, and when she asked him for it he became abusive, refused to pay it and insulted her by calling her a dead beat and a swindler, even after another passenger had informed him that she had given him the amount she claimed. Would you advise suit against the railroad company under such circumstances?

Reply: We think that the facts stated show a breach of the duty of the street railway company to its passengers. It was the duty of the company to receive any coin permitted to be tendered for fare under its rules and regulations and return the change to the passenger. It was also the duty of the company to carry the passenger safely and properly and protect her from insult, violent conduct of other passengers, of strangers or of its own employees. We think this duty was violated in this case and the passenger is entitled to be compensated for the humiliation and injury to her feelings which she suffered by reason of the insulting and abusive treatment she received.

ADVERTISING TO HOLD LOCAL TRADE.

Louis G. Quackinbush, in *The Advertising World*, speaking of the advertising done by local dealers, has this to say about advertising for the purpose of interesting the farmer and keeping him within the fold of home trade.

"Little is to be gained by any mode of attack that directly endeavors to undermine the mail-order houses in public estimation. Recourse must be had to subtler, more diplomatic methods. I go so far, in fact, as to believe that it is unwise for a merchant, by word or deed, in his advertising or otherwise, to give the slightest hint that he recognizes the competition of the mail-order houses. The merchant should stand squarely on his own feet. His endeavor should be to show, not why it is unwise to trade with somebody else, but why it is wise to trade with him. Much valuable space is wasted, and worse than wasted, by inexperienced advertisers in jibes at competitors—tacit detractions—that harm the detractor more than they do any one else. My advice to merchants who have suffered serious loss of trade through the work of mail-order houses is to utterly abandon the idea of "getting back at them" in newspaper ads, and by word of mouth, and to strive instead to strenghten their own individual means of getting in close touch with the country trade. I advocate, for the winning back of country trade that has been lost, a strong campaign of direct advertising through the mails. I am becoming continually more and more convinced that to get hold of the country trade, newspaper advertising has not the force of circular letters, special circulars describing, attractive offerings in an attractive way, well written and interesting store papers, or other forms of advertising literature sent direct through a good mailing list. For securing and holding the trade in one's own home town—that is to say, city or village trade—the newspaper is indispensable. But I greatly question if the farming classes are much swayed by newspaper advertising of the sort done by the average retail store in the average country weekly. Again, the extension of the rural free delivery system is causing city dailies to be extensively taken in rural districts where the country weekly formerly reigned supreme; and the influence of the latter is being continually diminished. Bearing these facts in mind, I strongly believe that the merchant who wants to win back the farming trade had best lay out his money in literature of his own rather than in the columns of the country newspaper. I have great confidence in strong, persuasive, forceful, personal letters, sent out from time to time to a selected list of rural residents within convenient distance of your store. I have greater confidence still in the sending out of bulletins of really attractive prices on seasonable necessities. And I have most confidence of all in a good monthly store paper (not necessarily pretentious or costly) which combines the friendly familiar talk about the store fixtures and store service with the descriptions of goods and details of prices which families in the country are never too busy to read.

"The only appeal which counts for anything in securing farming trade is the appeal to the farmer's self-interest. He must be led; for he cannot be driven. If you make much of the mail-order bugaboo, you alienate him almost infallibly. The only way to secure his interest and respect is to "boost" your own trade in a strong, fair, manly way, without knocking anybody else's; and to make him believe that it is to his own interest to patronize you. To that end, every letter or other piece of literature you send to him must possess full sincerity and earnestness. It must not have the hollow ring of insincerity or he will instantly detect it. Straight-forward, plain, flat-footed arguments will count in the long run. Don't attack the mail-order houses. Pay no attention to them in any way, shape or form. Go after the farming trade as if yours was the only store at which any wise and astute buyer could possibly think of supplying his or her wants. The whole world bevieves in the man who believes in himself.

FEWER FAILURES REPORTED.

Commercial failures in the United States during the first nine months of the calander year 1905, according to reports from branch offices of R. G. Dun & Co., were 8,860 in number and $76,234,028 in amount of liabilities, against 9,183 insolvencies in the corresponding months of last year, when the defaulted indebtedness aggregated $111,659,205. In manufacturing occupations there were 2,040 failures for $32,783,285 compared with 2,099 last year when the liabilities were $38,769,016. Trading defaults were 6,531 in number and $38,614,237 in amount, against 6,728 for $49,127,935 in 1904. All other commercial failures not properly included in the two chief classes, such as brokerage, insurance, real estate, etc., were 235 in number and $4,836,506 in amount; comparing with 356 defaults involving $23,762,254 a year ago. In addition there were 63 suspensions of banking and other fiduciary concerns, with an aggregate indebtedness of $12,072,406, against 76 for $20,810 in the same nine months of 1904.

CULTIVATE THE SELLING FACULTY.

How many clerks ever really sell any goods? We don't mean handing out what a customer calls for and taking his money for it. Almost any one can do that. That isn't selling; it's merely delivering something your customer has already sold to himself.

Try the effect of a concerted effort for one week on the part of your sales force to sell something. Take a single line—something that is seasonable and that people may be reasonably expected to want at this time of the year—Screen Doors, Hammocks, Refrigerators—make your own selection.

Post yourself thoroughly on the merits of the goods you decide to push. Find out what points of superiority they have. Study out the best way to present their advantages to a possible buyer. Get enthusiastic about them.

Then see that your sales force gets this information. If necessary, give them a little training. Get one of them to sell you the article in question. Raise some objection and find out how good a salesman he really is. Give your clerks all the information and help you possibly can.

Make the line you have selected the subject of your advertising

SEWING MACHINES AND HARDWARE DEALERS, No. 2

The sewing machine situation in the United States at the present time presents features of peculiar interest. On the one hand, we still have what we might call the "old line" companies who apparently have not yet outgrown the old ideas of business which are characterized by their prices as well as their cumbersome and expensive system of handling the business. High priced solicitors, inumerable branch offices, conducted under large expense, installing methods necessitating an expensive system of bookkeeping, collectors and heavy losses from bad accounts, etc., etc.

Of course, the expense of these features is thoroughly covered in their selling price which, when the sewing machine becomes the property of the user, represents two or three times the cost at which the machine might have been owned by him.

The customer has simply bought the name which, when patents were alive, was good enough to cling to, but which has lost all significance with the expiration of these patents making the sewing machine a simple article of commerce the cost of which should represent nothing but the cost of the material, the labor and the manufacturers' reasonable percentage of profit added. The extravagant prices charged for certain sewing machines have nothing to do with their quality or the cost of making them. The necessary selling expenditures are added to the price without improving the quality of the machine in the slightest regard.

There are still some people who are willing to pay an extra price as a premium for the sake of a fashionable name but there are fewer of these people than formerly. At the present time, the great majority of thoughtful people who purchase a sewing machine care more for its actual merits and working qualities than for its name. They are perfectly willing to pay for quality but for quality only.

On the other hand, we have the other extreme of merchandising. The large city stores or catalogue houses flooding the market with machines of questionable origin, manufactured solely at a price to attract bargain hunters without any regard to quality or mechanical workmanship and when the hapless customer finds his machine out of order after the first few attempts at sewing with no expert mechanic to make the elsewhere guaranteed repairs except at a heavy cost, he finds that he has bought a price instead of a machine and the bargain usually turns out to be a most expensive and most irritating investment.

Here steps in as a happy mean, the jobber who produces the sewing machine and places it on the market at its actual commercial value through the time honored method of the Hardware dealer on the ground, and the sewing machines sold to the Hardware dealer at a close jobbers' margin are machines that combine *quality, standard features* and *popular price*...In buying them you buy neither a name nor a price, but obtain from the jobber all the quality features of an old time name and at a price which does not compel him to deceive you in quality. Behind it all stands the manufacturers' guarantee on which again is placed the jobbers' own guarantee making a doubly binding warrantee.

One of the ablest Hardware men now in the trade with an experience of thirty odd years in the business and who has been handling sewing machines for the last twelve or fifteen years, when asked to diagnose the catalogue house competition and to express an opinion as to how it might best be met, gave his views as follows:

"Catalogue house competition can best be met by using their own goods to fight them off. Let the Hardware dealer who is worried by catalogue house machines and prices send to the catalogue house and get one of their cheap machines and place it on sale 25 cents less than the catalogue house's advertised price. Thus, if the list price on a certain catalogue machine is $8.75, let his price be $8.50. He must let it be known throughout his territory that people need not send their money away to Chicago or elsewhere for this machine as he will supply the identical machine at his store for 25 cents less than the advertised price of the catalogue house. If he will advertise this information to all the people in the territory from which he draws his trade, it is a pretty safe proposition that any person who contemplated buying one of these machines will go to him to get it at a saving in price and freight, thus placing the dealer in the same position as the catalogue house when it is trying to swing a customer to a higher priced machine only that his position will be far stronger, even, for he gets that customer face to face with the catalogue house machine and shows it to him along side of his own superior machines, the chances are that the customer will not want the catalogue machine at any price and the odds are big that the dealer will be able to sell him one of his own machines. If, however, the customer must have the catalogue house machine, let him have it with a good grace but tell him that if at any time within thirty or sixty days, he is not satisfied with the catalogue house machine, he may return it and you will allow him exactly what he paid for it and let him have one of your better machines. This plan has been used with marked success and has not only increased the dealers' sewing machine trade but has practically wiped out the catalogue house competition in his particular section."

The popular claim of the old line companies that they own patents which make the mechanical construction of their machine superior to any other is unfair. Sewing Machines have been before the public so long that the important patents are all common property; therefore like Bicycles, they are very much alike in all essential features. To-day, the up to date manufacturer of sewing machines is the one who uses the principles which have survived the test of experience and has incorporated into his machines from time to time, tried improvements of merit among which may be especially mentioned the drophead feature which has added so greatly to the popularity of the sewing machine of to-day.

The sewing machine handled by the jobber and by him distributed to the Hardware dealer, are so simple in their construction and principles are so well understood that it is not necessary to follow the sale up with a teacher to give instructions how to run the machine nor with an expert mechanic to keep the machine in repair. All the operator needs to know is how to thread the machine and how to put work under the foot—the machine will do the rest.

In distributing sewing machines, the jobber offers to the retail Hardware of all sections of the country, a household necessity on which he can make a larger margin of profit than can be made on any other single specialty and fortunate indeed is the dealer who grasps the opportunity at once realizing that the margin will be greater in this line in the near future than later, when competition has greatly increased.

G. H. Dirhold.

St. Louis, Mo.

---

for that week. Display it prominently. Advertise it in your local paper or whatever medium you use. Concentrate your efforts on this one line.

Instruct your clerks to see that no one enters your store without having his or her attention called to these particular goods. Talk to every chance buyer about them. Don't wait for your customers to buy—see if you can't sell them something.

Next week, concentrate your efforts in the same way on some other line. You will be surprised at the results. You cannot fail to make dozens of sales which would not have been made without this persistant effort.

The problem of making money in business is largely the problem of making sales. Other things being equal, the merchant who sells the most goods will make the most money. This is the end toward which your time and money should be directed.

What is needed in business is ideas. Good ideas, properly followed up, will do more than the hardest kind of work which is misdirected. Find out the best way to sell goods and put your energies into that.

By relying on salemen, rather than cut prices, by polite and attentive service, by keeping your store clean and attractive, by concentrating your efforts on the task of making sure that all your customers are supplied with everything in your line which they could possibly want, you can hardly fail to increase your profits materially.

The most successful merchants are those who realize the value of this principle. If you are not already working along these lines it's time to "get busy."—*Hardware Hints.*

MANIFEST ERROR.

Molly—He is a student at one of the big colleges.

Polly—Nonsense! He talked with us for an hour when he was here yesterday and never used a bit of slang.—*Somerville Journal.*

Legal Matters

OF INTEREST TO HARDWAREMEN

AGENCY—PAYMENT OF MONEY—AUTHORITY.

In the case of Held, Trading as Brooklyn Vault Light Company, vs. Walker, recently decided by the Court of Appeals of the District of Columbia, the question was raised whether the defendant was justified in making payment to an agent who failed to turn over the money to his principal, the plaintiff. It appeared that the plaintiff appointed the person collecting the money to the conduct of an apparently general office, supplied him with stationery upon which his name appeared as agent, and placed in his hands for presentation to the defendant the bill of which he received the payment. The court held that these facts did not constitute conclusive evidence of a general agency justifying the payment of money to the person holding such agency, but raised a question for the jury, and that the trial court erred in directing a verdict for the defendant.

DRAFT—FORGERY—RECOVERY—MISTAKE.

The Supreme Court of Arkansas held, in the case of La Fayette vs. Merchants' Bank, that the drawee of a draft upon which the indorsement of the payee and his signature to a bill of sale on the back, which is the consideration of the acceptance of the instrument, are forged, who pays it in ignorance of the forgery upon its presentation, bearing the indorsement of the collecting bank, is entitled to recover the proceeds from the bank as money paid under mistake.

BANK—CHECK—PAYMENT—DRAWER.

The Supreme Court of Tennessee held, in the case of Pease & Dwyer Company vs. State National Bank, that under section 189 of the Negotiable Instruments law, providing that a check is not an assignment of any part of the drawer's funds, and that the bank is not liable to the holder until it accepts or certifies the check, the drawer of an ordinary check may, before it is accepted, revoke it and forbid its payment, and that any subsequent payment is made by the bank at its peril. The court further held that in order to place a check beyond the control of the drawer and preclude him from stopping payment thereon, it must be clearly shown that it was the intention of the parties to assign all or a part of the specific fund on deposit, and that the bringing of suit by the drawer of a check against the payee to recover the sum for which it was drawn was not a ratification by him of the act of the bank in paying the check after he had stopped payment thereon.

PARTNERSHIP—GOOD WILL—SURVIVOR.

The Supreme Judicial Court of Massachusetts held, in the case of Hutchinson vs. May, that the sale of the good will of a partnership at the instance of the personal representative of a deceased partner, as part of the firm's assets, did not preclude the surviving partner from entering into a competing business and soliciting trade from the customers of the old firm.

STREET CAR—PASSENGER—NEGLIGENCE.

The Texas Court of Civil Appeals held, in the case of Lewis vs. Houston Electric Company, that when a person desiring to become a passenger on a street car stations himself at a place where the cars are accustomed to receive passengers, and signals or calls to the motorman of an approaching car to stop the car, and such signal is seen by the motorman and the car slows up, an acceptance of the offer to become a passenger will be implied from the act of the motorman, and such person is entitled to be regarded as a passenger while in the act of getting on the car, though he attempts to board the car before it comes to a full stop, and irrespective of whether the motorman intended to stop the car for the purpose of allowing him to get on. The court also held that the attempt of a passenger to board a street car while it is in motion is not contributory negligence as a matter of law.

GREAT INCREASE IN TRADE-MARK REGISTRATION.

The new Bonynges trade-mark law, which went into force on April 1, 1905, has caused an enormous increase in the work of the Patent Office in recording applications. No less than 12,000 applications were filed during the first four months under the new act. Compare this with registrations under previous trade-mark laws and it appears that the increase has been tremendous. The first law was passed in 1870 and was repealed in 1881. In these eleven years only as many applications were filed as in the first four months under the present law. Of course, all applicants for trade-marks do not necessarily secure them, for the reason that many may adopt devices which are not registrable. and some, which might be too much like others, are already registered. Under the first trade-mark law two-thirds of the applicants secured registration. How many under the present law will also be registered cannot at present be ascertained; but as the law is a liberal one, it is assumed that a very large percentage of the applications will be allowed. The second trade-mark law was in force from 1881 to 1905. In those twenty-four years 60,000 applications were received and more than half of them allowed, namely 36,166. Applications under the second law were, therefore, at the rate of 2,500 per annum. It is expected under the present law that the applications will be about eight times as numerous. The Patent Office gives as the principal reason for the very great increase in applications for trade-marks the fact that the law provides for the registration of marks used in interstate commerce, while under the old statutes the trade-mark only applied to commerce with foreign countries and the Indian tribes.

AGRICULTURAL IMPLEMENT AND VEHICLE MANUFACTURERS.

The National Association of Agricultural Implement and Vehicle Manufacturers held their twelfth annual convention at Niagara Falls, September 27, 28 and 29. W. W. Collier, of the American Harrow Co., Detroit, Mich., president of the association, presided.

The report of F. E. Lukens, of Chicago, placed the membership at 373. The receipts for the year were $5,526.29, and disbursements, $4,735.02, leaving a cash balance of $773.27.

The principal feature of the Wednesday afternoon session was an address by Judge Grosscup on "The Solution of the Transportation Problem." His remedy was to have a new department in Washington, or a branch of one of the present departments, that would have nothing else to do but hear complaints, investigating them, and lay their findings before a special court for decision, the court to have no other business. The convention adopted a resolution favoring the suggestion.

The Committee on Patents, P. A. Meyers, of F. E. Meyers & Bro., Ashland, Ohio, chairman, made an interesting report, dealing almost entirely with the new Trade-mark law, which was the only patent legislation enacted since the last convention.

One of the principal addresses made before the convention was that of Dr. Elwood Mead, Chief of Irrigation and Drainage Investigation, United States Department of Agriculture, whose subject was "The Application of Power to Farm Work."

Chicago was selected as the place of the next meeting and new officers were chosen as follows:

President, C. F. Huhlein, B. F. Avery & Sons, Louisville, Ky.

Treasurer, Jos. Dain, Dain Mfg. Company, Ottumwa, Iowa.

Vice-Presidents: C. S. Brantingham, Emerson Mfg. Company, Rockford, Ill.; D. M. Parry, Parry Mfg. Company, Indianapolis, Ind.; Frank Slosson, Bain Wagon Company, Limited, Kenosha, Wis.; William W. Wiard, Syracuse Chilled Plow Company, Syracuse, N. Y.; Duane H. Nash, Millington, N. J.; W. R. Woodden, Nichols & Shepard Company, Battle Creek, Mich.; F. W. Blees, Blees Carriage Company, Macon, Mo.; C. E. Sheldon, Whitman & Barnes Mfg. Company, Akron, Ohio; E. R. Beeman, Monitor Drill Company, Minneapolis, Minn.; A. B. Farquhar, A. B. Farquhar Company, Limited, York, Pa.; C. B. Dempster, Dempster Mill Mfg. Company, Beatrice, Neb.; Wakefield Baker, Benicia Iron Works, Benicia, Cal.

Executive Committee: H. E. Miles, Racine-Sattley Company, Racine, Wis., chairman; W. B. Brinton, Peru Plow & Wheel Company, Peru, Ill.; Newell Sanders, Newell Sanders Plow Company, Chattanooga, Tenn.; F. D. Suydam, Milburn Wagon Company, Toledo, Ohio.

RETAIL HARDWARE, IMPLEMENT & VEHICLE DEALERS' ASSOCIATION, OKLAHOMA CITY, OKLA.

They report being in readiness to commence an active campaign for membership and for more official work immediately, and we hope to hear something interesting from them from time to time. Just at present the thing which interests the association most is the establishment of branch houses of the large manufacturing concerns in Oklahoma City. They have already secured the National Harvester Company, J. R. Case Threshing Machine Company, Reeves & Co., Northwest Thresher Company, the Geiser Manufacturing Company, and the Oklahoma-Moline Plow Company and the Columbus Buggy Company, while the John Deere Plow Company and the Kingman-Moore Implement Company have both purchased ground for the erection of large buildings in the immediate future. Parlin Orendorf, The Rock Island Plow Company, and the Racine-Sattley Implement Company and several others are investigating the proposition with the prospect that the bulk of the large houses will find it necessary to have their branches there before the end of the year 1906. This is recorded as a very good indication of development and prosperity of Oklahoma and Indian Territory, which will be augmented by the early admission into Statehood, which is expected as a result of the next session of Congress.

Trade Meetings

AMERICAN HARDWARE MANUFACTURERS' ASSOCIATION.

The annual meeting of the American Hardware Manufacturers' Association, that will be held at the same date as the National Hardware Association, will have their headquarters at the New Willard, Pennsylvania Avenue and Fourteenth Street. Special rates have been obtained for the delegates and their friends who may desire to be in the same hospitable establishment as the manufacturers, and F. D. Mitchell, the secretary-treasurer of the Manufacturers' Association, requests that any requisitions wanted will be secured early as possible, because it is expected that a larger attendence than usual will be on hand. For such requisitions parties should write the New Willard direct. Secretary Mitchell has recently distributed the following letter to the members of his associations for their guidance and convenience of this occasion:

IDENTIFICATION BADGES.

To the Members of the American Hardware Manufacturers' Association:

Dear Sirs—At the annual meeting of this association, which will be held in Washington, D. C., November 8th, 9th, 10th, concurrent with the annual meeting of the National Hardware Association (Jobbers), a new form of badge will be furnished to such delegates of both associations as have signified their intention of attending the conventions.

These badges will display in attractive medallion form, on celluloid, in plain (Gothic) type, the name of the individual, together with the name and address of the company represented, and by the color of a small ribbon attached will indicate whether the individual is a manufacturer, jobber or some guest of either association.

The use of this identification badge will do away with other badges and number buttons with printed keys, heretofore used, and is designed to be clearly readable at a distance of four feet.

We enclose herewith return-addressed postal form, which kindly use in advising this office the names of the delegates from your company who purpose attending the convention, and for whom identification badges should be made.

We have arranged to have made up at the convention, by the hand-engrossed card inserts, badges for those who decide at the eleventh hour to attend; but in order to secure the celluloid form, it will be necessary to furnish "copy" to the concern manufacturing the badges not later than the 25th instant, and we would suggest the expediency of having all names possible included in the list to be sent on the 16th inst. to this concern, to insure correction of any typographical errors which may develop.

The various passenger associations have granted a one-and-one-third rate for round trip to Washington, D. C., under the certificate plan; wthen purchasing ticket be sure and secure a signed "*certificate*" (not a receipt) from the ticket agent, which, *when vised* by the passenger's association's agent at Washington, will entitle to purchase of return ticket at the one-third rate.

Yours very truly,

F. D. Mitchell,
Secretary-Treasurer.

It is generally supposed by the trade that supreme importance at the combined conventions will be given the Catalogue House Question, the jobbers treating the matter in an exhaustive manner by devoting a large part of their discussions to the settlement of some plan for final action. The jobbers will ask the manufacturers undoubtedly to formulate some plan that can be approved by the convention, which will effectually do away with the present friction in their relations with the trade having reference to this subject. All other matters touched upon in the proceedings will be made subservient to this, which will be handled by the assembly in a manner worthy of the dignified committee having it in charge.

PENNSYLVANIA RETAIL HARDWARE ASSOCIATION.

At a meeting of the Executive Committee of the Pennsylvania Retail Hardware Association, held at Williamsport, Pa., recently a very vigorous stimulus was given to Association work. It was decided among other things to at once employ a solicitor to canvass the State in the interests of the Association, and to include at the same time the Mutual Fire Association. A suitable man has since been secured and is meeting with marked success in his canvass. The officers of the Association are expecting to double their membership during this year. They are now working on the programme for the next convention which meets in Williamsport, and expect to have the most successful meeting in the history of the Association. They have a live corps of officers and an energetic Executive Committee.

THE WHOLESALE AND RETAIL HARDWARE JOINT COMMITTEE.

The members of the Wholesale and Retail Hardware Joint Committee met in St. Louis Monday, Sept. 25 at the Hotel Jefferson, to consider a number of matters which related to their special interest. There was a very large and representative attendance showing the unbounded interest taken in their programme. The General Conference on the succeeding Wednesday and Thursday was called for the purpose of taking united action in regard to the Mail Order and Catalogue House competition and the Parcel Post question as well. The Joint Committee re-elected the former officers for the ensuing year including S. Norvell, St. Louis, Chairman, and T. James Fernley, Philadelphia, and M. L. Corey, Argos, Ind., Secretaries. A new office, that of Vice-Chairman, was created and E. M. Bush, Evansville, Ind., Vice-President of the National Retail Hardware Association, was elected to that position.

The following Committees were appointed, the Chairman of the Joint Committee being an ex-officio member of each Committee.

Sporting Goods—W. P. Bogardus, chairman; S. R. Miles, W. S. Wright, R. A. Kirk.

To Investigate Prices Quoted by Catalogue Houses—M. L. Corey, chairman; R. A. Kirk, E. M. Bush, S. R. Miles, W. S. Wright, C. B. Carter, T. James Fernley.

To Correspond with Manufacturers and Others Selling to Catalogue Houses—T. James Fernley, chairman, M. L. Corey, R. M. Dudley, C. B. Carter, W. S. Wright, R. A. Kirk, W. P. Bogardus, S. A. Bigelow.

To Take Up the Catalogue House Question with Retail Trade—M. L. Corey, chairman; T. Frank Ireland, S. R. Miles.

To Take Up Catalogue House Question with Jobbers—T. James Fernley, chairman; R. A. Kirk, W. S. Wright.

On Press & Publicity—T. James Fernley, chairman, M. L. Corey, C. B. Carter.

To Correspond Through Jobbers with the Retail Trade in the South on the Catalogue House Qufstion—C. B. Carter, chairman, R. M. Dudley, M. L. Corey.

The following summary of the business transactions will convey a pretty general idea that they found business enough to take up.

Telegrams were sent and appreciation expressed for the co-operation received from a large number of manufacturers and telegrams were sent and letters written to a number of manufacturers asking for relief and cooperation on their lines of goods, some of whom are favorable to the cause and others who are not. Consideration was given to the reception of these replies to the fullest extent.

There was action taken regarding the recent order of Fourth-Assistant Postmaster General about numbering rural letter boxes.

A resolution was made to support the Winchester Repeating Arms Company and other manufacturers in their effort to regulate Catalogue House methods.

Action was taken by the secretaries to obtain definite information previous to the Washington Convention, November 8, 9, and 10, regarding the position of certain manufacturers on the Catalogue House Question.

An invitation was read by the President of the National Hardware Association to retail members of the Catalogue House Committee to attend the Washington Convention.

Plans were outlined for discussion of the Catalogue House Question by manufacturers, jobbers and retailers at the Washington Convention of the National Hardware Association.

Action was taken towards interesting associations in all other mercantile lines in the Catalogue House movement.

Attention was called to the numerous advances in prices on many standard goods in recent mail order catalogues issued.

Attention was called to the dropping of many standard manufacturers' brands in recent mail order catalogue.

It was decided to publish soon after the Washington meeting, for distribution to the entire jobbing and retail Hardware trade of the country a pamphlet giving in detail the attitude of every favorable and unfavorable manufacturer and jobber on this question.

Action was taken by the five officers present of the National Retail Hardware Association affirming the resolution of the National Association at its last convention at Indianapolis endorsing the work of the Catalogue House Committee and recommending the retail Hardware merchants of the country to show their appreciation of the support they have received from manufactur-

Digitized by Google

ers and jobbers by giving such manufacturers and jobbers preference in the buying of their goods.

Appreciation was expressed of the fair treatment received generally from the trade press of the country in the discussion of the Catalogue House Question.

Endorsement was made of articles that have appeared on the Catalogue House question in the bulletin of the National Retail Hardware Association.

Discussion was had of the indirect sources of supply of Catalogue Houses on certain lines of goods.

Believing that questions such as this can be successfully handled only by associated effort, it was strongly urged that all jobbers and retail merchants join the Association and work with them.

The Committee deprecated the fact that the private-brand question should have been injected into the Catalogue House discussion by those who are unfriendly to the movement.

The Committee endorsed the pamphlet prepared by the Southern Hardware Jobbers' Association on the Catalogue House Question to be distributed among the Southern Hardware trade, and also endorsed the work in progress in uniting the efforts of associations in every line of mercantile business on the same question.

There was an expression of appreciation at the large attendance and the interest and enthusiasm shown by the secretaries of the various associations attending the Secretaries' meeting at St. Louis.

Action was taken with a view to securing more active cooperation by the traveling salesmen in all lines interested in this movement.

The difference between the active and successful efforts of a large number of manufacturers and jobbers in this movement and the passive and ineffectual ecquiescence of some others who have pledged their support, was dwelt upon with emphasis.

It was decided that the official year of the Wholesale and Retail Hardware Joint Committee will expire the first Monday in July of each year.

In closing this session of the Joint Committee it was noted with pleasure that perfect harmony existed and unity of purpose was everywhere visible in everyone in the ranks. The feeling was that the work of this Committee had led to a much closer drawing together of the Jobbing and retail Hardware interests of the country.

IOWA HARDWARE MUTUAL INSURANCE ASSOCIATION.

If you are not a policy holder perhaps you have forgotten what the Iowa Hardware people are doing. In 1903 they organized an insurance company to get insurance at cost and hold the rates down on their Stock Co. Policies. They get fair adjustments in case of loss, demonstrate that Hardware Stocks have been paying excessive rates of insurance, demonstrate the value of association work, and they have written $1,150,000.00 of insurance. They are paying cash rebates of 25%, but expect to pay a larger rebate on the business now being placed on the books. To this date they have saved their policy holders more than $4,000.00 on their premiums paid. Address A. R. Sale, Secretary, Mason City, Iowa.

THE SAN FRANCISCO TRADE.

Brilliant trade conditions reported of late still continue. Farmers' staples are showing more tendency to fluctuate than for some time. Raw wool is held so high by the growers that buyers are withdrawing from the market. Hops have steadily declined during the past fortnight and are now lower than for weeks past. Provisions, too, have gone down. Per contra, the dry goods trade is so active that reports say it is difficult to satisfy all the orders now being received. Canned fruits and vegetables are well cleaned up throughout the coast and the demand continues brisk. The market for dried fruits of all kinds is scantily supplied and very stiff, with prices high, and the market has not been in such fine condition for years. Dairy products and groceries are also in quick demand as a rule, with the merchants, manufacturers and farmers satisfied with current conditions.

California is interested in the proposition to expend several millions in maintaining in New York City a permanent world's fair. This State pioneered the way for it in the permanent exhibit of resources in the museum of the State Board of Trade. That exhibit, which is visited by an average of 10,000 people per month, is to this State, its people, its capacities, what the New York exhibit will be to the world. In the permanent exhibit in New York this State wants to figure in great splendor. When latitudes wide apart and longitudes that have the world's great bulk between them show in New York the products nourished by their far-apart physical conditions, California can show the same as exotics, finding in her soil and climate conditions as congenial as those of their natural habitat. This is the one great fact which this State desires to impress upon the world.

The old site of the Osborn Hardware and Tool Company in the seven hundred block of Market Street, the finest retail location in the city, changed hands this week for $500,000. This is somewhat over $10,000 a front foot, the highest price ever paid for property in San Francisco. The improvement on it is a one-story, frame, no-account building.

The Occidental and Oriental Steamship Company's liner, Doric, left port last week with a large quantity of machinery for Japan. Some single pieces weighed ten tons. The shipment of machinery to Japan has been very heavy for some time and future shipments promise to be even more extensive. The Manchuria, which followed the Doric this week, carried William Jennings Bryan and family and ten locomotive boilers, each weighing fifteen tons, and one of the largest shipments of manufactured steel and iron ever shipped from this port.

A. C. Rulofson was a principal in the organization this week of San Francisco Engineering Club, for education and fraternalization of its members. Builders and consulting and constructing engineers are eligible to membership.

Secretary of War Taft and party arrived yesterday, September 27, from the Philippines and ports in the Orient. Congressman Charles H. Grosvenor, the veteran statesman from Ohio, is one of the party. In an interview last night this gentleman said: "The great opportunities for the growing of hemp impressed me more than anything else we saw on this great trip. There are wonderful things to be done with this product in the Philippines during the next few years. Hemp is a natural monopoly in general, but here I saw great fields of it. Many acres of this green product waved sturdily in the soft breezes, and the vigorous growth I saw there promised good things for us in the future. The soil seems naturally adapted to the growth of hemp and the climate is especially propitious for its cultivation. With advanced American methods, I look for this to become the most valuable export of this great country. There is, of course, plenty of rice and tobacco everywhere, yet I do not believe that these products will be shipped to the United States in great quantities. China and Japan are the natural ports for the Philippine Islands, and these two products will find a quick sale there, even with increased production. But not so with hemp. The United States is the market for it, and to the United States ports it will be shipped."

The immense job of moving the colossal plant of the Pacific Hardware & Steel Company is ended, and it is now in its new three-story building at Townsend, Seventh and King Streets. In its new quarters it is by far the largest Hardware establishment in the West and one of the most complete in the United States. The main building has a frontage of 275 feet on Townsend and King Streets, and 264 feet on Seventh Street, making this the most extensive of any business structure west of the Mississippi River. In the downtown building vacated an extensive salesroom is being fitted up, and between here and the new site, a mile away, an automobile half-hour line is being conducted for the purpose of showing customers the new home of the plant.

One of the mammoth sky-scrapers now rising in San Francisco is the Monadnock Building, adjoining the Palace Hotel. The Palace Hardware Company will furnish this great structure with P. & F. Corbin finishing Hardware.

The Paraffine Paint Co., of San Francisco, is building a $100,000 addition to its plant in West Berkeley. The company will manufacture felt in connection with enlarging its capacity for turning out paints and building paper.

The Union Hardware & Metal Co., of Los Angeles, Cal., are erecting a four-story wholesale Hardware house, 170x218 feet. They are also erecting a warehouse 150x218 feet. It is proposed to have trackage inside of this warehouse for the loading and unloading of cars.

The Seattle Steel Company has moved its plant from Lake View to Humphrey, Wash., and has much enlarged it. E. M. Wilson is now president and general manager; William Pigot, vice-president and treasurer, and W. S. Burt, secretary. The company manufactures bar iron, light rails and fastenings and structural iron and steel, including a large assortment of iron and steel plates, and finds a ready market for its products. The plant regularly employs about 150 men, and uses scrap iron and steel only in its manufacture, the supply of scrap having been found adequate so far for its needs.

INDUSTRIAL PRESS ASSOCIATION.

KNEW HER.

Kate—Millie says Jack tried to kiss her and she called him down hard! Do you believe it?

Tom—I believe that he tried to kiss her, yes.—*Detroit Free Press.*

OUR BRITISH LETTER.

(From our Special Correspondent.)

London, Sept. 28.

THE PRESENT POSITION OF IRONMONGERS' ASSOCIATIONS.

The position of ironmongers' associations is now being reviewed by many ironmongers, both associated and unassociated. It is felt that there is scarcely sufficient life and energy among branch associations, and well wishers of the movement are afraid that association work is becoming stereotyped and that but few new subjects are being introduced for discussion and that the majority of associations are content to deal only with those questions which have already occupied their attention. There is a feeling abroad that a number of new associations could be formed and present associations strengthened if a better record could be given and more permanent benefits assured to would-be members. The president of the Ironmongers' Federated Association has just issued a circular letter to the secretaries of local associations naming several of the old subjects as suitable for discussion during the coming Autumn and Winter, and has invited correspondence from branch associations in order that any further matters which may be brought under his notice can be discussed at the next meeting of the Central Board. The London Ironmongers' Association, who hold their next meeting shortly, intend to bring forward the question of an extended mission scheme, and will review the present position of associations with a view of organizing some scheme of visiting towns where ironmongers are not yet associated and of doing something to further on the work. Personal canvass appears to be the only way by which ironmongers can be brought to regard associations in their true light. It is difficult in England, as also in the United States, to point to direct benefits, and ironmongers, unfortunately, are reluctant to pay subscriptions or give time without being assured of some equivalent personal benefit, although it may be quite evident that in the aggregate benefit has accrued in the past and will do so still more in the future, and, therefore, some will benefit directly, but all will benefit indirectly. Manufacturers are quite ready to recognize that association is a power which must be dealt with gently, and its warnings regarded. Such questions as price maintenance and direct trading cannot be overlooked, and the requirements of associations in these matters must not be lightly treated.

ASSISTANTS' ASSOCIATIONS.

In previous letters I have referred to the progressive action of Liverpool ironmongers and assistants and to the honor which belongs to that town of forming the first ironmongers' assistants' association. The Association, which has been in existence some little time, has had a successful career, sufficient to show assistants in other towns that combination on the part of ironmongers' assistants is not only possible, but practicable, and that the benefits arising from such combination are beneficial; further, many ironmongers in Liverpool who are employers of some of the associated assistants are quite ready to admit that the formation of an association on the lines of the one in Liverpool is in no way detrimental to the interest of employers, but, rather to the contrary. By association assistants are enabled to take a broader view of trade questions, and to recognize that their best interests lie in becoming more efficient in trade matters and in gaining greater knowledge of the Hardware trade. Some excellent papers have been read before the association, and a good deal of native talent and ability has been called forth in consequence. During the past few weeks many letters have appeared in British trade journals urging the extension of the present scheme and advocating not only the formation of branch associations in other parts of the country, but the creation of a National Assistants' Association, in which the membership should be general, and assistants residing in the most isolated districts could reap the same benefits as their more favored brethren in towns. This question has now been taken up seriously by the Liverpool Assistants' Association, and at the last meeting of that body a resolution to the effect that the Liverpool Association should undertake the formation of a National Association of Ironmongers' Assistants provided that a sufficient number of assistants responded to the call. The secretary of this association, R. G. Fleming, of 29 Dale Street, Liverpool, is very enthusiastic about the success of the undertaking.

HEADWAY IN THE GAS STOVE TRADE.

Ironmongers are now making some headway in the gas stove trade and there are indications that at least some portion of the business which they formerly lost in consequence of the gas companies adopting the hiring-out system may be regained. Just recently a draft agreement has been drawn up between the Croydon Gas Company and the local ironmongers' association in that town, by which the gas company make provision for accepting ironmongers as accredited agents for the sale of gas stoves and cookers, also allowing certain commission on the introduction of new customers who are willing to use stoves on the hire or hire-purchase systems. There are many favorable clauses in the agreement by which ironmongers will benefit, and it cannot be overlooked that in addition to direct results from such agencies ironmongers are placed in a better position to obtain work, sell gas-fittings, and secure business for gas cooking sundries and kitchen accessories than they would otherwise be provided if the whole of the gas stove trade was negotiated directly by the gas company. The officials of the I. F. A. regard the position as hopeful, and are assured that what has been done in this one instance may be done in many parts of England; there is, therefore, some prospect of this restoration of the gas stove trade being accomplished in many parts of the country.

THE IRON AND STEEL INSTITUTE.

The Autumnal meetings of the Iron and Steel Institute will be held at Sheffield from the 26th to the 29th of this month. The meetings will be held at the new University Buildings, and considerable interest will be felt in the visits which the Institute will pay to the great armor-plate and gun-making firms in the neighborhood of Sheffield. Numerous papers will be read and discussed, among others M. Guillet, of Paris, will contribute a series of researches which he has made to ascertain the best kind of steel for use in motor-car construction

ELECTRICITY FOR IRONMONGERS.

It is felt that now is the time ironmongers should take a determined stand to prevent a similar mistake being made with electricity to that which ironmongers made in the early days of the gas business. Although British ironmongers sold gas fittings in a desultory way from the commencement of the industry, they often failed to grasp opportunities and allowed local gas companies, plumbers, painters and small traders to secure business in fittings and to take up agencies for incandescent burners and other novelties which were from time to time introduced. The Electrical Exhibition, which is to be held at Olympia, London, from September 25th to October 21st, will be a great object lesson, showing to traders the large number of electrical contrivances which are now on the market, and giving ironmongers an opportunity of judging the possibilities of business in electrical goods. It is hoped that the Exhibition will be visited by a large number of British ironmongers and that business will result, and also that agencies may be established so that a fair share of the new business which will inevitably result from the Exhibition may be negotiated through the Hardware trade.

CONFERENCE OF AGRICULTURAL ENGINEERS AT LIEGE.

The progress of the Conference of Agricultural Engineers at Liege has been watched with interest by British makers of implements and machinery, and the results of this novel international congress will, doubtless, be far reaching and will affect American makers of implements and machines in an equal degree. Resulting from the discussions arising out of excellent papers read by European experts resolutions were passed dealing with several of the burning questions of the day. The desirability of establishing trial stations in agricultural countries that do not at present possess them was endorsed; it was also recommended that each country represented at the congress should appoint commissioners to draw up a programme of trials of agricultural machinery, in order that the full efficiency of machines might be attained and that agriculturists might be urged to purchase only those implements and machines which will stand the test of meeting the requirements of the different countries in which they are to be used. The congress was so successful that it was considered that future congresses which it is intended to hold on similar lines should be even more far reaching than the one just held, and it was agreed that in future gatherings agricultural industry, agricultural instruction, agricultural engineering should be equally represented. Reference was made at the congress to the importance of extending instruction in order that the farmers of the future might be trained in the use of labor-saving implements and machines, and also that they might become fully acquainted with the advantages of those machines which manufacturers in Great Britain and the United States of America provide them with. Among the questions discussed were modern methods of wind pumping, heating engines and hydraulic motors, and a very interesting paper on the "Influence of Agricultural Mechanism in Improving the Social Condition of the Laboring Population," was read.

Digitized by Google

TECHNICAL SCHOOLS FOR USERS OF AGRICULTURAL MOTORS.

The use of agricultural motors is gradually extending in Great Britain, and the improvements in up-to-date agricultural machinery and mechanical motor power is being very prominently brought before users, not only by manufacturers, but by persons interested in the success of British agriculture. Fred. Taylor, the secretary of the Essex Agricultural Society, has just issued a circular letter to manufacturers of motors and agricultural engineers suggesting a general meeting of makers of such implements in order to discuss the practicability of instituting a series of field trials for motors and other modern agricultural machines. According to present arrangements the meeting will probably take place during the present month. The feasibility of giving instruction as to the employment of such implements to a selected number of students will also be discussed at the meeting. We shall probably hear more of the matter shortly.

THE ANNUAL DAIRY SHOW.

The next important event in the agricultural world will be the annual Dairy Show, which will be held, as usual, in London, at the Agricultural Hall early in October. Many gold and silver medals are offered and prizes will be awarded for proficiency in butter-making and in dairy work. There will be, as usual, keen competition between manufacturers of dairy appliances for the awards offered, and especially for the silver and bronze medals for any new invention showing a distinct and practical improvement.

HARDWARE VIEWS OF AN OBSERVER.

By W. H. Kilborne.

A run about among the Hardware dealers of New York City finds them in good spirits under an excellent Fall trade. The impetus which has been given to building during the past few months has had its effect in quickening the business with dealers, although they are cautious in extending credit to any but the regular builders of their acquaintance or of excellent reputation. The real estate business, and the contracting and building business to some extent has been overrun by an undesirable class with whom etxreme caution is advisable. Hence dealers are very wary along this line.

A movement was made in some quarters during the Summer months to gain some time from the store by early closing. One dealer in Broadway, Brooklyn, reports that while previously retailers had kept open all hours, last Summer he closed down tight at 7 p. m., while his business increased, notwithstanding the fact that some of his neighbors were very much alive in the rear of their stores while the front was ostensibly closed.

Dealers occasionally chafe over the apparent necessity of dividing their profit, not simply with the jobber, but with any Tom, Dick or Harry that gets hold of some samples, and securing practically jobbers' prices, starts out to get some business from the dealers to warrant his existence. It would seem, however, that this complaint is hardly a reasonable one, for in the Hardware business, as in many another, quantity is what cuts the ice. A dealer can place his order with whom he pleases and when he pleases, and if it is big enough to command special consideration, he will get it—otherwise, not. In the West much progress has been made in the Hardware business in combining dealers' orders for various articles and securing bottom prices. We know of at least one man out in Illinois who has made a good thing for himself and saved money for the dealers whom he has banded together to buy certain things in common.

Some practice like the above is necessary to successfully combat the mail order houses. The Hardware merchant must start in on the ground floor at least—or the sub-cellar if possible. We have before us a circular issued by E. M. Austin, of Litchfield, Ill., who combines a furniture with a Hardware business, though in speaking of the Illinois combination we had no reference to Mr. Austin. Mr. Austin gets out a big newspaper sheet circular monthly and prints 4,000 of these circulars monthly. During September he conducts a "Special Wage Earner's Sale," when prices are made specially interesting. He prints a list of some fifty different articles in Hardware, with prices of each under the head of "Value" and "Wage Earner's Price," the latter of which, needless to add, is much below the former. He prints a list of twenty-five users of the *"What Not"* ranges and says: "Ask these—not us." In order to successfully combat mail order competition an aggressive movement is necessary to increase the turnover in order to have plenty of leeway to name prices sufficiently low. This Mr. Austin is doing and his methods are worthy of emulation by others.

But to get back to the big cities. A favorite topic among dealers is a method for successfully bucking the house furnishing departments of the department stores. With most customers of the latter a hammer is a hammer, and patrons of department stores are not skilled mechanics looking for tools. They are women looking for cheap kitchen utensils, etc. Now, the proper offset to this would appear to be to make the Hardware store especially attractive to women. It might be a point worth considering whether the installation of a kitchen cabinet in the window full of the proper articles, ticketed with prices, would not be an excellent plan. Possibly this has already been done in Hardware stores. But the plan is worthy of general adoption, for it would appeal strongly to women and be much more effective than the sight of a bunch of kitchen "tools" that, no matter how nicely arranged, are only in a conglomerate mass compared with the advantage to which they are shown on a modern kitchen cabinet. The latter, too, is good merchandise, and can be easily sold when desired. This is a plan of window furnishing that should be welcomed in many quarters, for it is rather difficult to get up Hardware windows that will attract a great deal of attention. It is worth the effort, however, and must be done if dealers would get the women coming their way. They have the men all right, but they will need to cater carefully for the trade of the women, who in large cities are prone to get everything possible at department stores unless there is a good counter-argument.

A feature of the building boom that is manifest all over the country, especially in the larger cities, is the increase in the sale of oils and ready-mixed paints. Some of the New York Hardware dealers tell us that they have been making more of a specialty of this line, with very satisfactory results.

CORRESPONDENCE COLUMN. *(Continued.)*

THE ALBANY TRADE.

Conditions of trade in this section are favorable, especially in the wholesale lines. Smaller dealers in the country towns are enjoying a good trade from the farmers, who have excellent crops, and the wholesale dealers are consequently benefited by this. The city retail trade cannot be spoken of in as favorable a light just at the present time. The weather has been so agreeable as to keep many people away in the country, and this interferes to quite an extent with the early Fall retail trade usually expected at this time of the year. The firmness of the market and the excellent demand for goods reported throughout the country, however, is stimulating, and it will be a great disappointment if this Fall trade does not equal if not exceed preceding years. We are glad to report so favorably and hope that this condition is general throughout this section of the country.

Albany Hardware & Iron Co.
Chas. H. Turner, President.

THE MINNEAPOLIS TRADE.

We are busy as we never were before and we think that is true of every dealer in the Northwest in all lines. There is a fair crop of wheat at a little better than fair prices, a very large crop of flax at a low price, probably yielding an average price per acre, a large crop of barley, oats and corn. Farmers are in exceedingly prosperous condition, and apparently cleaning up their store accounts and buying freely and will have plenty of money to put away in the bank. Farm mortgages as a general proposition well cleaned up. In the city real estate moving more freely than for many years and at higher prices and in spite of large number of flats and houses erected and in process of erection, rents are very scarce and high, same applies to stores and offices. Plenty of work and good wages for any one that wants to work. A general prosperous condition. Collections were bad for several months, but now money is coming in quite freely We think we will find 1905 has been a most prosperous year for Minneapolis and the Northwest, and probably considerably larger volume of business done than ever before.

W. K. Morrison & Co. (Incorporated.)

THE ST. PAUL TRADE.

When the sun shines as brightly as it usually does here, and as it has for weeks past, when prices are firm, with an upward tendency, when orders come in every mail both from customers direct and from salesmen, and when good health exists amongst your friends and yourself, then surely happiness should beam from every countenance. Such a condition covers all of St. Paul. Surely, we are favored by Providence in many ways. Every indication points to a good business for some months to come. We wish that every one could find their homes in this favored locality. Collections are beginning to come in, and soon we hope to realize on that good crop so that every one will feel the relief of being released from debt and have energy to make new improvements.

Hackett, Walther, Gates Hardware Co.

NOT QUITE.

There was a very small audience in the theatre and it was dwindling away. On the stage the hero and heroine are meeting "by moonlight alone."

Hero (to heroine)—Are we alone?

Heroine (thinking of the audience)—Not yet; there are two fellows near the door who look as if they might be able to sit through another act.—*London Tit-Bits.*

RECENT TRADE PUBLICATIONS.

Davis & Cook, Watertown, N. Y., have sent us a new envelope size catalogue containing a description of Cook's Patent Adjustable Level and also illustrations of various kinds of wood levels with nickel and brass trimmings, every one of which they claim is made in the best manner and thoroughly tested before leaving the factory. In referring to their Railroad Track Levels, Street Road Track Levels and Track Gauges they state, "These levels are unusually well made and handsome. Very reliable and accurate. Perfect in adjustment, and edges fully protected by iron. The leveling appliance when not in use is protected by discs. The leveling glass can be seen from either side and 10 or 15 feet distant." Attention is called to their new Iron Levels which they strongly recommend to all using that style of level. The patterns are light and attractive, the edges lightly finished, and body fully protected by two coats baking Japan. Their aluminum levels are cast hollow and very strong and are not affected by climate. For prices, etc., write for catalogue.

Crescent Handle Works, Evansville, Ind, manufacturers of Agricultural Tool Handles, Logging Tools, Elm Hub Blocks, etc., are distributing their Catalogue A, illustrating and describing the regular goods they are now making. They state in regard to their Agricultural Tool Handles, "All handles are finished with a hard, gloss polish, and are very carefully and uniformly graded. We cordially invite inquiries for prices on our regular goods, or anything in the nature of handles of ash, hickory, maple, etc., any length from one to twenty feet." The catalogue will be found valuable to select from, and if you have not already received one send at once.

Hemp & Co., St. Louis, Mo., manufacturers of Patent Lock Stove Pipe, Elbows, Sheet Metal Goods and Japanned Ware Specialties, have recently published a neat little catalogue, which they take pleasure in presenting to the Hardware and Stove trades. They call attention to the steady growth of their business as a guarantee of their strict reliability. They state, "Our enlarged factory, together with the latest improved machinery, gives us advantages not possessed by any other manufacturer of this class of goods in the United States, thus enabling us to give our customers the benefit of low prices and first-class goods." They claim that their lock stove pipes are of the very highest grade and the best on the market, and that only the best selected stock is used in their manufacture. They also state that their corrugated and adjustable elbows are carefully made of full weight material, are the strongest made, and are far superior in workmanship and finish to any other make of elbows on the market. Cuts are given of these lock stove pipes and elbows and descriptions and cuts are also given of their camp stoves, stove drums, head lamps for hunters and fishermen, canteens, bath tubs, tanks and pumps. Catalogue and price list will be gladly furnished on application.

Wilcox Manufacturing Co., Aurora, Ill., have presented us with an exceedingly attractive catalogue (No. 6) of their door Hangers and Hardware Specialties. The catalogue has been very carefully prepared with a view to giving a description of the entire line of goods manufactured by the Wilcox Company in as brief a form as possible. It is in large pamphlet form, measuring 8½" X 6", is finely printed on excellent paper and is extensively illustrated. Each cut is numbered and prices and descriptions are given on the opposite page. The book is divided into seven sections, the first page of each of the first six sections showing views of the interior of the company's extensive plant. The first section is devoted to Wilcox House Door Hangers; Section II. to Wilcox Overhead Carrying System, Hand and Power Cranes, Hoists and Carriers; Section III. to Wilcox Barn Door Hangers and Accessories; while Section IV. deals with Wilcox Hardware Specialties. Section V. treats of the Wilcox Rolling Store Ladders; Section VI. of the Wilcox Fire Door Equipment; and Section VII. of the Wilcox Ball Bearing Mounted Grindstones and Emery Wheels. For more complete information pertaining to these lines write for special catalogue.

The Samuel Winslow Skate Manufacturing Co., Worcester, Mass., has recently sent us a very attractive little catalogue in pamphlet form, describing the different kinds of ice skates manufactured by them, among which may be found Winslow's National Club Skates, St. Nicholas Skating Club Rink Skates, Winslow's "Dutch Flyer" Skates, Hockey Skates of various styles and Winslow's Double Runner Skates. Cuts representing these various makes are also given. A copy of the pamphlet will be gladly sent on request, and a special Roller Skate Catalogue may also be obtained on application.

Sargent & Company, New York, N. Y., and New Haven Conn., have presented to the Hardware trade a pamphlet of advertisements and electrotypes describing their Gem Food Chopper, which they claim is superior to any other make as it not only cuts raw and cooked meat but it also chops all kinds of vegetables, fruits, eggs, bread, nuts &c., in uniform pieces without mashing or grinding the various substances. They suggest advertising in popular women's magazines and local papers and agree to furnish advertising helps, cook books, envelope slips, folders, show cards for use in store window displays and electrotyped ads. Illustrations are given of these advertisements and electrotypes, which they will be only too glad to send to customers, thus enabling them to advertise in an intelligent manner, and they are willing to do all in their power to help dealers in keeping the "Gem" Chopper at the front. For further information send for this interesting booklet.

Gerstendorfer Bros., 231-235 East Forty-Second St., New York, N. Y. have placed in the hands of the trade an illustrated catalogue of their popular Decorative Household Specialties, which they claim are just as represented and of the highest standard. Descriptions and cuts are given of "Our Favorite" Gold Enamel, "Japanese" Gold Paint, "Sapolin" Gold Enamel, "Standard" Gold Paint, Bronze Powders, Bronzing Liquids, Floor Stains, Enamels, etc., and the catalogue will be found useful and interesting to those dealing in this line of goods.

Logan & Strobridge Iron Company, New Brighton, Pa., have sent us a catalogue describing and illustrating the most popular styles of their large and complete line of Coffee Mills. They state, "The grinding parts are made from special chilled metal by the best mechanics, and all the construction is mechanically perfect, rendering them the best and fastest grinders that can be produced. The metal parts are handsomely engraved, and durably and attractively finished in the best quality of bronzes and lacquers." The catalogue is very neat and finely printed, and those interested will find it very useful as a detailed description is given of every style of mill shown. Send for one.

The Frank Miller Company, New York, N. Y., manufacturers of Leather Dressing and Blackings, have sent us their sixty-eighth annual illustrated catalogue and price list, exploiting their products. They claim that their dressings for harnesses and carriage tops are unequalled for giving a beautiful finish that will not peal, crack, or smut, and to which dust will not stick, and their shoe blackings and polishes are unsurpassed and are guaranteed to give perfect satisfaction. The catalogue is in the form of an envelope size pamphlet, numbers about twenty pages, and is indexed. If you are interested in this line send for one.

The United States Hoe & Tool Company, Columbus, Ohio, makers of high grade farm and garden tools, present an artistic pamphlet catalogue of over one hundred pages, exploiting their line of goods, which they claim are the best that high grade material, modern machinery, and skilled workmen can produce. They state they enforce a rigid inspection after every operation through which their goods must pass and when completed guarantee them as good as the best. They make two qualities of steel goods the first bearing the label of "The United States Hoe and Tool Co.," and the second bearing the label "Atlas", although only the first quality of goods were shown in the catalogue sent us. These two makes include all kinds of forks, hoes, hooks, and rakes, and a few other specialties. The catalogue is profusely illustrated and all the cuts are delicately colored which adds to the attractiveness of the book. If you have not received one of these interesting and instructive books one will be sent you free upon request.

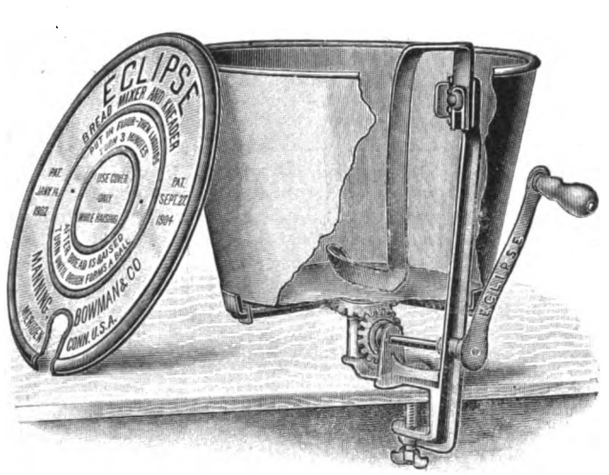
NEW GOODS AND SPECIALTIES.



ECLIPSE BREAD MIXER AND KNEADER.

Manning, Bowman & Co., Meriden, Conn., are manufacturing the "Eclipse Bread Mixer and Kneader," which they are introducing to the Hardware and house furnishing goods trades. It is an entirely new article and up-to-date machine that is con-

ECLIPSE BREAD MIXER AND KNEADER.

structed with a dasher or kneader that remains stationary while the receptacle revolves. It is claimed to be the only machine that actually kneads dough by depression. It is durable and simple in construction, easily cleaned, and can be set up or taken down in a few seconds. It is claimed to make from one to ten loaves of bread in three minutes without putting a finger to the dough, and the bread will be far more wholesome than if made by any other process, because the gluten in the flour is thoroughly

SECTIONAL VIEW.

developed by the kneading action, thus making the bread light, soft and moist, which can be eaten by the most chronic dyspeptic The machine is so arranged that a person may turn it easily either in a standing or sitting position, without the slightest exertion or inconvenience. The dasher may be left in place until the dough is raised, a few turns of the handle forming the dough into a ball, which can be removed from the dasher by unscrewing it from the frame, and it is then ready to be placed in the pans.

MEAT AND FRUIT JUICE PRESSES.

Erie Specialty Company, Erie, Pa., are placing their Meat and Fruit Juice Presses before the Hardware trade, which are shown in the accompanying illustration. The juice is discharged from an inclined pan as quickly as it is extracted through the open slot at the pointed end, therefore preventing clogging up or soaking back of the juice into the meat, and as a result more juice is obtained through their use. The press plate and pan being removable, are easy to cleanse and to keep the press in a perfectly sanitary condition; as all the juice is out as soon as the plate is screwed down, several pounds can be pressed in a short space of

FIG. 1.

time. The presses are made in the three styles shown in the cuts and in three sizes of each style. The construction is durable, the frame being made of malleable iron and a square thread steel screw with long nut will not cut out. The press shown in Fig. 1 is made to clamp to a table and has a pan 4¼ inches long, 3¼ inches wide and 1¼ inches deep, which when in use is 5½ inches above the table. The press illustrated in Fig. 2 has a pan of the same

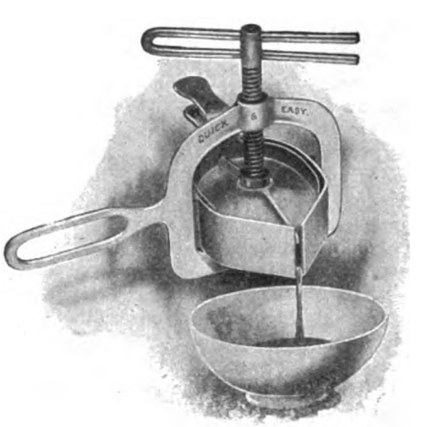


FIG. 2.

size and is intended to be held in the hand when pressing the juice from oranges. lemons and other fruit. The pan of the press shown in Figure 3 is 3 inches long and 1¾ inches wide and 1¼ inches deep, and is intended for use where a small quantity is required. The three styles in which each size of press is made are as follows: Japan frame, with a tinned cup and pan; Japan frame, with aluminum cup and pan, and nickel frame, with aluminum cup and pan. The press with tinned cup and pan, shown in Figure 1, weighs 4 pounds. The two with aluminum cup and

Digitized by Google

pan weigh each 2¾ pounds. The tinned cup and pan illustrated in Figure 2 weighs 3 pounds, and the two with aluminum cup

FIG. 3.

and pan weigh each 2 pounds. The weight of the tinned cup and pan press in Figure 3 is 1½ pounds, and the two with aluminum cup and pan weigh each 1 pound.

ATKINS PERFECT SAW SET AND VISE.

E. C. Atkins Company, Inc., Indianapolis, Ind., the well-known saw manufacturers, are placing before the Hardware trade a new Saw Set for hand saws, as shown in the illustration, Fig. 1, that

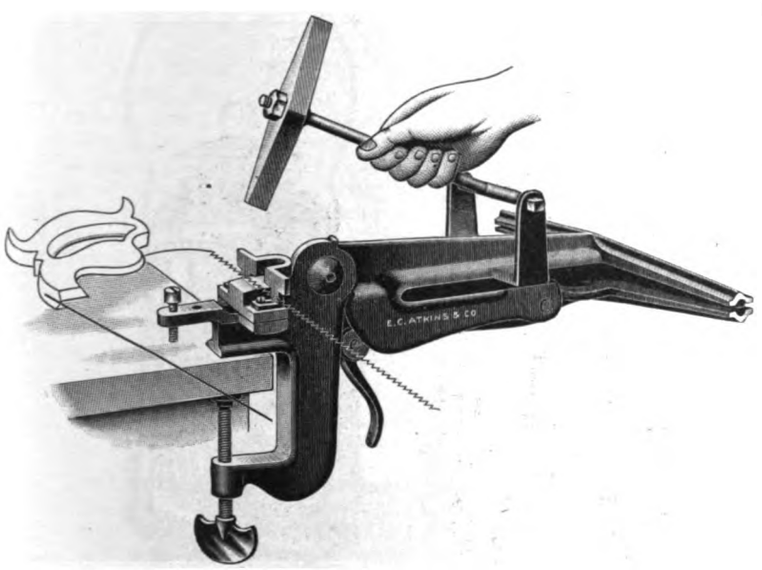

FIG. 1.

is sure to call forth favorable comment from all practical people. The device is so constructed that a uniform blow can be given to each tooth, thus insuring a perfectly even set throughout the

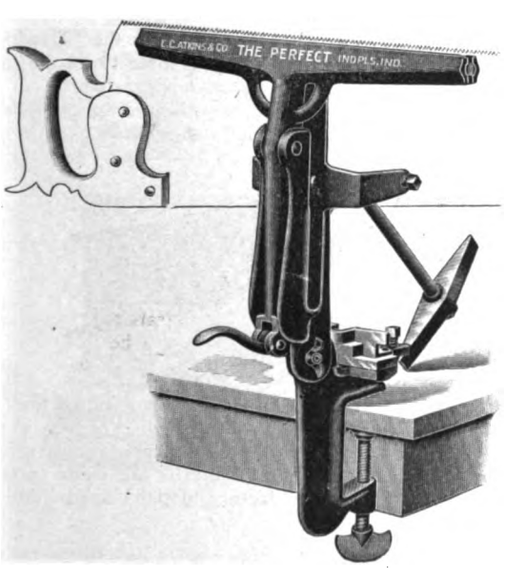

FIG. 2. AS A FILING CLAMP.

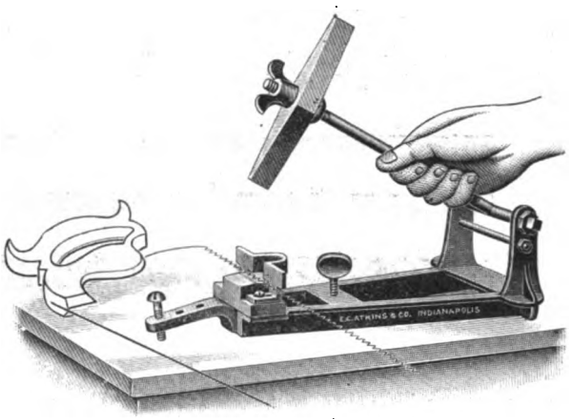
blade. There is no danger of breaking the points of the most highly tempered saw, even if operated by a novice. It is adjustable to any amount of set desired and will set the finest as well as the coarsest tooth perfectly. The Atkins Combination Perfect Saw Set and Vise (see Figs. 2 and 3) is a very convenient combination and can be adjusted to the different operations. Cut Fig. 2 shows the filing clamp ready for use. The jaws are rubber cushioned so that it is practically noiseless. In use it may be tilted to any desired angle, as it works on the lock lever principle.



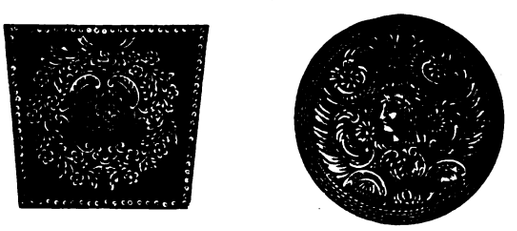


FIG. 3. AS A SAW SET.

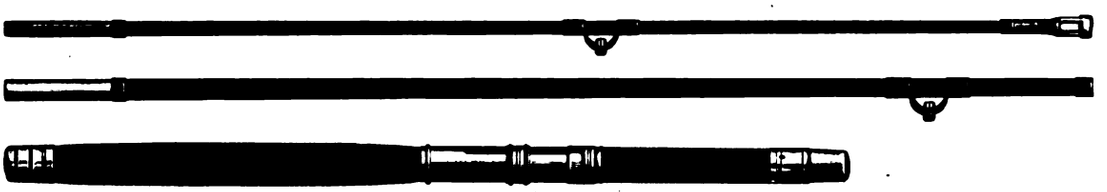
It can be fastened to a bench with a malleable iron screw clamp. In Fig 3 is shown the same tool adjusted for use as a saw set.

UNIVERSAL CHAIR SEATS.

The Universal Chair Seat Co., Syracuse, N. Y., are placing upon the market the Universal chair seat, of which we give two illustrations. It is made from material closely resembling leather, but it is always of the same color throughout and is fadeless with use, and, unlike leather, it will not stretch readily; it is claimed the material is free from the imperfections so frequently found in this description of goods. From the fact that these seats look like leather and are very attractive, they will be found ready sellers, as they are claimed to be capable of sustaining even a

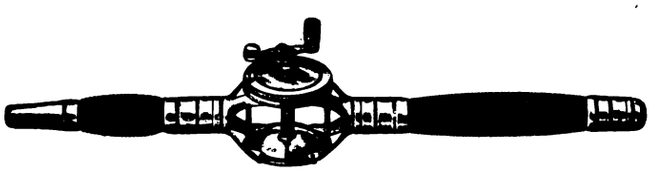
UNIVERSAL CHAIR SEATS.

greater weight than a leather seat. They are very durable, and, properly adjusted with brass upholstery nails driven not more than one inch apart, will outlast the strongest of chair frames. They are made in three styles: a flat seat for repair work and round seats for stools and cobblers' seats. A pair of shears is the only tool necessary, for the material easily cuts to suit any size of mat. They can be furnished in four different colors—red, black, olive and walnut, each color showing a handsome design in the centre of the seat. Cobblers' seats, as shown in Fig. 1, are furnished in twelve or thirteen-inch sixes, and, in addition, they make special sizes of the flat seats to order, provided the sides are made up of straight lines and the corners are either angular or rounded.



CHICAGO FLEXIBLE SHAFT CO.'S CLIPPERS.

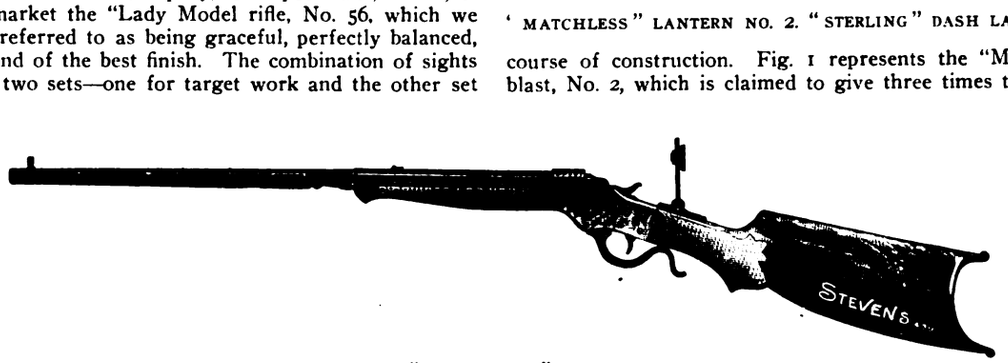
Horse owners now generally concede that clipping a horse greatly benefits him. As a consequence, it is quite the thing to find a clipping machine in every well-equipped stable. A man would hesitate to go around day after day, week in and week out, with no chance to change his clothes. The unhealthful and disagreeable side of it would appeal to him, and we suppose it is much the same argument that appeals to the owner of a horse. The Chicago Flexible Shaft Co., 106 La Salle Avenue, Chicago, seem to keep thoroughly abreast of the growing demand for clippers, as shown by their finely prepared catalogue, which describes every style of up-to-date machine. They are said to make ninety per cent. of all the clippers used. Their plant and equipment is so perfect that they are able to supply the most modern machines at rock-bottom prices. It will be a good investment to get their catalogue, which they will be glad to send if you write for it.



Digitized by Google

BRISTOL SALT WATER ROD.

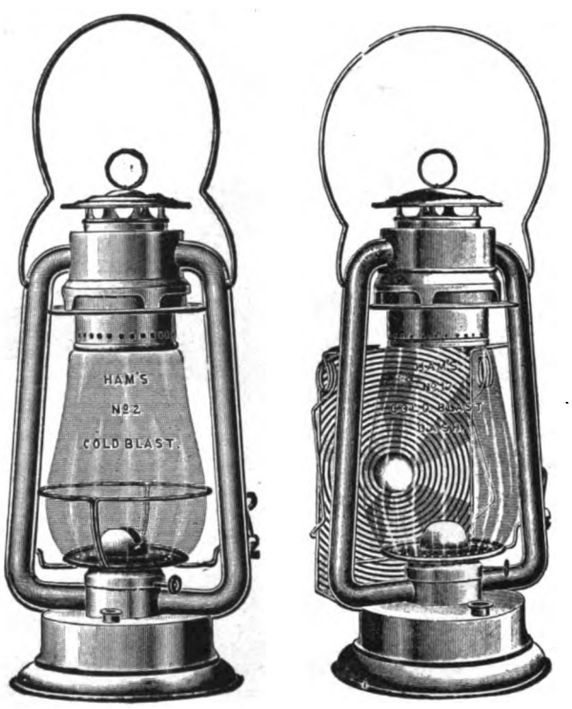
The Horton Mfg. Co., Bristol, Conn., are the manufacturers of the Bristol Salt Water Rod designed for tarpon, tuna and surf fishing. The strength and durability of this rod are claimed to be unequalled, as it is composed of two joints and handle, and is very convenient to carry and it will always keep its shape, as it cannot warp. The rod is six feet nine inches long, joints thirty-one inches long and it weighs twenty-six ounces. The handle is 24½ inches long, has 1-inch reel seat, celluloid wound grips with nickel plated mountings. The guides are special agate, German silver mounted, with agate stirrup top. They also make the "Bristol" Combination Reel and Handle, which can be used on any jointed bait or bass "Bristol" steel rods. This combination reel will be popular with fishermen, as it has many advantages over an ordinary reel, which are readily appreciated. In the illustration herewith it is shown the reel is on a line with the center of handle, thus equally dividing the weight and producing a perfect balance because it will not turn in the hand. A most perfect operation of the reel is afforded, as it does not turn to the under side of rod; it "hangs" naturally, the spool being easily controlled by the thumb. The reel is all metal, with polished steel pivots and bearings, finished in heavy nickel plate. It has a quadruple action, with click and drag, also screw-off oil cups and ivory balanced handle. The spool, which is very free running, holds 80 to 100 yards of line. The illustration given above is one-third its actual size.



BRISTOL SALT WATER ROD.

BRISTOL COMBINATION REEL AND HANDLE.

THE STEVENS "LADY MODEL" IDEAL RIFLE.

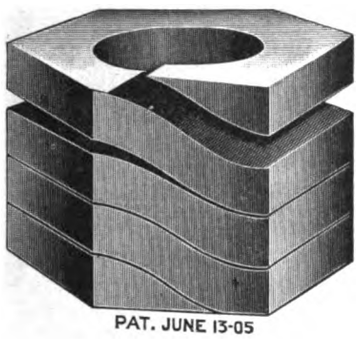


J. Stevens Arms & Tool Company, Chicopee Falls, Mass., is placing on the market the "Lady Model rifle, No. 56, which we illustrate. It is referred to as being graceful, perfectly balanced, light in weight and of the best finish. The combination of sights gives practically two sets—one for target work and the other set (when the peep sight is folded down and the combination front sight adjusted as an open sight) for open hunting work. This rifle will be furnished on special order only. The action is the company's latest, known as the sliding-bolt type, and is operated the same as its Ideal rifles, Nos. 44½ to 54. It is fitted with half-octagon barrel, 24 inches in length for rim fire cartridges, and 26 inches long for centre fire cartridges. The frame and action are case hardened, and the stock and forearm are of fancy selected walnut, highly finished and checked. The butt plate is optional, either the company's regular shotgun rubber or the Swiss butt plate, case-hardened. The sights for the rifle are the company's D combination, consisting of a Beach combination front, sporting rear and Vernier peep sight; but it can also be furnished without additional charge with Lyman No. 1 and No. 5 sights and an open rear sight. The weight complete is 6½ pounds. The ammunition for this model will be 0.22 short rim fire, 0.22 long rifle rim fire, 0.22 7-45 rim fire, 0.25 Stevens rim fire and 0.32 long rim fire. It will also be chambered to take the 0.22-15-60 Stevens centre-fire cartridge.

THE STEVENS "LADY MODEL" IDEAL RIFLE.

"COLD BLAST" LANTERNS.

C. T. Ham Mfg. Co., Rochester, N. Y., are the manufacturers of the "Cold Blast" Lanterns, illustrated herewith. Only the best material is said to be used. They are carefully constructed throughout, passing through several inspectors' hands in the course of construction. Fig. 1 represents the "Matchless" cold blast, No. 2, which is claimed to give three times the light of an ordinary lantern, while Fig. 2 is an illustration of the "Sterling" Dash lantern, No. 17, which is practically the No. 2 cold blast lantern with dash attachment, which makes it a very handy lantern for all-round use. These lanterns are made in the largest exclusive lamp and lantern factory in the United States.



"MATCHLESS" LANTERN NO. 2. "STERLING" DASH LANTERN NO. 17.

SMITH IMPROVED LOCK NUT.

The Smith Improved Lock Nut Company is placing upon the market the Lock Nut shown herewith. The nut is formed from a hexagonal coil of spring steel with horizontal and diagonal faces. It is all of one piece, not even the washer, except when

Digitized by Google

applied against wood, and is put on and taken off the same as an ordinary nut. Can be used as many times as desired without injury to thread in nut or bolt. It is claimed to be the only nut ever placed on the market that takes up the wear, also the stretch

SMITH'S IMPROVED LOCK NUT.

of the bolt, and is claimed that it will not loosen or give back the least fraction, and the stretch in bolt or setting of the parts are taken up by the spring lock, keeping all parts held absolutely solid until removed with a wrench. It is threaded to admit the ordinary track or machine bolt of all standard sizes.

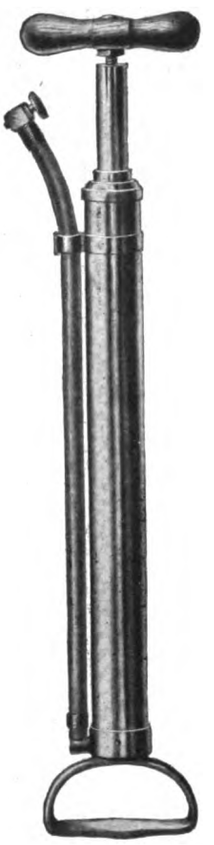
PIKE'S COMBINATION OIL STONE BOXES.

The Pike Mfg. Co., Pike, N. H., are now offering to the trade Combination Oilstone Boxes, as shown in accompanying illustrations. These are especially adapted to the use of machinists, carpenters, pattern makers, manual training schools, and, in fact, to all who use edge tools extensively, to whom they will appeal as most efficient edge-producing equipments. It is a well-known fact that the efficiency of an oilstone is greatly increased by keeping it clean and moistened with oil. It is likewise a matter of common knowledge with all skilled workmen that at least two oilstones of different grits are a necessity. The stones in the boxes rest on felt strips, thus forming an oil reservoir in the bottom of each box. The covers are lined with felt to absorb any surplus oil, thus keeping the stone surfaces always fresh and clean. The boxes are put up in two styles, viz., the Mechanic's Delight" and the "Pride of the Shop," the former of which is 13

MECHANIC'S DELIGHT.

inches long by 2½ inches wide, there being room for one 7-inch stone and one 5-inch—the stones being set end to end.

The latter style is shown herewith, which is 8¼ inches long by 4½ inches wide, having room for two 7-inch oilstones side by



PRIDE O' THE SHOP.

side, with compartment at one end for pocket oiler filled with Pike's "Stonoil." which is a very efficient oil for oilstones, razor hones, all kinds of tools, etc. They may be ordered with any combination of Bench Stones desired. These boxes are constructed of full weight, prime tin plate, enameled and fitted with brass springs, which hold the oilstones firmly in place when the boxes are closed and are being carried in the tool chest.

IMPERIAL-WIXON COMPOUND AIR PUMP.

The Imperial Brass Mfg. Co., 245-247 So. Jefferson Street, Chicago, Ill., are the manufacturers of the Imperial-Wixon Compound Air Pump, of which we show an illustration. The Imperial-Wixon is a double cylinder compound air pump, one cylinder being inside the other. On the up-stroke, the air from the outer cylinder is forced into the inner cylinder, and thus makes the first compression about thirty pounds. On the down-stroke this thirty pounds pressure is compounded to a very high pressure, which is conducted by an inside tube and rubber hose to the tire.

IMPERIAL-WIXON COMPOUND AIR PUMP.

It is claimed that the great ease of operation and large air capacity of this pump are beyond belief to any one who has never used it, which results may be summed up as due to the high pressure being on the down-stroke in the small cylinder, and the entire absence of checked valve or backing of any kind on high pressure space to leak air or cause unnecessary friction. The Imperial-Wixon is simple and convenient, has no parts to work loose or get out of order, is easily taken apart and repaired, and takes up no more room than an ordinary pump. The standard size is 18x1½ in. It is made of brass, polished and lacquered.

MORE BULLS' EYES FOR "PETERS."

Mr. Wm. Veach of Falls City, Neb., winner of the Free for All Handicap at Colorado Springs, has been doing some remarkable shooting recently. Some time during the first week or two of August, he ordered some Peters Ideal shells with a slightly different load than that he had been using. The first time he tried it he broke 256 straight at 16 yards and shortly afterward went to Verdon, Neb. for a tournament, breaking 199 out of 200 there. He has decided Peters shells are good enough for him.

At the tournament given by the Alert Gun Club, Phillipsburg, Neb., Sept. 4th, Mr. E. F. Markley won high average breaking 170 out of 180. Mr. Markley scored 97 out of 100 and made a run of 57 straight. He used Peters factory loads.

At the Brownsville, Pa. tournament, Sept. 14-15, high average score for the two days was won by Mr. James T. Atkinson, of New Castle, Pa., using Peters Ideal factory loaded shells. Mr. Atkinson is well known and deservedly popular with the shooting fraternity, having achieved a national reputation as the winner of the Consolation Handicap at Indianapolis, last June.

Mr. Woolfalk Henderson of Lexington, Ky., won the Auburn Handicap at Louisville, Sept. 4th, breaking 24 out of 25, shooting from the 19 yd. mark. He used Peters factory loaded Premier shells.

JAP-A-LAC

REGISTERED TRADE MARK

"WEARS LIKE IRON"

WHERE IS YOUR JAP-A-LAC?

When a woman wants to buy a can of JAP-A-LAC she goes where she thinks she can get it. If your stock of JAP-A-LAC is near your front door and in clean condition. a great many women will buy it, even if they are not in your store for that purpose.

JAP-A-LAC is being advertised every day in the year; you can sell it every day in the year. It will pay you to keep your JAP-A-LAC in a very prominent place so that the customers whom we interest in it may buy of *you*.

The dealer who gives attention to JAP-A-LAC is enthusiastic. It isn't up-hill work to sell it, for we attend to that. Our extensive advertising, appearing in 35 of the leading magazines, continuously, *makes JAP-A-LAC buyers.*

The dealer who keeps JAP-A-LAC right gets the benefit of our advertising. Our advertising is done for the dealers and means *real profits.*

Don't let your stock disappear from the front of the store; use your windows—use the first sections of your shelves for JAP-A-LAC, then you will really know what it means to sell so good and so well an advertised commodity.

CLEVELAND, OHIO

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED SEPT. 18, 1905.

389,549. Combination Tool. E. P. Crosby, Chicago, Ill.
389,553. Compound Tool. R. W. Diefendorf, Fort Plain, N. Y.
389,646. Bolt. J. T. Gunniss, Hancock, Mich.
389,657. Broom Head. G. H. Kimbler, Creelsborough, Ky.
389,666. Pipe Wrench. B. Heagan, Ouachita, La.
389,685. Wrench. W. H. Brock, Brooklyn, N. Y.
389,704. Bolt. J. J. Holland, New Orleans, La.
389,727. Spring Hinge. G. W. Warner, Freeport, Ill.
389,829. Wagon Brake. O. T. Baker, Fort Worth, Tex.

PATENTS ISSUED SEPT. 19, 1905.

799,719. Window Screen. W. F. Cummings, Plattsburg, N. Y.
799,737. Saw Set. H. L. Johnston, Detroit, Mich.
799,769. Wrench. F. N. Wilson, Cripple Creek, Colo.
799,917. Wrench. R. N. Miller, Pittsburg, Pa.
799,936. Weather Strip. H. J. O. Read, Minneapolis, Minn.
799,938. Padlock. W. E. Rembert, Longstreet, Tex.
799,977. Lantern. A. C. Dudley, Kansas City, Mo.
800,007. Door Fastener. G. W. Niles, Vanwert, Ohio.
800,014. Tool Holder. E. H. Purdy, West Somers, N. Y.
800,024. Lock. T. H. Speigelmire, Munhall, Pa.
800,027. Combined Door Lock and Latch. C. E. Stover, Centralia, Ill.

PATENTS EXPIRED SEPT. 25, 1905.

389,874. Churn. J. A. Crandell and O. A. Crandell, Nelson, Neb.
389,921. Dust Pan. G. A. W. Gage, Jr., Los Angeles, Cal.
389,920. Ironing Board. S. M. Brown, Chicago, Ill.
390,022. Sash Fastener. E. S. Hubbard, Belmond, Iowa.
390,025. Can Opener. D. H. King, New York, N. Y.
390,054. Spring Hinge. W. H. Beath, Rockford, Ill.
390,158. Key Hole Guard. T. W. Dawes, Cincinnati, Ohio.
390,166. Pruning Implement. F. A. Hall, Ennis, Tex.
390,183. Cork Extractor. C. Morgan and E. H. Morgan, Freeport, Ill.
390,185. Coffee Mill. E. H. Morgan and C. Morgan, Freeport, Ill.

PATENTS ISSUED SEPT. 26, 1905.

800,134. Door Holder. M. E. Bever, Kansas City, Mo.
800,140. Lock. C. E. Douggan, Detroit, Mich.
800,159. Wheelbarrow. J. Kaufman, Prairie du Sac, Wis.
800,188. Metal Nut. D. O. Ward, Oak Park, Ill.
800,189. Self-Locking Nut. D. O. Ward, Oak Park, Ill.
800,190. Self-Locking Nut. D. O. Ward, Oak Park, Ill.
800,274. Ice Cream Freezer. G. F. Dickson, Chicago, Ill.
800,279. Shade. P. G. Emery, Chicago, Ill.
800,280. Shade. P. G. Emery, Chicago, Ill.
800,305. Attachment for Hammers. A. J. Kitson, Ann Arbor, Mich.
800,342. Weather Strip. W. Van Horn, Piqua, Ohio.
800,343. Weather Strip. W. Van Horn, Piqua, Ohio.
800,415. Flat Iron Heater. E. Thomas, Erie, Pa.
800,417. Door Lock. J. Toth, Steinway, Long Island City, N. Y.
800,423. Window Shade and Curtain Bracket. G. Archambeault, Waterbury, Conn.
800,434. Seesaw and Ironing Board. G. W. Fairbanks, Blue Rapids, Kan.
800,525. Ironing Table. J. A. Whitted, Durham, N. C.

Graham Nut Co., Pittsburg, Pa., have made us the recipients of their new illustrated catalogue which has been published with a view to familiarizing the trade with the very extensive line of goods manufactured by them. They state, "We beg to announce the completion of our new plant located at Neville Island, Pa., where with increased facilities and modern machinery we are prepared to furnish our customers with material of the highest quality, and will endeavor to maintain our reputation established during thirty years' experience in this line of business. Also the completion of our new city warehouse and office building in Pittsburg, where, with improved facilities for handling material, we will serve our trade promptly and satisfactorily." The book covers eighty pages, is indexed, and measures 9" X 6", and is finely printed on excellent paper. It has been carefully prepared and detailed descriptions are given of the various kinds of nuts, bolts, screws, washers, rivets, and turnbuckles. For further information regarding these well-known goods, send for a copy of Catalogue No. 5, with which the manufacturers will only be too glad to supply you.

REVIEW OF THE MARKETS.

WIRE NAILS: It was in the nature of a surprise to the trade that an advance of $1.00 per ton on Wire and Wire products was announced on September 28, to take effect from date, it following so soon after the advance of September 11. The other mills have announced a corresponding advance. The month of September was a record month for sales of Wire Nails and business is exceedingly good, with prices firm and steady at the advance. Quotations are as follows, f.o.b. Pittsburgh, plus actual freight to point of delivery, 60 days, or 2 per cent. discount for cash in 10 days:

Carloads to jobbers.....$1.80
Carload lots to retail merchants..... 1.85

New York. Since the advance of 5 cents per keg on September 28, quotations for small lots from store are $2 to $2.05 base, with the demand a quite active one.

CUT NAILS: Not anticipating the state of affairs that seemingly makes it necessary, the Cut Nail Association at the September meeting made no arrangement about meeting an advance on Wire Nails before the next meeting, when an advance is likely. Quotations are as follows: $1.65, base, for carload lots, f.o.b. Pittsburgh. Iron Cut Nails for delivery at Pittsburgh, Buffalo and all points west of these cities are held at $1.75, base, in carload lots.

New York. The prices remaining unchanged, there is a good demand for Cut Nails locally. Quotations for small lots from store are on the basis of $1.90.

BARB WIRE: The recent advance of $1.00 a ton affected also the price of Barb Wire and Fence Staples. There has been a good demand and the trade with jobbers has been excellent. Quotations are as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$1.95	$2.25
Retailers, carload lots	2.00	2.30
Retailers, less than carload lots	2.10	2.40

Plain and Galvanized Fence Staples are 5 cents less than Painted and Galvanized Barb Wire.

SMOOTH FENCE WIRE: This staple article was advanced with other wire products and enjoyed a steady demand. The trade of September is reported to have exceeded that of August. Quotations are as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads $1.65
Retailers, carloads 1.70

The foregoing prices are for base numbers, 6 to 0. The other numbers of Plain and Galvanized Wire take the usual advances.

HATCHETS: The Hatchet Association at their recent meeting decided on a ten per cent. reduction to the trade, on the regular line of first-class goods, making the quotation 50 per cent., instead of the 40 and 7½ per cent. previously prevailing, with the usual rebates to jobbers on the classified lists.

JACK SCREWS: The quotations ruling the market on Jack Screws have been advanced 10 to 12½ per cent., the discount now being held at 80 to 80 and 10 per cent.

WIRE ROPE: In conformity with higher prices quoted on Wire, an advance has been made in prices of Wire Rope; the quotations now ruling are:

Plain (Bright or Black).....45 and 2½%
Galvanized .....37½ and 2%

SASH WEIGHTS: The recent advance in the Iron market affects the price of Sash Weights materially. The following are the official quotations of the leading makers in each section acting in harmony with the conditions of the Metal market, moderate concessions being given the large buyers:

Eastern Foundries.....$27.50 to $28.00
Southern Foundries ..... 20.00 to 23.00
Middle and Western Foundries ..... 23.00 to 25.00

On account of more profitable business offering, a number of foundries decline making sash weights as a side line at present.

PUTTY: The Association of Putty Manufacturers in New York has advanced the prices of Commercial Putty on account of the higher prices of materials from which it is made; and the following now represent the market in accordance with quantity required:

Bladders .....$1.65 to 1.85
Barrels or Tubs..... 1.20 to 1.40
Tins, 1, 2, 3 and 5 pound..... 2.60 to 2.90
Tins, 12½, 25, and 50 pounds..... 1.45 to 1.85

ROPE: The following prices may be said to represent the market:

	Cents per pound.
Pure Manila, 7-16 and larger	12
Pure Sisal, 7-16 and larger	10
No. 2 Sisal, 7-16 and larger	8

LINSEED OIL: The following quotations are announced on "City" Raw Oil by the Dean Linceed Oil Co:

In lots of less than 5 barrels.....54 cents per gallon.
In lots of 5 barrels or more.....53 cents per gallon.

The "American" brand for respective quantities, 1 cent per gallon less.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than raw.
Calcutta Oil.....60 cents per gallon.

THE PHILADELPHIA TRADE.

Fall trade is well under way, and the delightful weather is prolonging outdoor work, and helping to sustain a good demand for Hardware. Tools and general supplies of all kinds are in request, and on some lines it is difficult to supply actual wants. This is particularly true of a few items in which a notable scarcity exists, despite the fact that the prices on these special goods are just now at a high figure. We refer especially to those goods in which cotton is the leading part. The tone of the market is undeniably strong. Nails and Wire advanced recently and further advances are confidently predicted. Copper goods are all tending towards higher prices, while Copper Rivets and Burrs have reached their highest point for years. The feature of the past week has been the announcement by the Axe Manufacturers that no advance was made in prices October 1st, and this was probably a wise conclusion, as Axes are generally recognized as being high. A change took place in Hatchets and the associated manufacturers made a slight reduction in price, but as their price has been controlled artificially, the action has no significance as far as the general market is concerned. The outlook for business, during the balance of the year, is most encouraging, as both manufacturers and jobbers express unbounded faith that the next few months will develop a large trade, and already we are beginning to hear similar predictions for 1906. All this is most gratifying, and at the same time it is well always to remember that expansion can be carried too far and that a prudent man does not forget his prudence even in prosperous and expanding times.

Biddle Hardware Co.

THE PITTSBURGH TRADE.

Pittsburgh is doing a large business this Fall. Manufacturing interests are especially busy and prices are firm, with an advancing tendency. Demand is heavy in railroad requirements, rail, locomotives, cars and bridges, while structural steel for buildings is ordered several months ahead of the capacity of the mills. Merchants are also doing a good trade, but not quite up to the pace set by the manufacturers, and are ready for a greater demand upon them. Conditions throughout the country are all of so favorable a nature that it may be said there is not a cloud in the business horizon. The Catalogue House Question has occupied a large share of the attention of merchants during the past year and something has been done toward a united movement to restore this lost trade to its old channels. There is another drain upon the business of merchants, which, while it has not attracted the same attention, diverts a very considerable amount of trade from the retailer, and consequently from the wholesale house. We refer to the custom of giving merchandise as prizes to purchasers of specialties, such as soaps, flavoring extracts, etc. Our attention has been called to this by several of our customers, who complain that large quantities of ordinary goods, such as washing machines, lawn mowers, guns and numerous other items, are sent to their customers as prizes for buying some specialty and which, of course, reduces their sales by just that amount. Unless you have given this matter some notice, you will be greatly surprised to find the extent to which it has gone. We commend this matter to our associations, who are dealing with the Catalogue House question, to see whether it is possible to cure this evil or reduce it to less formidable proportions.

THE CLEVELAND TRADE.

Sixty days in the woods is not a good preparation for a business letter, but I find upon returning that my past predictions about business have come true, and yet some danger exists. Business just now has most to fear from a boom breeding panic. Trusts may save us again by their conservatism. The largest business interests, if they are large enough, can control this. Whenever outside mills enough exist to compel competitive fights until one side is financially crippled, we shall have a giant panic. Until then the steel and iron interests will be comparatively safe. The fact that fraud is being uncovered is a source of protection rather than injury to financial interests. It will be much safer to trust large financial concerns because of such revelations. The peculiar temptations that have wrecked reputations will be modified and the same qualities that furnished the light to find corruption will help to prevent its repetition. Our progress is not confined to money making, but we are gaining in far more important matters that will greatly increase the value of wealth. All values increase with the increase of character. If not in Wall Street, in the country at large character counts as a basis of credit. The country is greatly indebted to President Roosevelt for furnishing the light that is penetrating the dark places. The best insurance against evil is the knowledge of its existence, and our house cleaning is progressing finely. Time will restore the conditions when our generals in finance will be first in character. Bank defalcations are sure to decrease under the limelight of the present. A reaction from our money-making scramble will be wholesome, with more attention to weightier matters. Evil unearthed is a promoter of good. Good in the making.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE COLUMBUS TRADE.

This has been a busy year with us. Trade has been excellent, and with the extra work in getting our new quarters shaped up, we have had a strenuous year. If any Hardware dealer has an idea that moving and fixing up new quarters is easy, let him try it and he will change his mind. The task of sampling a stock of Hardware is a big job. After goods have been distributed, you find you haven't got them where you want them, so they must be changed; but we are happy to state that we are through with the job and are fixed to do business with but little extra handling or loss of time. The Summer has been one of unusual prosperity in this section. Crops were fine and the weather in most sections was favorable for harvesting. The corn crop is being cut now and is going to be a record breaker. We have had no killing frosts yet. Building in Columbus is far ahead of any preceding year, and in some sections it looks like a building boom in a great many small cities, and farmers have been building houses, barns and sheds galore. What else could you expect of such a State as Ohio? We cannot see any threatening symptoms for future trade so far. With good crops and prices, and employment at good wages for all that will work, we can see no reason why trade should not be good through 1906. If you Easterners ease up on frenzied finance and follow the President's advice, or in other words, believe as he does in giving every man a square deal, there would be more money distributed over the country; but when insurance companies gobble up everything in sight and let the policy holder who puts up the money hold the empty bag, it is anything but a square deal. It makes one dizzy to think about . Possibly if we had been on the preferred list, we might think differently, but we were forgotten. There is nothing like a family row to bring out facts. In the language of Mrs. Katzenjamer, "What a skinch they had." It would be a good thing to go clear through the line of insurance companies, as there may be others. If some of the Nabobs would live on pork and beans like we poor woolly Westerners have to, they would not break the eighth commandment. What a world this would be if every body were honest. There would be no need of any other heaven. Wings would grow on all of us and when we finished our money-making effort, we would be ready to fly up some place and get good, pure air and be happy; but we fear we must go the way of all flesh, and hope for wings on the other side. That we may all have them is our prayer.

THE SMITH BROS. HARDWARE CO.
J. H. Smith.

THE SAGINAW TRADE.

Trade conditions in Michigan are very bright at this season of the year. We had exceptionally fine weather during the month of September, and the frost held off long enough to allow the farmers to secure their crops. The retail stocks throughout the country seem light, and the number of orders handled daily is larger than last year. The general feeling among the trade is that business will be good for some months to come. There seems to be more confidence in the markets and a better feeling all around than has existed at any time during the year.

MORLEY BROTHERS.
R. C. Morley, President.

THE DAVENPORT TRADE.

The real truth is that things are running so smoothly that there is very little new or strange to write to HARDWARE of special interest at this time. The recent advance, in fact, two advances in quick succession in Nails, Wire, etc., has stimulated the demand for these goods, making more work and requiring the use of more capital without a corresponding increase in profits. If we could sell as many carloads of Fish Hooks as Nails, we would make more money. There were never better crops, and prices of same are fair, hence collections are satisfactory.

THE PEACEMAKERS

"Bang!"

"Why did you do that?" snapped Mr. Holt, bouncing out of his office chair as if a mine had exploded under him. His partner, Mr. Hawkins, was returning to his desk after slamming the door.

"Because I have a cold and I want that door shut!" retorted Mr. Hawkins, with the exaggerated hoarseness of a man who has

"BECAUSE I'VE A COLD IN MY HEAD AND WANT THAT DOOR SHUT."

a cold and wants to make the most of it.

"Well, you needn't try to knock the wall out. We may need that wall again."

"Really, I thought from the way you always leave doors open that you considered walls an unnecessary nuisance. You will never be happy until you are doing business in a bird-cage."

"Well, when that time comes I'll not be doing business with a fool partner."

At this point Mr. Hawkins burned out his fuse, to borrow a

"BUT YOU HAVE NEVER ASKED HIM TO DO IT."

simile from the trolley cars, and the partnership of Hawkins & Holt, Commission Merchants, began to dissolve in the fervent heat of a sudden quarrel. It took them only about three minutes to say worse things about each other than even their bitterest enemies ever suspected. At last Mr. Holt closed his desk with a crash.

"This settles it," he fumed. "I am going to consult my lawyer and have this partnership dissolved at once."

He then rushed from the room, leaving the door open behind him.

"It can't be dissolved too soon to suit me," bawled Mr. Hawkins, as he arose and shut the door with a final bang which shook down half a yard of plaster.

It was their first quarrel, and, as usual in such cases, it began about a trifle. Because it was a trifle, that a little consideration on either side could have smoothed over, the quarrel was all the fiercer. Within five minutes each partner was heartily ashamed, but was also determined that he would not be the one to apologize. However, they both did the wisest thing possible under the circumstances. They went home to talk the matter over with their wives before consulting their lawyers.

"What perfect nonsense!" exclaimed Mrs. Holt, after listening to her husband's side of the story. "And just as the partnership was beginning to be so profitable!"

"Well," he replied sulkily, "his habit of banging the door upsets my nerves so that I can't work!"

"But have you never asked him not to do it?"

"HELLO! HELLO! THAT YOU, CARRIE?"

"Yes, but he immediately begins to make a row because I occasionally leave the door open."

"Occasionally?"

"That's right! Take his part!"

"Oh, no, I'll not take his part, for I think one of you is just as foolish as the other."

"But you said that as if you thought I was in the habit of leaving doors open. You know well enough that I never leave doors open at home."

"But there is a good reason why you don't. Now! Don't begin to flare up at me about it. You can't get *our* partnership dissolved over a pesky door. You just sit there and cool off while I see about dinner."

While this conversation was in progress Mr. Hawkins was also having a heart-to-heart talk with his wife.

"I never heard of anything so silly in my life!" she finally commented.

"That's right," snorted her choleric husband. "I needn't expect any sympathy from you even though my head is stuffed with cold, and I may get pneumonia from sitting in drafts in the office."

Digitized by Google

"Nonsense. You know well enough that I am awfuly sorry you have such a bad cold—but for two grown men to get into such a row! The idea!"

"But that was his fault."

"Ye-es, but you know you are always slamming the doors. You sometimes frighten me half out of my wits."

"But why will folks always leave doors open?"

"Oh, come now, let us drop the subject till I get you a good hot drink. Then you'll have to put your feet into hot water and go to bed."

A couple of hours later when Mr. Hawkins was in bed and trying to squirm from under an old-fashioned home-made mustard plaster that would raise a blister on even the tough hide of a hippopotamus, Mrs. Hawkins went to the telephone and called up her old schoolmate and particular chum, Mrs. Holt. It was really the wives who were responsible for starting the partnership, as they had introduced their husbands to each other. Naturally they felt responsible for its continuance. The following is a true account of what might have been heard at the Hawkins end of the wire:

"Hello! hello! That you, Carrie? Yes, this is me. Did you ever hear of such a silly thing in your life? Of course, we must get it straightened out. If our babies quarreled like that we would spank them and then make them kiss and make up. And just as I was beginning to look forward to owning a red motor car, too. What's that? Don't you worry. You'll get that sealskin sack all right. But how are we—(Hello, Central, what are you cutting in for?) Yes, as I was saying when the Central cut in, that we would have to hit on some plan to make them friends again. What? You have the scheme—Good! Yes—Yes—Yes—Well, since you admit that Tom has a bad habit of leaving doors open, I'll admit that the way Jack bangs doors is something awful. Uncle Harry says that Jack will never be happy in Heaven because of 'The Gates Ajar.' And I chaff him because the firm has never tried to do business with the far East. I tell him it is because he objects to the Open Door that the papers talk so much about. But what's your scheme? Yes—Yes—Yes—What's that? You have cured Tom of leaving doors open at home? Yes. And you think I can cure Jack of his habit of slamming doors? Yes. Why, that's simply great. But, I say, Carrie, don't let's tell them anything about it. Let's do it all ourselves. Yes—Yes— Why, that's easy. You convince Tom that he is on the verge of nervous prostration, and that's why he got so irritated. If he isn't, just talk over the household accounts with him, and that will finish him. Get him to take the rest cure to-morrow and stay away from the office. I'll fix Jack so that he

WHAT THE GIRLS WERE UP TO YESTERDAY.

won't go to the office, either. I think I can hear him swearing just now about the mustard plaster he has on. To-morrow morning I'll turn him over and put one on his back, and make him stay in bed all day. He is so scared of getting pneumonia that it will be easy. And you and I can meet at the office and fix things up all right. Ten o'clock will suit me exactly. Yes—Yes—I am going to cut it on the bias and use leather trimmings. Yes. Good-bye!"

Two days later Thomas Holt walked into his office at nine o'clock. He nodded curtly to the office force, and instantly resented the discreet smile in which the head bookkeeper indulged. To make it clear to every one that he had not capitulated, he stalked into the private office of the firm—and left the door open. By the time he reached his desk, he turned angrily, for he thought he heard subdued laughter in the outer office. To his complete surprise the door was closed. He walked back to investigate the miracle, when his partner, who was also a punctual man, threw open the door. He was in a savage humor, and looked to be crouching down in his clothes, so as to keep his underwear from pressing too hard on the blisters on his chest and back. Seeing his partner looking at him, he glared back, and deliberately attempted to slam the door. At this there was a burst of unrestrained laughter, in which even Mr. Holt joined. Hawkins turned angrily, and saw that, instead of closing with the force he had expected, the door was closing quietly, yet firmly and quickly, by itself.

"I'M SORRY."

"So that was what the girls were up to yesterday," said Holt, laughing. Hawkins by this time had noticed the Yale & Towne Blount Door Check that so completely controlled the actions of the door, and laughed also. With one impulse both men stretched out their hands, and said:

"I'm sorry."

"You see," explained Holt, "Carrie has always had the important doors in our house, such as the butler's pantry, nursery, back stairs, all outside doors, &c., fitted with Yale & Towne Door Checks, and that was how I got out of the way of closing doors after passing through them."

"Humph!" said Hawkins. "I guess I'll have Mary fit up our house in the same way. It may contribute to the peace of the family."

"Sure it will, for it is the only thing that makes a door perform its complete functions. A door fixed this way keeps flies out, keeps the heat in, and keeps kitchen odors where they belong, and helps people to keep their tempers." Later when the reconciliation became evident to the office force, the bookkeeper said to the stenographer: "Blessed are the peacemakers, even when they happen to be mechanical ones."

The Yale & Towne Mfg. Co., New York, will furnish this story in booklet form in quantities, on request by dealers, bearing the dealers' imprint.

✤

E. W. Bliss Company, Brooklyn, N. Y., are again bringing into prominence their machinery for the manufacture of Pieced Tin and Black Iron Ware by the use of a new eighty page catalogue, in which they give very complete descriptions of their power presses, horning and wiring presses, squaring and slitting shears, reading and flanging machines, double seaming machines, etc. This company has been doing business a good many years and has a reputation all over the country for its excellent products. The catalogue shows a view of their main works, dock and projectile department, which at once indicates the importance of the concern. The catalogue is finely printed and well arranged and is extensively illustrated with cuts of every kind of machine mentioned. It is a convenient size to handle for reference and will be found useful and instructive to manufacturers in this line of goods.

STAR SAFETY RAZORS

WHY hesitate to carry a line of Star Safety Razors and Supplies when you have the opportunity of procuring a handsome display and stock case with small and large assortments of Star Safety Razors, which assists in disposing of a quantity of them and also knowing that the retail prices are strictly maintained so as to assure the dealer of a good profit?

The Star Safety Razor has stood the test for the past twenty-five years and our vast experience in all these years has helped to make the Star Safety Razor the most practical and the only mechanically perfect safety razor in the market to-day.

Our Star Safety Razor Blades cannot be equaled in quality and workmanship anywhere in the World.

Why let the sheet steel propositions that are now offered to the public faze you in making up your mind as to what line to handle? For comparison we call your attention to the Swedish old style razor, also others made in France and Switzerland with the thin sheet steel blades. Have they been a success? You can tell from past experience that the hand-forged hollow ground and concaved razors were always preferred. We doubt if any dealers between the Atlantic and Pacific Coast, at the present time, are selling or carrying any of these thin sheet steel old style razors. It is the same with the safety razor proposition. While sheet steel safety razors are extensively advertised, thereby creating a demand for safety razors, the public still prefers the hand-forged or hollow ground blade and more so if the dealer will explain the merits of the Star Safety Razor in comparison with a sheet steel safety razor to the ignorant public.

It is to the dealers' interest to offer to their patrons a razor of merit, which they can recommend, positively knowing that same will give good results.

The pillars and foundation of all successful business has always been a satisfied customer. Why then sell your customers an inferior article of questionable merit?

Write us in reference to wholesale prices, asking us about our Assortments A, B, and C.

SIGNIFICANCE OF TARIFF REVISION BY DOMINION.

Special Agent Pepper, writing from Winnipeg, Manitoba, furnishes an interesting letter in regard to conditions in that section of the Dominion of Canada, and also supplies news relating to the work of the tariff commission, whose sessions began in Winnipeg September 7th. The list of questions sent out by the minister of trade and commerce in a circular letter and which indicate the scope of inquiry, will be read with interest. Mr. Pepper's letter follows:

The tariff commision of the Dominion government begins its hearing in Winnipeg on September 7th. This commission is composed of the minister of finance, the minister of customs, and other members of the cabinet. The importance of these hearings is that they are preliminary to the general revision of the Canadian tariff which the government has announced will be made in 1906.

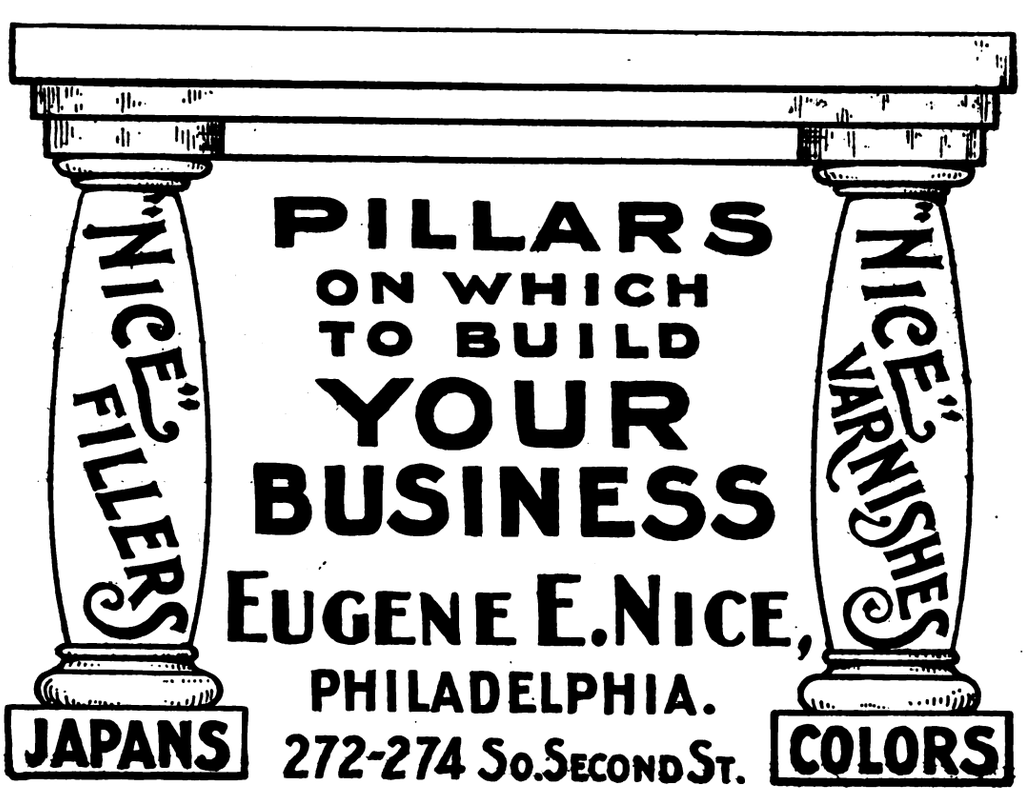
Some significance is attached to the fact that the commission is to begin its work here in Manitoba, which is the gateway and distributing centre of the northwest that is being opened up to settlement. Geographically and through the railway systems Winnipeg controls the trade of this section of the country. An indication of the volume and extent of this trade can be had from the knowledge of importations. In 1903 the duties collected at the Winnipeg customs house amounted to $2,252,000; in 1904 the total was $2,725,000. For the current year they are expected to exceed $3,000,000. The total of the imports entered at Winnipeg in 1904 was $14,300,000. This year I am informed that they will probably exceed $17,000,000. In addition to the collections at Winnipeg the custom dues paid at Regina, Lethbridge, and Calgary are in excess of $600,000 annually, and the total importations are upward of $6,000,000.

A large portion of the entries at all these custom houses is of goods from the United States, and of these imports farm machinery and all kinds of agricultural implements constitute the bulk. The Canadian market for farm machinery may be said to lie largely in this section, where the competition is between the manufacturers of the Mississippi Valley and the States bordering the Dominion and the Canadian manufacturers, the majority of whose plants are located in the province of Ontario. As an illustration of the competition it may be stated that there are in Winnipeg eight agents of threshing machines and similar articles manufactured in the United States and the same number representing Canadian firms. The number of representatives of firms manufacturing binders, reapers, plows, etc., in both cases is larger.

WIRE TRADE CONSTANTLY EXPANDING.

Never before in the history of the wire industry has the demand at this time of the year been so brisk, and the various mills are preparing to meet one of the most active periods they have ever enjoyed. The export branch of the wire trade also gives promise of expansion now, especially from the far east, since the war between Russia and Japan has been ended. The statement has been made time and time again that the wire tonnage of the United States will eventually exceed the steel rail tonnage So far as the United States steel corporation is concerned, it came very near it in 1904. In that year 1,226,610 tons of wire goods were produced, as compared with 1,242,646 tons of steel rails. But there has arisen a remarkable demand for steel rails over the last few months and there is no danger of wire production exceeding rail production next year. The following table shows the steel corporation's production of leading articles of steel in 1904 (in tons):

Steel rails	1,242,464
Wire and products of wire	1,226,610
Blooms, billets, sheets, slabs, etc.	932,029
Sheets and tin plate	735,482
Tubing and pipe	710,765
Merchant steel, skelp, hoops, bands, etc.	577,384
Finished structural work	357,488



Juicy Chops and Steaks

are what all house-keepers want.
They need "Never-Break" Steel Spiders to be successful.
Catalogue and recipe free.

"Never-Break" Seamless Steel Cooking Utensils do not scorch or burn the food. They will not warp from most intense heat. All because they are made right.

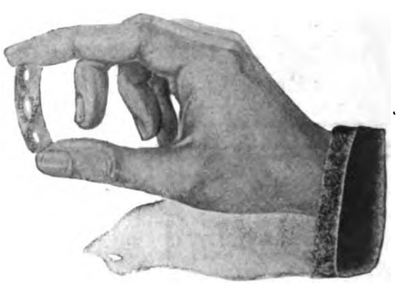
The Gillette Safety Razor--

Has the FIRST, and only NEW idoa in RAZOR BLADES for OVER FOUR HUNDRED YEARS



Although on the market for less than two years, the **Gillette Safety Razor**, judging alone by actual sales, is to-day used, appreciated and endorsed by *more* enthusiastic, discriminating shavers during this time than *all* of *the rest* of the so-called safety razor purchasers in the same period.

There is a reason for the success of the **Gillette Safety Razor.**

Exact Size Complete Razor.

It is as *different* from other *so-called* safety razors as *other so-called* safety razors are from the old-fashioned razor.

The dealer who handles the **Gillette Razor** makes *liberal* profits, for the fixed retail price of $5.00 for a set *is*, and *will* be *maintained* under U. S. Patent laws, thus assuring every dealer a full profit.

The blades are as thin as paper, as hard as flint, as tough and flexible as whalebone.

The Gillette Safety Razor is made by *automatic machinery insuring perfection* and *uniformity* in every detail and a never varying quality which is so often found in the old-fashioned hand-make razors and blades.

The Gillette's Advantages

Our manufacturing facilities have been increased recently to meet the enormous and growing demand for the **Gillette Razor**, and this demand proves that it will certainly pay YOU to investigate at once the many advantages that are now offered in handling this phenomenal shaving device which is the talk of the civilized world.

Remember -- The Gillette while having *many imitations*, has no direct competitor, *is in a class by itself*, is here to stay, and its patents will be fully protected and all infringements on its rights will be prosecuted.

TWELVE BLADES.

TWENTY-FOUR SHARP EDGES

A Paying Proposition

No shaving proposition to-day offers you the inducements that the Gillette does.

Write to-day for further particulars and do not allow yourself to be persuaded to do otherwise by other *so-called* safety razors that have been put on the market, due solely to the phenomenal success of the **Gillette Safety Razor.**

Gillette Sales Co., 1104 TIMES BUILDING, BROADWAY, NEW YORK CITY.

Digitized by Google

Are You A Gillette Safety Razor Dealer?

Then you will receive the benefit of the enormous advertising plans that are now being worked out, embracing Magazine publicity, Signboards, extensive catalog distribution, and in fact, *every known* and *up-to-date* method in the science of advertising.

By our publicity methods we are interesting and appealing to *millions* of shavers *every* month.

We are *spending more money* in *making known* the unique advantages of the **Gillette Safety Razor** than is being spent by all the combined, *so-called* safety razor manufacturers in the country, which benefits every Gillette dealer.

That this advertising is producing the desired results is a fact which we will prove to every **Gillette** dealer to his entire satisfaction.

If you are not selling the
GILLETTE SAFETY RAZOR,
Get into line, for once in it, means you are there to stay.

The "Gillette" cannot be put together in any way but the right way, and when so put together the blade is concaved and both edges are in the right position in their relation to the guards to be used with absolute safety.

Exact Size Set, Complete.

Greater Profits--- Greater Satisfaction

There are not only greater profits in handling this razor, but greater satisfaction because the **Gillette Safety Razor** is fully guaranteed, is backed by *responsible* and strong financial interests, and the razor itself is already endorsed by several hundred thousand users who are voicing its merits throughout the civilized world.

You see **Gillette** advertisements everywhere, and up-to-date dealers are joining our ranks every day.

Do not delay, but write us *at once* and let us show you evidence of such a nature that will make you regret the delay which for some reason unknown to us, has resulted in your name not being on our list of dealers.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Abilene, Texas.—Ed. S. Hughes Company has been incorporated; capital stock, $200,000. Purpose, to buy and sell Hardware implements, vehicles, etc. Incorporators: Ed. S. Hughes, A. S. Payton, of Abilene, and P. S. Stokes, of Big Springs.

Belhaven, N. C.—J. K. Voliva & Co. have recently opened up a Hardware store.

Cambridge, Mass.—H. Pill & Bro. have been incorporated to deal in Hardware and cutlery; capital, $3,000. President, Jacob Pill; treasurer, Hyman Pill; clerk, Samuel W. Pill.

Decatur, Tex.—Carpenter & Kendall have recently engaged in the Hardware business.

Detroit, Mich.—The J. R. Stirling Co. has been incorporated. Capital, $15,000.

Concordia, Kan.—A. Linville has engaged in the Hardware business.

Mammoth Springs, Ark.—The Mammoth Springs Hardware Company has been incorporated. Capital, $25,000. The corporators are: B. F. Elder, president; T. H. Morris, W. C. Morris, G. C. Burford, R. A. Gregory, L. N. Sedgewick, J. A. Sigler, W. B. Pace and H. F. Northcutt.

Minneapolis, Minn.—M. F. Dressler is erecting a two-story brick building in which he will engage in the Hardware business.

Newbern, N. C.—The Whitford Hardware Company has been incorporated to conduct a wholesale and retail business, capital, $2,500. Incorporators: John Hardy, Daniel H. Whitford and Mrs. Laura E. Williams, all residents of Newbern.

Little Rock, Ark.—The Grummer Hardware Company has engaged in business here.

Mt. Pleasant, Mich.—The R. C. Ullrich Hardware Co. has been incorporated; capital, $28,000.

Fort Worth, Tex.—The Alston-Gowdey Hardware Co. has been incorporated with a capital stock of $10,000.

Pomeroy, Wash.—J. R. Stevenson is erecting a two-story brick building, 60x85 feet, where he will engage in the Hardware business.

Portsmouth, Va.—Virginus Johnson has opened up a Hardware, tinware and house furnishing store.

Toledo, Ohio.—The Standart-Simmons Hardware Company has been incorporated; capital stock, $200,000, by Wm. H. Standart, Frank E. Moulton, Charles H. Russell, Daniel Segur and George P. Kirby.

Changes.

Amsterdam, N. Y.—The Hardware business of Irving J. Larrabee was taken over this morning by Charles A. Peek, of New York. The business will be continued in the present location, at least for some time, and incorporated under the name of Charles A. Peek.

Bangor, Me.—The J. and H. L. Willington Hardware Company, which was burned out in the May fire, have opened their business in a new building.

Birmingham, Ala.—The Prowell Hardware Company will October 15 absorb the local branch of the Gray & Dudley Hardware Company, which company will retire from the Hardware business in Birmingham. The Prowell company, in order to execute its present plans, will increase the capital stock to $150,000.

Carlton, Okla.—C. W. Ashley has purchased the Hardware stock of F. L. Chronister.

Cawker City, Kan.—John Domino has purchased the business of the Cawker City Hardware Co.

Cedar Falls, Iowa.—The Johnson & Wyth Co. has succeeded the Cedar Falls Hardware Co. in the Hardware, heating and plumbing business.

Cherokee, Iowa.—F. F. Leonard has purchased the Hardware store of P. H. Brison.

Clinton, Ind.—The Hardware stock of Charles Whitcomb & Co. has been purchased by Dr. K. A. Adams, Roy Staats and Bert Reynes. The old firm has been in business here for the past thirty years. The new firm will take possession November 1.

Cohoes, N. Y.—Pete and Edwin D. Stiles, of this city, have purchased the Hardware business from Paul H. Andrae. Alterations will be made in the store, and a complete line of up-to-date Hardware, stoves and ranges and a general line of house furnishing goods will be placed on sale.

East Sedalia, Mo.—J. M. Dobel has added a new store to his place of business, in which he will deal in Hardware supplies.

Ebensburg, Pa.—Shettig Brothers, Hardware firm, have purchased the Hardware stock of E. M. Stiffler, at Nant-y-Glo, and will close out the business there.

Elmira, N. Y.—G. A. Gridley & Son have entirely remodeled and re-equipped their Hardware store, which was partly destroyed by fire, and are again engaging in the Hardware business.

Elton, Iowa.—F. J. Croff has sold his Hardware business to Haven & Co.

Ferndale, Wash.—P. E. Wallin has sold his Hardware store in Ferndale, Wash., to Kaas & Hoverson.

Galveston, Texas.—Boddeker & Lyons, dealers in general Hardware, whose store was recently destroyed by fire, report that the rebuilding of their wareroom is progressing rapidly, and they expect to be in shape again in about two weeks.

Greenwich, Conn.—George Geibel and T. J. English, of Waterbury, have purchased the interests of F. W. Jaynes in the Jaynes Hardware Co., and are conducting the business under the same name.

Hutchinson, Kan.—The Colladay Wholesale Hardware Co. are erecting a new warehouse.

Haverhill, Mass.—The Hanscom Hardware Company has purchased the business of George E. Durgin. The store will be completely renovated and placed in proper condition to transact an up-to-date Hardware business.

Le Roy, N. Y.—Harry J. Stickney, who has been connected with the Taft Hardware store for the last two years, will go to Akron on November 1, where he will open a Hardware store and engage in business for himself.

Lewiston, Me.—Benjamin L. Furbish has purchased the Hardware business which for many years was conducted by his father, the late John Furbish.

Morris, I. T.—Gordon & Meeks have sold their business to the Morris Hardware Co.

Mullin, Tex.—Kemp Bros. have purchased the Hardware business of Summy & Abscher.

New London, Iowa.—Ed. M. Lee has sold his Hardware business to Walker Bros.

North Platte, Neb.—H. M. White has sold his Hardware business to Blake Maher.

Owatonna, Minn.—John Roell has sold his interest in the Thompson-Roell Hardware Company to J. M. Thompson, who will continue the business.

Parkville, Mo.—A. M. Maderia has purchased the Hardware stock of Ernest Zeitz.

Port Huron, Mich.—J. B. Sperry will add a toy department to his Hardware store this Fall.

Roseburg, Ore.—Churchill & Woolsey have been succeeded in the Hardware business by F. H. Churchill.

Steamboat Rock, Iowa.—J. L. Foster has succeeded in the Hardware business of Foster & Smith.

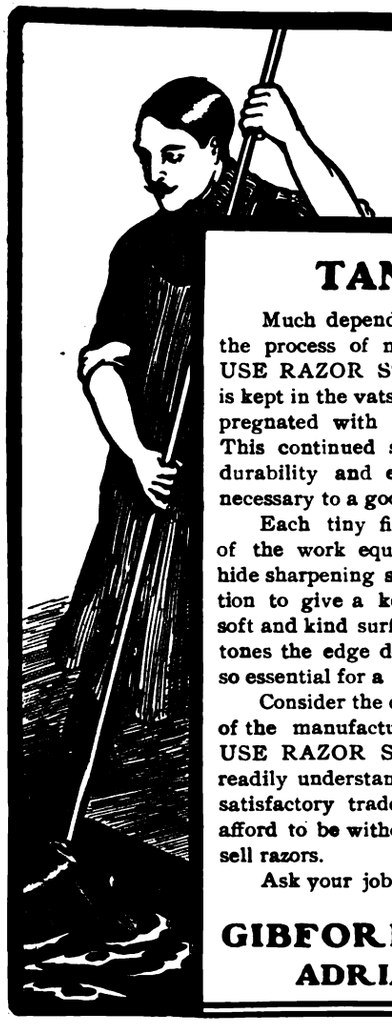
Seymour, Conn.—The new storehouse of the Seymour Lumber & Hardware Co., which has been in course of construction, is completed.

Union, S. C.—The Oetzel Hardware Co. have purchased two new stores, into which they will move about December 1st. This will give them a large double storeroom, and they will add to their already extensive line of Hardware, buggies, wagons, harness and everything in the farming implement line.

Verdigris, Neb.—Dozbaba & Studney have succeeded to the Hardware business of Ruda & Dozbaba.

Washington, Iowa.—T. J. Brus has purchased the Hardware business of Mann & Lemley.

Youngstown, Ohio.—The Wilkins-Leonard Hardware Company are erecting a $7,000 warehouse.



Fires.

No. Tonawanda, N. Y.—The Knapp-Cramer Hardware Company sustained considerable damage recently by fire, the loss amounting to between $20,000 and $30,000. When prepared to start business again the company expect to resume on a larger scale than previously.

Hammond, La.—The loss by fire at the Hardware store of the Baltzell-Donaldson Company, Ltd., whose place was partially destroyed recently, will total $6,000.

PATENTS
procured promptly and with care in all countries. Also trade marks and copyrights.

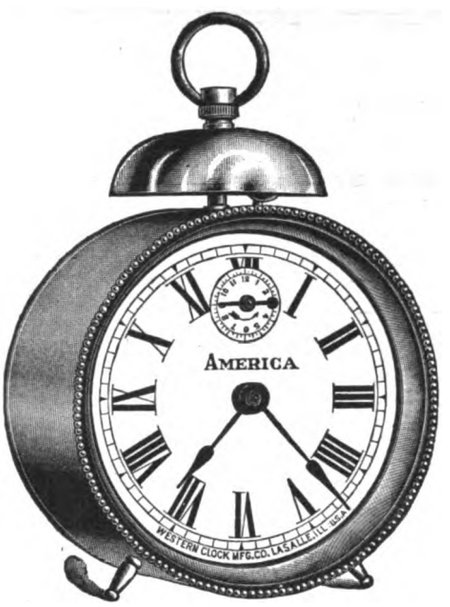
TANNING

Much depends on this first step in the process of making RED-E-FOR USE RAZOR STROPS. The leather is kept in the vats until every part is impregnated with the preserving liquid. This continued steeping insures great durability and eveness of texture so necessary to a good strop.



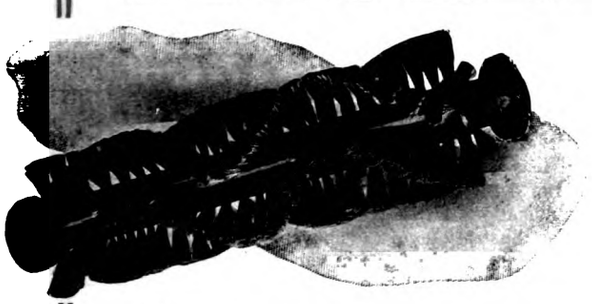
Each tiny fibre bears its portion of the work equally, giving the horse hide sharpening strop the requisite friction to give a keen cutting edge and a soft and kind surface to the finisher that tones the edge down to the smoothness so essential for a good shave.

Consider the care used in every step of the manufacture of RED-E-FOR USE RAZOR STROPS and you will readily understand why they prove such satisfactory trade producers. Can you afford to be without them? Not if you sell razors.

Ask your jobber for a sample doz.

GIBFORD MFG. CO.
ADRIAN, MICH.

The America Alarm



Gives you an opportunity to offer a clock, accurate, efficient, guaranteed, at a remarkably low price and is sold at a figure that leaves you plenty of room for profits. Your jobber has the "America."

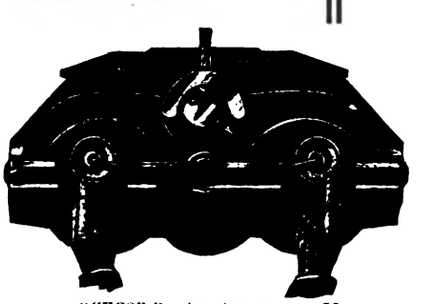
BISSELL'S *THE SWEEPER OF QUALITY*



The carpet sweeper being strictly an article of utility, its merit and value is determined by its mechanism, durability, sweeping qualities, etc., and not by exterior embellishment. The prerequisite in a carpet sweeper is a high grade brush, with the necessary propelling power to insure its positive rotation on all grades of carpets.

BISSELL'S

"CYCO" BEARING SWEEPERS

Alone contain brushes with bristles sufficiently long to insure the best results in sweeping, and which add materially to the life of a sweeper. "Cyco" Bearings produce the best friction that man has yet devised for insuring the positive and constant rotation of the brush on all grades of carpets. Full 2¾ inch best quality grey bristles from which Bissell brushes are made, cost more money than shorter bristles, but it means better brushes, better sweeping power and longer life to the sweeper. The Bissell is the sweeper of quality and reputation, and as a well known manufacturer and advertiser has said, "Quality lingers in the memory long after the price is forgotten." Write for our special Fall Fair Offer.

"CYCO" Bearings insure positive rotation of the brush on any grade of carpet.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, Etc.

Beaumont, Tex.—A new stove factory is being erected here, with a capital of $40,000.

Camden, N. J.—The Wonder Manufacturing Co. has been incorporated to manufacture stoves, heaters and furnaces, etc.; capital, $125,000. Incorporators: T. E. Moore, D. E. Lindley and M. A. McKee.

East Orange, N. J.—Duplex Steel Plate Piling Co. has been incorporated to manufacture steel articles, machine work, foundry and rolling mill; capital, $500,000. Incorporators: Walter Scranton, John R. Williams and Charles C. Gill.

Franklinville, N. Y.—The Ontario Knife Co. is erecting a factory here.

Franklin, Pa.—The Hough Pump Co. has been incorporated with $50,000 capital.

Groton, S. D.—The Groton Foundry & Manufacturing Company has been incorporated for $50,000, to do a general line of foundry and machine shop work. It will manufacture a kerosene oil burner for cooking and heating stoves.

Hartford, Conn.—The Archambault Company has been incorporated; capital stock, $5,000. The company will manufacture all kinds of machinery, implements, etc. The incorporators are: Ellis B. Baker, George A. French and Albert C. Bill.

Indianapolis, Ind.—The Hussey Farm Tool Company has been incorporated; capital stock, $100,000. Directors: Ray W. Hussey, Joseph D. Hyde and Tilmand Smith.

Lockport, Ill.—The National Broom Factory is erecting a large plant here.

Nashville, Tenn.—The Bryant & Drake Mfg. Co. has erected a plant for the manufacture of lawn mowers. Capital, $25,000.

New Albany, Ind.—The Great Central Steel Range Co. is erecting a large factory, 60x100 feet in size, and five stories high, for the manufacture of steel ranges.

New York, N. Y.—Popular Service and Novelty Introduction Corporation has been incorporated to manufacture household articles; capital, $10,000. Directors: Lawrence Waters, Robert McInerny, W. M. Keane, New York.

New York, N. Y.—Usona Light Co. has been incorporated to manufacture light mantels, gas burners, etc.; capital, $100,000. Incorporators: Henry Kreuder, William Mahler, J. William Hill.

Springfield, Mass.—The Perfection Grate Company has been incorporated with a capital of $3,000. Frank W. Redlon is president; Grace E. Spooner, treasurer, and Nelson J. Hubbard and Theodore F. Handy, directors.

Shelbyville, Ill.—The Frank M. Patten Mfg. Co. is erecting a factory for the manufacture of hay tools.

Tuscumbia, Ala.—The King Stove & Range Co. has been incorporated with $100,000 capital for the purpose of manufacturing stoves, ranges, hollow ware, metal castings, agricultural implements, etc. Its incorporators are George E. King, W. H. Martin, F. H. Jackson and W. E. Werrill. The former is president and W. H. Martin treasurer, vice-president and manager.

Williamsport, Pa.—Andet Novelty Tool Works has been incorporated. Capital, $5,000.

Woodstock, Ont.—The Canadian Tool Company, Limited, has been incorporated; capital, $100,000. The directors are: Edwin G. Law, Joseph Stickney, Arthur J. Downing, James J. Terry and Theophilus L. Wilson.

Changes.

Buffalo, N. Y.—Sidney Shepard & Company, manufacturers of tinware, is to be reorganized a joint stock company and will be capitalized at $1,500,000.

Chattanooga, Tenn.—C. S. & F. S. Stokes are erecting a new plant for the manufacture of tools, and will discontinue their business in Saginaw, Mich.

McKees Rocks, Pa.—The Star Enameling & Stamping Co. are erecting a large factory building and their business will be removed from Allegheny, where the plant is at the present time.

McKees Rocks, Pa.—Jackson Brothers, manufacturers of hand-made mechanics' tools, are enlarging their plant along the P. C. & P., near the White Bridge. The new structure is being constructed of concrete and is being erected over the present plant, which will be kept in operation.

Rochester, N. Y.—The Rochester Non-Rust Tinware Co. is erecting a new plant and expect to occupy same this Fall.

Richmond, Ind.—The Richmond Shovel and Tool Company has filed notice of dissolution of that corporation. The directors of the company are: J. Newton Cole, of Andover, Mass.; Herbert Goff, also secretary and treasurer, of Andover, Mass., and Myron P. Lewis, of Somerville, Mass.

St. Paul, Minn.—The White Enamel Refrigerator Co. has secured building permits for the erection of five one-story brick buildings and one frame building at its plant on the south side of University Avenue, between Albert and Hamline avenues. The new structures will cost $19,500.

Syracuse, N. Y.—The Continental Can Company, which was incorporated a year ago and now has large plants in this city and Chicago, in opposition to the American Can Company, commonly known as the trust, will move its Rochester machine shop to this city. The company is capitalized at $500,000. The officers are: President, T. G. Cranwell; vice-president, A. W. Norton; secretary and treasurer, F. P. Assman. The officers, with J. C. Taliaferro and B. H. Larkin, are the directors.

TRADE DIRECTORIES IN CONSULATES.

Counsul H. W. Harris, of Mannheim, Germany, calls attention to defects in certain trade publications that are sent to consuls. He says:

Among the publications received at consulates are numerous more or less complete lists of American manufacturers and traders. Though not printed solely for consulates or foreign buyers, stress is usually placed by the publishers on the value of these publications for reference in the consulate and as aids in bringing the trader and his foreign customers together. While such books are of much value, their usefulness is apt to be lessened by either one or both of two chief defects, namely, the omission of the names of many excellent concerns and the insertion of those less worthy, and the omitting of anything to indicate whether the concerns named are engaged in foreign trade.

The first defect naturally arises from the fact that the publications are usually, if not always, prepared as a private enterprise, and the names of those firms only appear which desire to advertise in the book. The other defect could in most cases be corrected by giving the address of foreign agents or otherwise. As is well known, many first class American concerns are fully occupied with domestic trade and do not care to sell in a foreign market. Manufacturers and trades usually fall into two classes—those who trade abroad and those who do not. The foreign buyer is not seeking the concern that is indifferent whether it sells abroad or not and which will fill an order only for cash and without further responsibility after the merchandise is placed in cars. He is seeking the concern which is seeking him and is willing to go half way in the matter of trade.

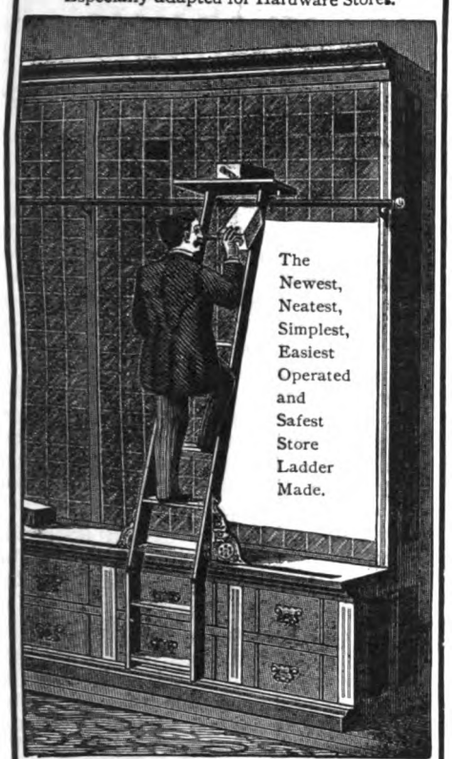
The fact that the American firm has its agents in London, Hamburg or elsewhere is evidence on its face that the concern is at least attempting to do business abroad. The fact should appear in lists of American traders for use in a consulate or in the hands of a foreign buyer.

Two publications lately received at this consulate may be referred to as illustrations of the above. One while fairly complete, omits many well known firms in various branches and inserts the names of others less well known and less reliable. It makes no claims to insert the names of other than its "members." It gives however, the addresses of the foreign agents of those having such agents, and is excellent in this respect. The other directory, a book of some 400 and more pages, gives exhaustive lisst of manufacturers in certain branches, but no clue to what part of these manufacturers are engaged in the foreign trade. For example, eighty different firms manufacturing a certain machine are named. Probably five or six of these have foreign agents. The other probably would not consider an order for a single machine at all.

CAUSE FOR THANKS.

Mrs. Bacon—Who was that man you were bowing and scraping so to at the front gate just now?

Mr. Bacon—Oh, that's the instalment man. He's just been taking the piano away from next door, and I was thanking him.—*Yonkers Statesman.*



REBUKED.

"Father," said a boy of 12, "can you tell me who Shylock was?"

"What!" exclaimed the father in an aggrieved tone, "have I sent you to Sunday-school for the past six or seven years only to have you ask me who Shylock was? Shame on you, boy! Get your Bible and find out at once!"—*Lippincott's Magazine.*

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Allentown, N. J.—Allentown Non-Freezing Powder Company has been incorporated by Chas. G. Schanley, Joseph R. Moreland and Albert M. Barnes. The company is to manufacture and deal in powder and other explosives.

Los Angeles, Cal.—The Dyas-Cline Sporting Goods House at 116 West Third Street, is now open for business. B. H. Dyas, for years one of the hardest workers for amateur athletics in Southern California, and George T. Cline are the proprietors. The house will handle a complete line of guns, ammunition, gymnasium equipment and sporting goods of every kind.

Norwalk, Conn.—It is reported that the incorporators of the new Federal Cartridge Co., organized with several million dollars capital, has selected a site here. If the town is successful in obtaining this new company, it will add thousands to the population, for they no doubt will start out with many orders, as it is expected that they will secure large contracts from the U. S. Government and foreign countries.

Palo Alto, Cal.—F. E. Peterson has leased the building on Alma Street, occupied at present by the Dudfield Lumber Company's offices, and will open an automobile garage and machine shop by the 1st of October. The location will be convenient and the equipment one of the best between San Francisco and San Jose.

Rome, N. Y.—A new company has been organized in this city for the manufacture of automobile radiators, spiral tubing and other metal specialties. The incorporators are Dr. W. L. Kingsley, Hon. T. H. Stryker, G. W. Turney, J. S. Haselton, of Rome, and J. B. Long, of Chicago. The capital stock is $50,000, all paid in. Dr. W. L. Kingsley is the president. The new concern will be located in the plant recently vacated by the Utica Industrial Company, south of the New York Central Railroad, on the banks of the Erie Canal. The incorporate name of the company is the Long-Turney Manufacturing Company, and it is a branch of the Long Manufacturing Company, of Chicago.

Worcester, Mass.—The Mills Woolen Cartridge Belt Co. have organized with a capital stock of half a million dollars. The company is the successor of the Anson Mills Woven Cartridge Belt Co. The capital stock of the corporation is divided into 5,000 shares. The par value is $100. The entire capital stock is now to be divided as follows: Cash, $280,000; machinery, $73,000; merchandise, $2,000; patent rights, $50,000; good will, $75,000; services, $20,000.

Changes.

Abingdon, Ill.—Through the efforts of Andrew C. Woods, of the Greenslade Oil Co., the Animal Trap Co. will remove its plant to Detroit, Mich. The company manufactures mouse and game traps exclusively and employs 125 men. It is expected that at the new location the number of men will be doubled.

Franklin, Mass.—George W. Hosie has purchased the bicycle business of Floyd D. Hosie & Co., and will consolidate it with his Hardware stock in the Hosie Building.

Chicago, Ill.—The Armac Motor Company, formerly of St. Paul, Minn., have reincorporated under the laws of the State of Illinois, with a capital stock of $50,000, and are now located at the corner of Sheldon Street and Carroll Avenue. E. W. Keller is president of the company, A. J. McCollum, vice-president, and E. S. Messervey, secretary and treasurer.

Huntsville, Tex.—Kneeland & Moore have bought the retail Hardware, stove and sporting goods business formerly conducted by W. W. Randolph.

Tacoma, Wash.—E. E. Peterson, formerly associated with the Kimball Gun Store, has formed a partnership with G. A. Bunting and purchased the stock of F. B. Shank. They will add a complete stock of sporting goods and bicycles.

Miscellaneous.

Five hundred Remington rifles were shipped recently to Havana on the steamer Morro Castle. These arms, consigned to private individuals in the Cuban metropolis, were shipped by M. Hartley & Co., of New York. The rifles were packed in fifty cases, each containing ten. On the official manifest, besides the entry of this shipment, were written the words "For sporting purposes." The sale of arms during the Presidential campaign has been prohibited by the Cuban Government.

Homestead, Pa. — The Monongahela Trust Co. was appointed receiver on September 12, by the Kilgore & Atkinson Sporting Goods Co., of Homestead, Pa. In the bill in equity filed in Common Pleas Court, No. 2, the company has debts of $18,000, while the assets are said to be valued at $25,000 in addition to a building on a leased lot. The business was originally established by Kilgore & Atkinson in 1897.

The secretary of the Cyclists' Touring Club has just been informed officially that the motor bicycles of its members who wish to tour in France may pass the French custom houses without payment or deposit of duty; in fact, that in future members of the Cyclists' Touring Club may enter into France with their motorcycles under the same conditions as with ordinary cycles. This concession not only throws open France, but the whole of Europe free of duty to the members of the Cyclists' Touring Club furnished with the necessary ticket, as members of the club have already been granted free entry with their motorcycles into Germany, Holland, Belgium, Italy and Switzerland.

The bicycle industry is still flourishing in Great Britain. One firm of makers has just placed contracts for a new building amounting to over £35,000.

The cycle industry in Switzerland is becoming of greater importance each year, but the trade has to rely solely on imports, the local production being very small. During the period of 1899-1903, covering five years, 74,500 bicycles were imported in Switzerland, which were valued at $3,280,000. Of the total number of imported machines Germany supplied 49,500; France, 12,500; the United States, 6,000, and the United Kingdom only 1,700. The import for the year 1903 amounted to 17,170 finished cycles, which is far above the average for the period mentioned.

Fires.

Derby, Conn.—Fire in the building known as Annex No. 6 of the United States Rapid Fire Gun and Ammunition Company caused the destruction of the building and contents. The building was a wooden structure and contained tanks of oil for hardening shells by a process. In some way an explosion in one of the tanks set fire to the oil, which blazed up with such rapidity that it was impossible for the firemen to more than save the adjoining buildings of the factory. In addition to the building between 700 and 800 shells in the process of finishing were destroyed. The loss is $5,000, partially covered by insurance.

Philadelphia, Pa.—Fire of unknown origin completely destroyed the three-story brick building of the Joseph H. Masland hammock factory on September 5. Loss, $10,000.

Saratoga, N. Y.—The bicycle and automobile establishment of Fred. Hawkins was totally destroyed by fire recently; insurance not stated.

HANDLE MEN TO FORM COMBINE.

The Consolidation of Many Plants—Capital Is About $4,000,000.

Routine details, checking over books, etc., are all that stand in the way of a combination of all handle manufacturing plants in the United States. This includes the plants of the Southern Handle Co. and of the Hartzell Handle Co., in Memphis. It is thought by M. R. Grace, president of the Southern Handle Co., who is promoting the project, that the deal may be closed in a very short time.

Options have been secured on every handle manufactory in the United States. There are twenty-seven plants in all, located in various parts of Ohio, Indiana, Illinois, Alabama, Kentucky, Tennessee nad Texas. The aggregate capital of these plants is about $4,000,000 and the combined annual output runs into the millions of dollars. It was first planned to make the transfer of stock of twenty-four of the companies September 1. Three of the smaller companies had refused to enter the proposed combine. At almost the last minute the officers of these companies gave in, and at a meeting held in Chicago final terms were agreed upon. Mr. Grace refused to say as to how the purchased plants will be paid for. It is reported, however, that stockholders of the old companies will be given a chance to sell their holdings for cash or to take stock in the combination. New York and Eastern capitalists, who are financing the deal, will purchase the stock of all who desire to sell for cash.

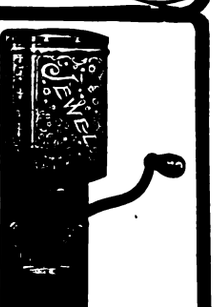
That is the one secret of success in the Hardware trade.
The rapid sales and quick turning over of capital that

A Line of Arcade Goods

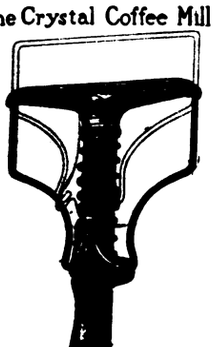
will produce is a revelation to Hardware dealers, and there is a reason for it. Consumers know the excellent quality that the name Arcade signifies. They know that it stands for the highest satisfaction and greatest efficiency that their money can buy. It is this knowledge that makes them demand Arcade Goods when they are in need of any of the 300 articles we manufacture.

To prove their unquestionable merit to any doubting dealer we will send a sample of any article desired.



We show on this page four articles that are money-makers for the dealer.

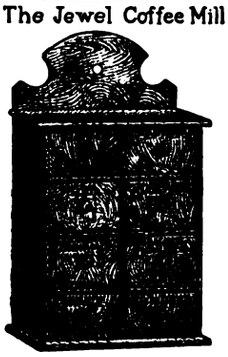
The Crystal Coffee Mill



THE CRYSTAL COFFEE MILL with glass hopper and tumbler. This is the most perfect mill made and with it the most discriminating customers may be interested. Its superior advantages are appreciated on sight.

THE JEWEL COFFEE MILL with glass canister holding one pound of coffee. This is a companion of the Crystal, but sells at a lower price. A liberal dose of these two mills will prove a tonic to your coffee mill trade.

The Jewel Coffee Mill



You can satisfy every requirement of your trade with one of the sixty different styles of wood, glass and metal mills which we manufacture.

The Gem Mop Head.

THE FAMOUS GEM is known to housekeepers everywhere as the one dependable mop head. It is made of the best steel and equipped with the latest improved spring adjustment. It is a most durable, saleable and profitable article.

THE RIGHT SPACE SPICE CABINET is made of hard wood in natural finish. It is strongly built to withstand the roughest usage. Each compartment is labeled and fitted with iron pulls. The general effect is one that appeals to the careful housewife.

A Square Deal

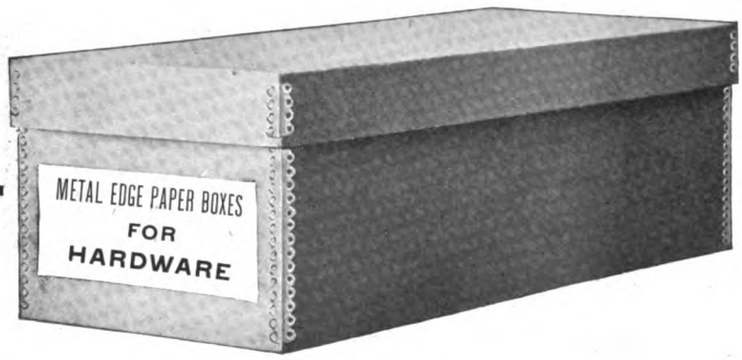
— FOR —

Square Dealers

Square dealers, we take it, are those who try to give their customers goods that are "square" — honest all through. For forty years we have been giving all dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public, of all the world, about their merits. Square Dealers *distribute* them — they are already *sold*. Just ahead is the big demand for

"ENTERPRISE"



Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.

Increase your sale of "Enterprise" Meat and Food Choppers by using our new booklet: "The Cook, Her Critic and—". We will send you a supply of these on request.

TALKING POINTS
FOR
RETAIL HARDWAREMEN

When a customer asks for a particular thing, it is very necessary that he be correctly informed regarding it. In other words you must "show him."

Now, take a SWATY HONE for instance. Imagine you have a customer in front of your show-case. You may lay that Swaty Hone before him with these positively true words:—

"That hone, sir, is a famous SWATY, the very name of which is a guarantee of its superior quality. It is manufactured abroad under conditions of the greatest care."

Have Your Clerks Read This

"The keen edge of a razor must be smooth. The Swaty Hone does that, and also gives that soft, gummy edge so greatly desired. One of the best features of that hone is the fact that it takes hold instantly and does its work so very quickly. Barbers say they can hone up a razor while a customer is in their chair and not have him notice any delay, if they use the Swaty hone. In the biggest shops in New York City, where haste is so necessary, the Swaty Hones are exclusively used."

"Seventy-five cents, sir, is all it costs. May I send it or will you take it with you? Send it? Very well."

"Good day. Come again."

The above is authorized by the

PIKE MFG. CO.

Pike, N. H.

P. S. The Pike Mfg. Co. are now putting up assortments of Razor Hones, which are convenient and display hones to advantage. A postal will bring full information

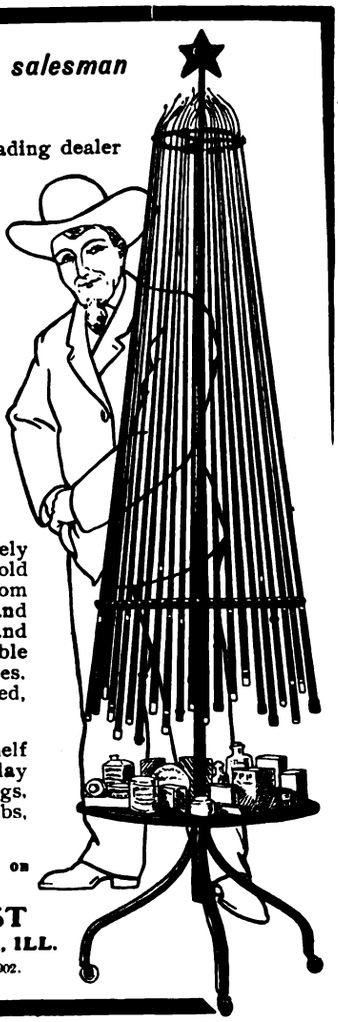
Remember: If you'll send us the particulars about any room, we'll submit drawings and prices.

Name anything you wish in the way of metal ceilings, or walls for rooms of any size, shape, kind or purpose and the Original Northrop Metal Ceilings will fill the bill.

The latest and the best designs in metal ceilings are finely illustrated in our new catalog. You ought to have a copy.

Every Hardwareman ought to handle Northrop's Metal Ceilings because any mechanic can put them up.

NORTHROP, COBURN & DODGE CO., Manufacturers



40 Cherry Street, New York

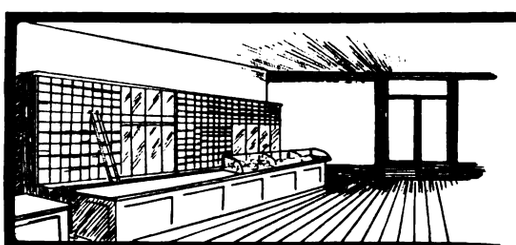
MENTION HARDWARE

"The best silent salesman I ever saw,"

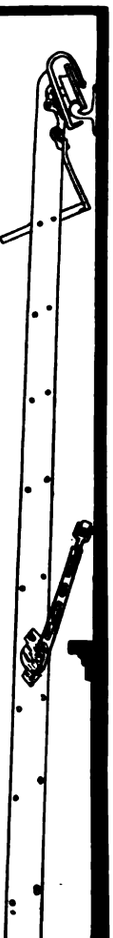
writes W. L. Skinner a leading dealer of Dunkirk, Ind., in a letter commending the

Best Portable Revolving Whip Rack and Display Stand.

It brings the whips out where they are seen and displays them in such an attractive manner that they catch the customer's eye at once.



The stand is durably made of steel, handsomely enamelled in Blue with Gold trimmings. It holds from ½ to 1½ gross of whips and keeps them straight and elastic. Hight adjustable from 8 ft. to 9 ft. 10 inches. Weight 80 lbs. Boxed, 100 lbs.



The Revolving Shelf makes an attractive display of Greases, Oils, Dressings, Liniments, Brushes Combs, etc.

Catalog with Prices mailed on request.

JOHN H. BEST
1905 10th St. GALVA, ILL.

Patented May 1, 1900—Oct. 2, 1902.

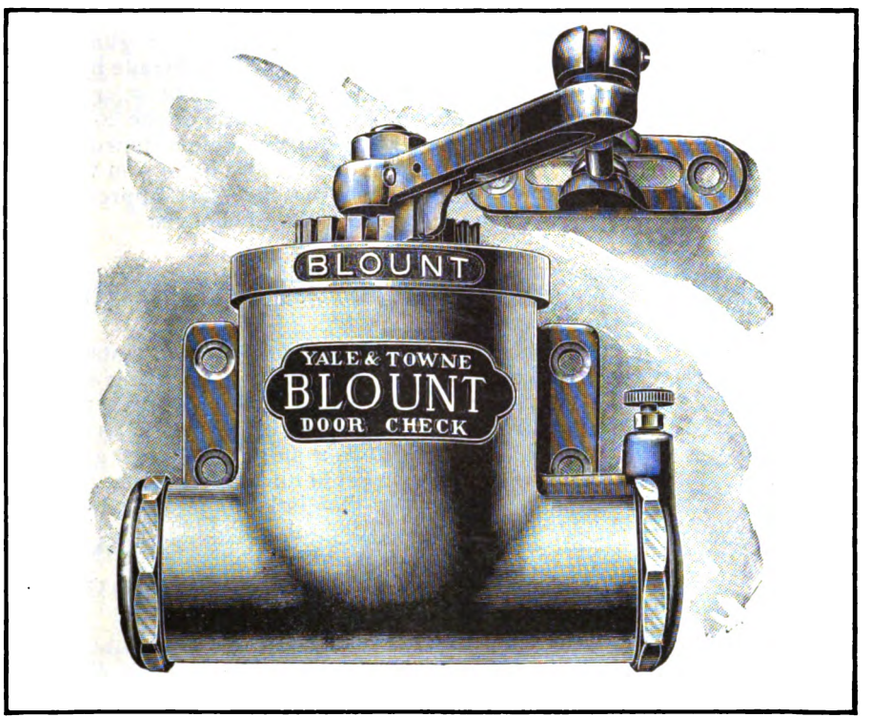
DON'T MOVE

You can increase the size of your store without increasing your rent by installing one or more

Milbradt Rolling Step Ladders

They make it easy to utilize the space between the top shelf and the ceiling for extra shelvings and boxings.

Milbradt Ladders are made to order from measurements covering the conditions peculiar to each store.



They combine great strength, easy and noiseless operation and handsome finish at a cost that is as low as the price for ready made ladders.

Style No. 4 (shown in outline), a ladder for use on shelving with very narrow or no base. The swinging arms hold the ladder in the position most convenient for climbing. These arms may be swung up allowing the ladder to hang close to the shelves when not in use. Rubber rollers are attached to these arms and run against the base. This is a most convenient ladder for use in narrow aisles or in stock and store rooms.

Our latest catalog illustrates 14 other standard styles adapted to every form of shelving. It will be mailed on request.

The Blount Door Check is a Great Seller

because it is popular—it's popular because it's good; it's good because it's well designed and *well made*—better made than any other door check, and from better material. ¶ Experience has shown that the Blount Door Check and Spring will give perfect satisfaction under conditions that send checks of other makes to the repair shop or scrap heap. ¶ The Blount Check is well advertised and we assist dealers to give it local publicity. To those who handle the Blount Check, we furnish, on request, illustrated printed matter as listed below, bearing name and address of dealer. (Our name and address does not appear.) Write us for samples of our

Blount Check Catalogues,
Blount Check Brochures,
Blount Check Folders,
Blount Check Envelopes,
Blount Check Seals,
Blount Check Display Cards,
Blount Check Electrotypes for Advertising

and state quantities wanted; also send your card or letter head for the printer's use. ¶ We have a number of ideas that *sell* Checks: ask us about them when writing for the above samples.

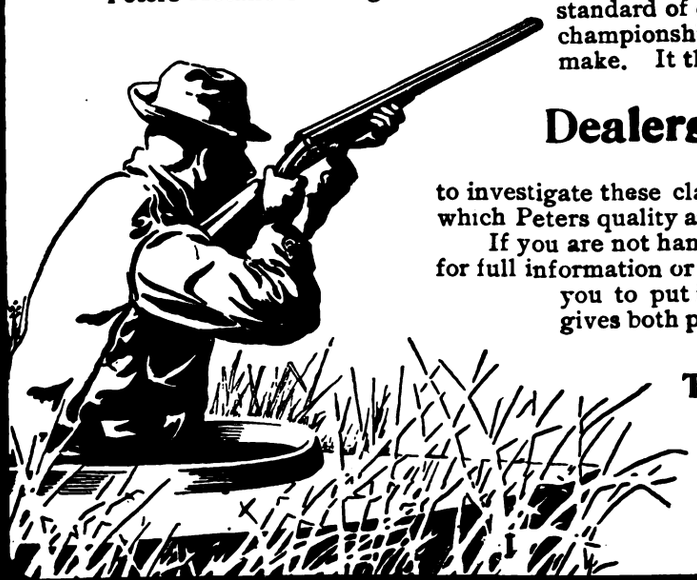
A Clean Shot



One of the beauties of **Peters** "Referee" shells is their clean way of bringing down game. They develop as much velocity and killing power as smokeless. Being loaded with semi-smokless powder, they are extremely clean and do not foul the gun.

Peters "League" loaded with black powder is the best shell of its grade on the market.

Peters smokeless shells, "Ideal," "Target," "High Gun," and "Premier" are preferred and used with great success by multitudes of sportsmen in every section of the country.

Peters Metalic Cartridges loaded with the famous Semi-Smokeless powder have attained a standard of quality and have won victories in the great championship matches, not approached by any other make. It therefore behooves

Dealers in Ammunition

to investigate these claims and take advantage of the business which Peters quality and Peters advertising are making.

If you are not handling this line at present, ask your jobber for full information or if you prefer, write us direct. It will pay you to put in a stock of Peters goods, the line that gives both profit and satisfaction.

NIAGARA COW CHAINS

"OHIO" PATTERN

Provided with our latest patented attachments. Steel Swivel and Ring--Two Toggles.

"DE KOL BUTTER BOY PRINCE"

REGISTERED HOLSTEIN-FRIESAN BULL, NO. 30,369.

NIAGARA COW TIES are an indispensable necessity in the new "Model" Dairies, which are being formed on so large a scale, and which are becoming so numerous and so successful throughout the country; for here, an equipment which provides not alone for a neat and attractive appearance but also for the actual welfare and security of the animals, is a matter of paramount importance. The adoption of **NIAGARA COW TIES** is now considered the first step toward attaining to the modern standard of improved Dairy conditions.

Every Hardware dealer should carry NIAGARA COW TIES in stock.
Your customers will ask for them.

PRICES CURRENT

The prices in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

The Wiederhold Inverted Light

LIGHT COMPLETE
Price $1.50
GLOBE REMOVED

The Best--Because
It never flashes back, blackens mantels nor smokes. Does not flicker.
It's ornamental, durable and gives
50 Per Cent. More Light
at less cost for gas and mantels. Fits any fixture—burns all kinds of gas.
Mark: Its Rays Are Downward.
We want a representative in every town. Write us.
The WIEDERHOLD LIGHT CO.
96 Warren St., New York

Contrasts
between the Candle flame and "Automatic" light are of course pronounced, but there are differences just as radical between the
AMERICAN AUTOMATIC LIGHTING SYSTEM
and other kinds. The American Gas Machine gives a light that costs less per candle power than any other machine made. It requires no hand regulation, the machine doing this automatically. The light is steady, brilliant nd powerful, but not tiring to the eyes. It is safe, durable and simple and with reasonable care will last for years.
Catalogs and estimates free on request.
American Gas Machine Co.
Albert Lea, Minn.

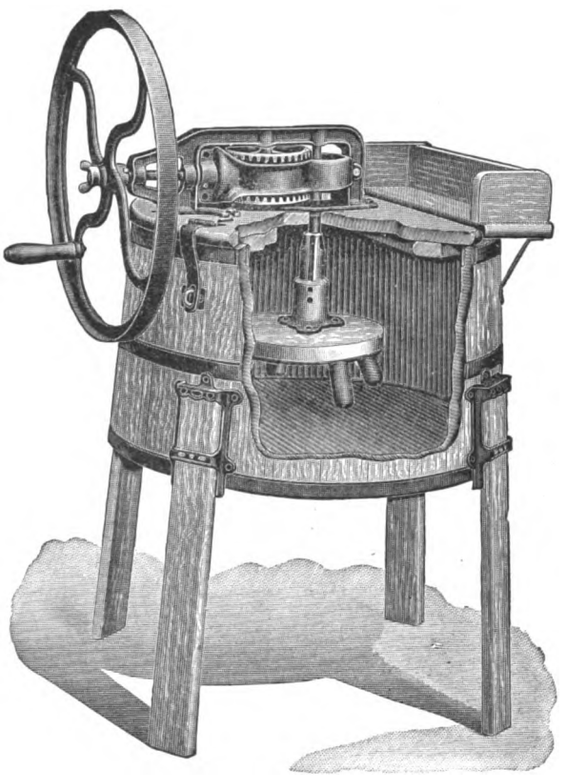
"BOSS" WASHING MACHINES

Illustrations represent our two best selling washers.

They are non-competition, therefore, most profitable to handle and sell.

Write at once for catalogue and price list, also our nearest distributing point to your location.



The only line of Washers not found in the catalogues of Catalogue Houses, therefore appeal to every dealer for support.

ADDRESS

Boss Washing Machine Co.

CINCINNATI, OHIO

BOSS DOUBLE ACTION

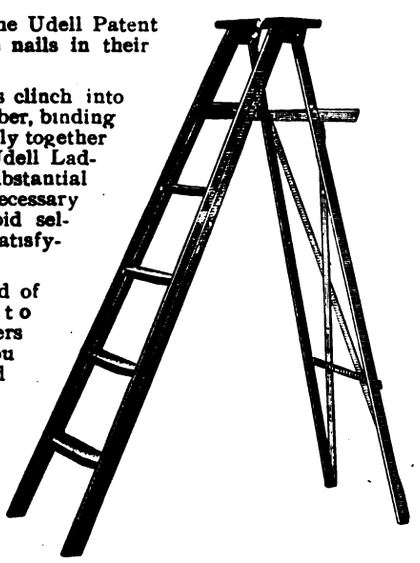
This machine is built on the true principle of rubbing clothes, similar to rubbing them on the old fashioned board, only that it just rubs a quantity at one time, and without the slightest injury to the finest of fabric including laces.

IMPROVED BOSS ROTARY

Has gears protected by shield or cover.
Has Telescopic dasher post.
Has large cypress tub and rub block.
Has either stave or detachable legs.
Has Highest Speed of any rotary.

What's In A Nail?

A great deal, when the safety of life or limb depends on it.



To insure absolute security in

UDELL LADDERS

we use only the Udell Patent Barbed Wire nails in their construction.

These Nails clinch into the tough timber, binding all parts firmly together and giving Udell Ladders that substantial strength so necessary to such a rapid selling, trade satisfying article.

Such a word of explanation to your customers will secure you certain and profitable sales. Other "Reasons why" for the asking.

A Long (K)Night In HARDWARE

¶ For years retail hardware men have been groping in the dark, looking for some efficient way to increase their business—some of them have found it!

Warren's Patent Sectional Glass Front Shelving

is designed and manufactured by a Hardware Man for Hardware Men.

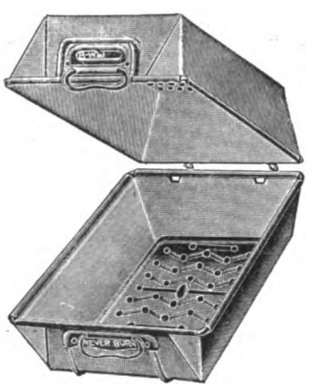
¶ You can keep a line of samples of your entire stock on exhibition at all times.

¶ It preserves each article in the same attractive newness that it comes from the factory, prevents *dust, rust, finger-marks and dirt.*

¶ It enables you to sell goods to a *German*, a *Scandinavian* or *any* other foreigner who, even though he cannot speak English can *point* to what he wants.

¶ It improves the appearance of your store *100 per cent;* enables your salesmen to spend their time *selling* goods instead of *hunting* for them, and will *pay for itself in one year.*

¶ Send dimensions of your store and let us supply you—FREE—with a color plate made to scale showing how *your* store will look when equipped with The Best Shelving in the world for your purpose.



¶ Remember the shelving is made on the unit plan—if you want to experiment—don't wish a complete outfit now—you can buy one—two—three stacks or sections—the rest will follow as your satisfaction increases.

A Square Deal

— FOR —

Square Dealers

Square dealers, we take it, are those who try to give their customers goods that are "square" — honest all through. For forty years we have been giving all dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public, of all the world, about their merits. Square Dealers *distribute* them — they are already *sold*. Just ahead is the big demand for

"ENTERPRISE"

Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.

Increase your sale of "Enterprise" Meat and Food Choppers by using our new booklet: "The Cook, Her Critic and—". We will send you a supply of these on request.

CANADIAN WHOLESALE HARDWARE ASSOCIATION.

At the Seventh Annual Convention of the Canadian Wholesale Hardware Association, held at Toronto, October 17, the following were the officers elected:

President—Mr. William Vallance, Wood, Vallance & Co., Hamilton.

Vice-President—Mr. T. H. Newman, Caverhill, Learmont & Co., Montreal.

Secretary-Treasurer—Jenkins & Hardy, Toronto.

Executive Committee—Thos. Birkett, Sr., of Thos. Birkett & Sons Co., Ottawa; Alfred Jeannotte, of L. H. Hebert, Montreal; J. G. Lewis, of Lewis Bros. & Co., Montreal; T. G. Dexter, of H. S. Howland, Sons & Co., Toronto, and D. H. Howden, of D. H. Howden & Co., London.

RECORD SHOOTING ACHIEVEMENTS.

One of the most remarkable shooting achievements of the year was placed to the credit of Mr. L. H. Reid, representative of the Peters Cartridge Co., at the tournament held at Indianapolis Oct. 9-10. Mr. Reid broke a total of 392 out of 400 targets. His score on the first day was 194 and on the second day 198, and he smashed the last 161 straight. This sort of work shows what can be done with Peters shells, and proves that they are actually not merely nominally perfection itself.

At the Hyannis, Nebraska shoot, over two-thirds of the contestants used Peters shells, and perhaps the greatest attraction of the shoot was the work of the "Nebraska squad," composed of Messrs. Hardy, Linderman, Veach, Bray and Carter. They were given a round of applause in one event when every man in the squad broke fifteen straight. They were all using Peters shells.

At the tournament held at Paris, Texas, Sept. 25-28, fully half of the shells used were of Peters make. They were shot by winners of second, third, fourth and fifth general averages. Mr. M. E. Atchison, of Giddings, Texas, won the fourth general average and high amateur average, being the only man who stood back of the sixteen-yard line. He shot from nineteen yards, and broke his targets in fine shape, thanks to the excellent pattern and velocity of his Peters factory loads.

PRIZES WON BY THE "STEVENS."

At the shoot of the well-known Zettler Rifle Club, of New York City, held September 27-28, the two leading prizes were obtained by Stevens and Stevens-Pope Rifles, equipped with Stevens Telescopes. The first prize on the ring target was secured with a Stevens-Pope Rifle, fitted with Stevens Telescope Sight. The first prize, calling for greatest number of bulls' eyes, was obtained with a Stevens Rifle, equipped with Stevens Telescope. Stevens Telescopes were used by almost every marksman who competed at this tournament and materially raised records in every individual case. The continued use of these most efficient and practical 'scopes conclusively demonstrates that these accessories are fixtures at all tournaments and prize contests. All the notable crack shots competed at this Zettler Club Shoot.

NEW YORK JOBBERS' ASSOCIATION.

At the annual meeting of the New York State Association of Hardware Jobbers, held at the Fort Orange Club, Albany, N. Y., on Thursday, October 12, the following officers were elected: President, J. H. Underwood, Binghamton; vice-president, A. J. Lowery, Utica; secretary-treasurer, Joseph Born, Syracuse; directors: Hobert Weed, Buffalo, and Irving D. Booth, Elmira.

FOREIGN COMMERCE INCREASING.

The record of the foreign commerce of the United States during August strongly reflects the prosperous condition of trade and industry. Figures just published by the Department of Commerce and Labor, through its Bureau of Statistics, show that exports of manufactures during the single month of August have increased nearly nine million dollars, or about 25 per cent. as compared with the same month of last year, and about twenty million dollars as compared with August, 1901. Meantime, the manufacturers have increased their consumption of materials imported for use in the various processes of domestic industry, the August, 1905, imports of crude articles for use in manufacturing having increased nearly two million dollars over the imports of August, 1904, while there is an increase of about fifty million dollars when the eight months ending with August of this year are compared with the corresponding period a year earlier. That class of manufacturers' materials designated as 'wholly or partially manufactured" also shows increased imports —about a million dollars during August, and over thirteen million dollars during the eight months ending with August.

During the eight months ending with August, 1905, imports of manufactures, including all degrees of manufacture, aggregated three hundred twenty-two millions, while exports of manufactures amounted during the same period to three hundred seventy-six million dollars. As recently as 1897 the records of our foreign commerce showed an importation of two hundred eighty-three million dollars' worth of manufactures during the calendar year, as against two hundred eighty million dollars' worth of manufactures exported. The following year was the first to show exports of manufactures in excess of imports of manufacturers, and since 1898 there has been a steady increase in the outward flow of the products of our manufacturing industries. During the eight-month periods of the years named exports of manufactures have increased from one hundred ninety million dollars in 1897 to three hundred seventy-six millions in 1905, while imports of manufactures have only increased from two hundred twelve million dollars in 1897 to three hundred twenty-two millions in 1905.

In nearly every class there is great activity shown, both as to imports and exports. The value of manufactures exported during the first eight months of 1905 practically equalled the total exports of manufactures during the entire calendar year 1899, being $376,198,679, as against a total of $380,787,891 for the entire year 1899. Should the commerce indicated by the August figures continue during the succeeding four months, the calendar year 1905 will show the largest volume of commerce, both as to imports and exports, ever recorded.

THE NATIONAL SHEET METAL ROOFING COMPANY, 339-345 Grand Street, Jersey City, N. J., have sent us an extremely artistic booklet entitled "Shingles That Last," which they have made very interesting and instructive. The catalogue contains many new designs in Shingles and Tiles and gives a very comprehensive idea of the superiority of the "Walter's" over any other production in this line of goods. They state: "The advantages of artistic and durable roofing are being daily more widely appreciated. To Walter's Shingles and Tiles more than to anything else is due this good opinion of metal roofing. They have now been on the market for twenty-three years, and we can and do claim that it is impossible to find a more durable, artistic or economical metal Shingle or Tile than those described in this book. All our Shingles and Tiles are put together by a patent lock, obviating all soldering and hammering, so that there is nothing to break loose, owing to the constant contraction and expansion of the metal which occurs with metal roofing when applied in the old way." The book deals with galvanized tin shingles, copper shingles, tin roofing, Walter's Patent Expansion Lock, Excelsior Tiles, Octagon Tiles, Clover Leaf Tiles, Ridge Coping, Snow Guards, Finials and Stop Blocks, and testimonials are given from parties who have used these goods for the past eighteen or twenty years, expressing perfect satisfaction. Send for catalogue.

OCTOBER 25, 1905

Editorial Trade Review

Unusually warm Summer weather is in evidence all over the country, but does not seem to affect trade unfavorably, which continues exceedingly active and in full volume. The September sales by comparison were as good as one could wish, but those for October bid fair to be of the most satisfactory kind.

Heavy purchasing in all lines seems to be the order of the day and are not retarded by the recent advances on heavy goods. In fact, manufacturers are very conservative about instigating advances, not making any changes unless compelled to by cost of material influencing the act, and even then they prefer to go on record with changes that are considered unimportant enough to cause no cessation in buying.

The principal trouble with the jobbers is their inability to keep up an average stock of goods for the retailers to draw supplies from, the delays in the filling of orders by manufacturers being partly responsible for them, and the fullness of orders received from the retailers helping to create a scarcity. Then when a chance exists to get some line in satisfactory shape, some transportation problem will present itself for solution, from cars being used for crop movements or a scarcity of them preventing delivering of anticipated shipments. The large orders that have gone forward for thousands of freight cars show how greatly the want is recognized by the railroads, who will have to wait, like their own patrons, to get the orders filled. Moving the heavy crops, especially this year more than another, with their scarcity of transportation facilities made evident, taxes the railroads severely.

Retail dealers are reporting a good trade, that seems never to have been better during the past two months; especially as affecting the busy trade centres of the country, where general activity prevails, making the views of the trade decidedly optimistic in tone. Notwithstanding which no undue speculation is apparent; strictly business and plenty of it, present and prospective, as every one is satisfied with the excellent prosperity and perfect conditions.

The demand from the Southern States which was affected by the yellow fever scare—that was felt more or less in several States—with the prospect of all quarantines being raised, are recovering their confidence in the future, and ordering their customary supplies which have been held for months in abeyance. The West and Northwest, favored with water communication, are ordering large quantities of goods to go forward before the usual close of navigation on the Lakes; this has especial reference to heavy goods, which are needed in the Upper Peninsular trade largely, and have arbitrary dates for shipment to which attention must be given.

Retailers' orders are of wide importance and well assorted, giving evidence of light working stock and a general demand for legitimate wants. Building improvements are noted largely in every city or town of importance throughout the country; causing builders' Hardware to be in steady and brisk demand as ever. The manufacturers are straining every nerve to fill the jobbers' requirements, and shipments are made with more regularity than formerly, whether complete or the reverse. In fact, trade is without a single discordant note, but everywhere is reported a hopeful and healthful outlook.

SEWING MACHINES AND THE HARDWARE TRADE.

We desire to call to the especial attention of our readers the series of articles under the above heading we are publishing, having reference to the sale of Sewing Machines by the Hardware trade. The subject will be treated exhaustively by the writer, who has been an expert in the handling of this important and profitable addition to the specialties of the business for a number of years. His practical experience will be given in detail and will be found complete with information, and his arguments of the convincing kind to see a larger profit to the square inch that could be expected from a line of goods so well known to the trade and its patrons as that of Sewing Machines. There are many dealers at the present time that study branches of their business like this, which is one of a class that may be amplified and extended accordingly, and not left entirely to department stores or catalogue houses. We ask for these papers their close perusal, believing it possible for every dealer to find in the advice given by the writer a profitable outcome.

SELF CONFIDENCE.

A noted general is said to have attributed his acquiring the habit of smoking to the fact that in a crisis in battle he was always under a constant fire of observation by his soldiers; and by schooling himself to slow, steady puffs at his cigar, he frequently inspired them with a confidence he did not himself feel through their fancy that his method of smoking denoted the absence of all excitement.

A good deal is preached to clerks upon the value of keen observation. In my opinion a good many clerks are too keen observers now for the good of their employers, and that is not the fault of the clerk, either.

A real business crisis seldom comes to any establishment without some hint of trouble reaching the entire working force; then the head of the concern will do well to note how he smokes his metaphorical cigar. If every telegram draws out an undue appearance of worry or concern, if there is a nervous haste in getting through the mail, in scanning the market reports, or, worst of all, the speculative reports, the belt of uneasiness that encircles the establishment is sure to be let out another hole and the working force that much further removed from their chief, but no less observant of his actions.

When everything is moving smoothly and practically running itself, the skilful manager is not so far above his less able competitor. It's when something interferes with the smooth running of the business belt, or threatens to throw it off entirely, that the difference between the two men comes out and not the least of the better man's assets is his superior self-confidence and self-control.

HARDWARE SPECIALTIES GIVEN AWAY

AS PREMIUMS IN OTHER LINES.

In our issue of the 10th inst., in their trade letter, one of our correspondents, Logan-Gregg Hardware Company, Pittsburgh, took occasion to make a few remarks having reference to a custom about which little has been said, that of using as Prizes or Premiums, Hardware specialties of some prominent well advertised character that would naturally be selected by the dealer, helped as he is by the manufacturers' advertising.

It has largely affected the retail sales of these very specialties, restricting the sales to the extent to which these goods are used as premiums, in order to facilitate the sale of goods foreign to a distribution of Hardware specialties.

It was remarked by our correspondent:

"There is another drain upon the business of merchants, which, while it has not attracted the same attention, diverts a very considerable amount of trade from the retailer, and consequently from the wholesale house. We refer to the custom of giving merchandise as prizes to purchasers of specialties, such as soaps, flavoring extracts, etc. Our attention has been called to this by several of our customers, who complain that large quantities of ordinary goods, such as washing machines, lawn mowers, guns and numerous other items, are sent to their customers as prizes for buying some specialty and which, of course, reduces their sales by just that amount. Unless you have given this matter some notice, you will be greatly surprised to find the extent to which it has gone. We commend this matter to our associations, who are dealing with the Catalogue House question, to see whether it is possible to cure this evil or reduce it to less formidable proportions."

These goods being given away under such auspices exerts a tendency to cheapen the specialty in the general market and the retailer is apt to drop it for good and all. Only the bright and shining lights of the advertising world are those selected, as these goods obtain celebrity in the trade and know that degree of pull that helps to introduce the other article. In this respect as far as the specialties are concerned these goods exercise a more evil effect on the trade than the adversely criticised catalogue houses, fostering an influence that marks the goods out of a dealer's order, and cuts both ways in consequence.

We recommend the subject to the forthcoming convention. The Joint Committee might not consider it unworthy of their attention, as everything having a tendency to restrict the trade of retailers, by sales of goods that are well advertised, should be held subject to consideration of so able an organized body of the trade; and as our correspondents have observed have a tendency to "cure the evil or reduce it to less formidable proportions."

From a prominent manufacturer of one of the articles mentioned in the paragraph quoted by our correspondent, and who does not desire his name quoted, we have received the following vigorous reply:

Editor HARDWARE:

"Jobbers are inclined to lay all the blame for every trouble that the retailer has at the manufacturers' door. They blame the manufacturer for catalogue house conditions, when they themselves build up the catalogue house; they blame the manufacturer for supplying premium goods, when 90 per cent. of this class of goods is supplied by the jobber. At the recent meeting of the Catalogue House Committee, they "regretted" that the private brand subject had been connected with the catalogue house subject, while the jobbers themselves for the past two years have been shouting to the retail trade, and through the press in general, that the retail merchant should handle private brands, and thus free himself from catalogue house competition. They directly through their salesmen, and through the press have been cementing the private brand proposition to the catalogue house proposition, yet when the manufacturer brings it to the attention of the public in the proper light, the jobber then "regrets" that these two subjects should be connected. It is mighty strange to us that the manufacturers do not come out and express themselves more forcibly on these subjects, but allow the jobber to bring about conditions that prove annoying to the retail merchant and then permit the jobber to lay the blame all to the manufacturer.

"On many of these points where the jobber is trying to 'stand from under' to those who are familiar with the conditions, they appear ridiculous, and we trust that you will in your editorial columns, in a modest way, bring these points to the attention of your readers. The Trade Papers are particularly interested in the welfare of the retail merchant, and the manufacturer, as they depend on the retail merchant for their subscriptions, and on the manufacturer for the substantial part, that is the advertising part of his paper; while the jobbers are not an important factor on your subscription list and are mighty poor advertisers."

The following letter having reference to "Premium" goods, is self-explanatory:

Mr. Editor—You will please note the following extracts from our declaration of what constitutes Savage Policy. All dealers selling Savage Rifles have always enjoyed our complete protection and co-operation.

By maintaining a reasonable and legitimate profit for every dealer.

By refusing to place Savage Rifles in the hands of people who are known to use standard products to the detriment of the trade, such as price-cutting catalogue houses, *"premium"* and *"scheme goods" distributors.*

By our referring all orders and inquiries from prospective purchasers to dealers handling Savage Rifles.

By judicious advertising in standard publications aggregating a combined circulation of approximately ten million.

SAVAGE ARMS COMPANY,
Utica, N. Y.
A. W. Connor, Sales Manager.

The White Lily Washer Co., Davenport, Iowa, as representative advertisers among the Washing Machine fraternity, send us the following:

Editor HARDWARE:

I am in receipt of your favor of recent date, asking for my views on the custom of giving merchandise away as prizes. This question and the Catalogue House question are synonymous, and it is a question that needs an enormous amount of study and publicity to get the average Hardware dealer to realize that the remedy lies entirely in his own hands. Of course, I do not pretend to say that any one dealer can remedy this evil; but if the Hardware Dealers' Associations throughout the country will take up this matter and act as a unit, I believe that these evils would soon be overcome.

You call my particular attention to the fact that Washing Machines, Lawn Mowers and Guns are used as prizes. They are, and they are also sold by the Catalogue House. Is there a remedy? I claim that there is, and I will endeavor to show how it can be done.

In the first place, no Washing Machine Factory, Lawn Mower or Gun Factory could run at a profit if they had the entire sales of these concerns; and, in order to make a profitable business, they must either sell the retailer or the jobber. Now, if Mr. Dealer would only get together with his fellow-dealers and say, "We don't buy any goods that are sold to prize-giving concerns or Catalogue Houses," Mr. Manufacturer would soon be saying, as we say, every day, "We don't sell our goods to Catalogue Houses or Merchandise prize concerns." The trouble is, we have too many manufacturers who have never learned to say no; and the only way they can be taught in their old age, is to have the dealer reiterate it to them until they realize that the dealer has wakened up and found out that he is the King Pin of the situation; that he is not buying any of their goods; and all because they are selling the Catalogue Houses.

The dealer may ask how he is going to get a line of goods that is not sold to the Catalogue House. He may say they can't all buy "White Lily" washers. This is true, but we are not the "only pebble on the beach." We don't sell the Catalogue House or Merchandise Prize Concern. There are others, and a good many of them, good reliable concerns, who sell their goods direct to the retail Hardware trade, or through a Hardware jobber, Manufacturers, like ourselves, who would not under any consideration, accept an order from any one not in the legitimate retail business. It has been our experience that the Catalogue House and the Merchandise Prize Concern do not want an unknown article. They don't want a line of goods that is not sold by the retailer. What they must have to be successful, is a line of goods that the dealer has advertised. So if Mr. Dealer will only positively refuse to buy any goods that are handled by these concerns, it will serve a double purpose.

In the first place, it will stop the advertising that is done by the retailer for the Catalogue House; and in the second place, as soon as this advertising is stopped, Mr. Catalogue Buyer stops

Digitized by Google

buying from Mr. Manufacturer and he has lost both the trade of the retailer and the Catalogue House. His failure to say "no," in the first place, has put him out of business. Another thing the retailer wants to look out for, is the manufacturer that puts out his goods under any and every old name. A short time ago I was talking to a retail dealer and in the course of our conversation the Catalogue House question came up, and he informed me that he never handled anything that was sold by a Catalogue House. At the same time he was making a leader of a washing machine that was identically the same as those handled by nearly every Catalogue House, only under another name. I informed him of this fact and had him compare the cuts of the machine, which were identically the same. He cut the line out; and if every other dealer was to watch the matter a little closer it would be time well spent.

My humble advice is, Mr. Dealer, get together. Attend your Hardware Dealers' Conventions. Buy your goods from manufacturers who don't sell the Catalogue House or Merchandise Prize Concerns, and then you will find that the manufacturer will soon come to your terms. As far as we are concerned, we will not under any circumstances sell our goods to be given away as prizes or to any Catalogue House.

Sam T. White,
Sec'y & Treas. White Lily Washer Co.

PREMIUM GOODS.

In the trade letter to Hardware of Oct. 10th, the Logan-Gregg Hardware Co., comment on the amount of goods distributed as premium goods, and the great loss it means in Hardware to the retail merchant. We quite agree with them, for if allowed to continue will grow to be quite as serious, to the retailer, as the catalogue house.

Many jobbers, both large and small, have for years cultivated this trade, selling in quantities to suit the premium proposition, and later on, if the premium company found the goods moved in quantities, they went to the manufacturers for supplies, and the quantity often being as great as the medium sized jobber would buy, get the jobbers' prices.

Many large distributors of premiums, such as the Continental Tobacco Co., originally drew their supplies in large lots from jobbers.

Having watched this very closely, for several years find that 90% of the "premium goods" in the Hardware line, are sold by jobbers, and think the stand well taken by the Logan-Gregg Hardware Co.

At Washington this should be one of the important topics for discussion by the jobbers, and adopt measures that will check this evil, and not cultivate this trade, as they did the catalogue house, until too large for the jobber to longer sell, and then expect the manufacturer to undo the evil they had been many years in building up.

C. F. M.

THE RECENT RURAL DELIVERY P. O. ORDER.

It is believed by those in the Post Office Department familiar with the subject that the regulation permitting mail to be delivered on rural routes by box number only, and authorizing postmasters to furnish applicants with the number of routes and boxes thereon radiating from their respective offices, will be withdrawn, leaving in force only that part of the original order providing that boxes on rural routes shall be serially numbered.

The Post Office Department has recently issued for the use of the daily press in the form of a typewritten memorandum, the following statement:

The suggestion to extend to rural mail boxes the provision of the postal laws and regulations which permits delivery of mail matter to city boxes by number only has recently furnished a live subject for correspondence in the Post Office Department. The original suggestion carried with a statement, which appeared to be justified by the records, that the proposed extension would greatly increase the receipts at rural free delivery post offices.

Inquiry on the subject at the office of the Fourth Assistant Postmaster-General to-day developed the fact that it had been found exceedingly difficult in many sections of the country to make prompt deliveries of letters on rural routes where there are a number of families of the same name. In order to overcome the difficulty and enable postmasters to furnish carriers and substitutes with proper and complete rosters of patrons on their routes the conclusion was reached after careful and thorough consideration that the best way to accomplish the end desired would be to number the boxes and have rosters prepared showing opposite the number of each box the names of all persons entitled to receive mail at that box. For instance, if there were a dozen Smiths receiving mail at box No. 1 on rural route No. 1 a list of the names would be placed opposite rural box No. 1, so that the carrier or his substitute could see at a glance where each person's mail should be deposited.

After it had been decided to number rural boxes, the suggestion was made that it might be feasible to extend to the holders of rural boxes the privileges given holders of city boxes, as embodied in paragraph 7, section 638, Postal Laws and Regulations, which is as follows: "Mail addressed merely to the number of a box may be delivered to the holder thereof so long as no improper or unlawful business is conducted in this manner."

In order, however, to test the feasibility of the proposed extension the Department made public the proposition with a view to bringing out any objections to it that might exist. The publication appeared in July last, and nothing having been heard against it, the order was accordingly issued. Very soon thereafter a number of protests were received, in view of which the execution of that part of the order extending the provisions of section 638, Postal Laws and Regulations, to holders of rural boxes, was deferred indefinitely, pending the result of an official investigation, which is now in progress. When this investigation is complete final action in the matter will be taken by the Department.

By the above is designed to inform the public as to the origin of this controversy and the position of the Department at the present time.

The Catalogue Houses seem to have given up the prompt effort which they made, inducing rural carriers or local postmasters to violate the regulations by furnishing names and addresses. This is believed to be caused by the action which was taken by the Department when notifying certain concerns that their proposition to postmasters and carriers involved violations of the law and that all employees transgressing the regulation would be promptly dismissed. The managers of these mail order houses placed under the ban are aware that the Department meant to keep its word and that disastrous consequences might follow. It is stated on the best authority that if any further abuses in this direction had been discovered the matter would have been turned over to the Department of Justice for appropriate action.

MR. BIGELOW'S GOLDEN ANNIVERSARY.

Samuel A. Bigelow, president of the National Hardware Association and president of the Bigelow and Dowse Company, Boston, Mass., commemorating the number of years with which he had been connected with the business, celebrated his fiftieth anniversary on Friday, October 13. During the day made so memorable he received testimonials from a number of his friends and well wishers in the trade that were not only locally prominent but extended all over the country. The Executive Committee of the National Hardware Association presented him with a superb mahogany chair handsomely upholstered in leather. The numerous employees of the company sent a splendid bouquet containing fifty American Beauty roses, which was supplemented by another bouquet which was decorated with a card, "Your Boston jobbing friends and neighbors hope to greet you on your hundredth anniversary."

Accompanying the gift of the National Hardware Association was a letter from T. James Fernley, Secretary-Treasurer, which read their good wishes as follows:

"In behalf of your fellow officers, members of the Advisory Board and the Executive Committee of the National Hardware Association I ask you to accept the office chair sent to you to-day as a souvenir of the anniversary which you celebrated on Friday Ootober 13.

"It is a very rare privilege to be enabled to complete a half century in commercial life. Indeed, of those who start in the race but few are permitted to pass the fiftieth milestone. You are to be congratulated on this anniversary occasion, not only because you have been able to continue in the race, but that this anniversary day finds you equipped mentally and physically for a continuance of the same.

"We do not ask that you accept this souvenir because of its intrinsic value, but simply as a slight token of respect from those with whom you have associated during more than one-fifth of your commercial life in an effort to uplift this, your chosen business. It is generally recognized that you have made many sacrifices for your business association, and it must to-day be a source of a great deal of satisfaction to know that selfishness has been an unknown trait in your character.

"The Hardware trade of the country is indeed proud of the record that you have made—50 years in one line of business in your city and no tarnish attached to your name. It is the earnest wish of your friends of the officiary of this association, whom I represent, that continued happiness shall attend your remaining days and that you may spend many restful hours occupying the trifling souvenir to which allusion is made."

Mr. Bigelow began his business life in 1855, beginning with a salary of $50, which in three years, the usual apprenticeship of the day, was increased to $125. He was so earnest and industrious in the several subordinate positions filled by him he finally succeeded to salesmanship. When the firm of Homer Bishop & Co. was founded in 1864 Mr. Bigelow was so important as to be offered a partnership in 1866. After several changes in the style of the firms the business was incorporated in 1894 under the name of the Bigelow & Dowse Company. He was one of the founders of the National Hardware Association, serving on its Executive Committee continuously until in 1903 he was elected its president and was re-elected in 1904.

SEWING MACHINES AND HARDWARE DEALERS, No. 3

The modern sewing machine distributed by the Hardware jobber to-day, is, we may say, a refined mixture only of the best principles that have been tried and tested in "old line" machines. The sewing machine handled by the jobber is the best that has been done by many minds. The best that has been invented, buried, forgotten, re-invented, tested and molded into forms of pleasing utility and now offered to the retail Hardware dealer at a popular price.

The sewing machine business is bound to develop in the same way as the demand for any other standard household necessity. Those dealers already handling sewing machines are increasing their trade on this line every year. This is a line that actually belongs to the Hardware trade and will continue to remain so as it becomes better understood, and when the Hardware dealer will handle only the better and more reliable grades, and so maintain the advantage first gained. To the beginner, sewing machines look very much alike, but with experience comes discrimination and the retail dealer soon learns that the best is a satisfactory trade builder and a winner and he buys the cheaper grades only for comparison and to increase the sale of the better grades. It is with the sewing machine as with any other line. The competent salesman always sells the best goods knowing that by so doing he increases his prestige, his profits and his future business, leaving to his less fortunate competitor the matter of price which, on account of his lack of experience or ability, or both, has and must always remain his principal talking point. It is, perhaps, true that the Hardware trade to-day are handling more cheap machines than they will in a few years when their experience and knowledge of the business is wider.

The day is past when sewing machines were classed a luxury. They have become a recognized household neccessity in every family, no home being complete without one. When a family goes housekeeping, along with the bed, table and chairs comes the sewing machine and it would be almost impossible these days to keep house without a sewing machine. The sewing must be done either by the housewife or the seamstress and in either case the sewing machine is a necessity. Their principle of construction is so simple and they are now made so perfect and with the application of the ball bearing stand they make no noise and with the improved attachments are so complete that they will do any and all kinds of sewing at home, from the plainest apron to the most elaborate piece of embroidery.

Not so many years ago, sewing machines were sold entirely through agents and canvassers, while to-day they are sold through merchants and the Hardware trade almost exclusively. The Hardware dealer can handle sewing machines to better advantage and with more profit than the agent, because as a rule, he is permanently established in business, is well and favorably known in his community and has the confidence of his acquaintances and customers, almost all of whom would prefer to buy a sewing machine from him than from a canvasser or a stranger believing that they will get a better article and at a more reasonable price, it also appearing proper that the Hardware dealer supplying most of their other wants should also furnish them with a high grade family sewing machine.

There is no extra expense in the way of fire, lights, rent or help so that any profit in selling sewing machines is just that much net and clear. Increased income reduces general expenses and there is nothing the Hardware dealer can add to his already established business that will net a better profit or give better satisfaction with as little trouble as a first class high grade family sewing machine. A small space set off in the front part of the store is practically all that is needed. Bearing in mind the fact that a good floor display is always a good investment as an advertisement especially with a staple article that could be considered a side line. A great many of the Hardware dealers take charge of the sewing machine department themselves. Others, again, place the line in charge of one of their employees allowing a small commission on each sale as an incentive to take an interest in the line and get it thoroughly started.

The traveler of the jobber is in position to give the one in charge of the sewing machine department all instructions necessary to run the machine and to sell it as well as assist in making a sale or instructing a customer whenever he is on the ground.

We are very often asked if everybody has not got a sewing machine. No indeed. About the same number are and have been made each year for the past thirty years. The trade of the jobber on sewing machines has shown a healthy increase for years past and the prospects for the continuation of increased trade is better now than for several years. Sewing machines like furniture, wear out. New improvements are being made and new families are constantly coming on so that the demand is always about equal to the supply from one year's end to the other.

The Hardware dealer who has not yet added sewing machines to his stock will find the business is just as certain and just as profitable as any other line and if he will give sewing machines a fair chance, there is no branch of his business that will pay a better profit for the investment than a line of high grade, fully warranted reliable family sewing machines.

There are a great number of cheap machines on the market and of course there is a class of trade who will not buy a first class article of any kind, but we know from experience that in every community there are people who desire the best, people who know that a trifle more cost in the beginning saves in the end, and to such, the superiority of the machines handled by the Hardware dealer can be easily demonstrated.

Then again, the majority of people want a good, family sewing machine. They fully realize that this is an article that lasts a life time and for that reason cannot afford to risk the unreliable machine although it may cost less in the beginning. To the retail Hardware dealer who is considering the sale of sewing machines and of adding this profitable line to his stock, we would especially impress on his mind that a knowledge of the general construction of sewing machines is not essential to the successful or profitable sale of them. Their simplicity of construction and the carefully worded and illustrated instruction book that goes with each machine enables anyone to use it without special or specific instructions.

In comparing sewing machines and the sewing machine business of the past with the sewing machines and the sewing machine business of to-day, I am of the firm opinion that the experimental stage has been passed and that within a very few years time, the greater part of the family sewing machines that are used will be distributed through the retail Hardware dealer and will be just as staple and decidedly more profitable than some other lines to which ten years ago the retail Hardware dealer was an entire stranger.

G. H. Dirhold.

St. Louis, Mo.

YALE & TOWNE MFG. CO.'S CATALOGUE, No. 18.

We have received from the Yale and Towne Manufacturing Co. their catalogue No. 18, which is a handsome volume of some two hundred pages, 6x9 inches, substantially bound in green board covers with red cloth back, lettered in gold, and "intended especially for dealers who handle only the active goods most commonly called for, and therefore omitting the vast number of special and irregular goods of infrequent sale which neccessarily constitute the greater part of an unabridged trade catalogue." The main portion of the book contains appropriate selections in extensive lines of Padlocks, Night Latches, Dead Locks, Builders' Hardware, Locks in sets, Keys in Blanks, Cabinet and Trunk Locks, Blount Door Checks, Chain Blocks, and other special products mentioned. In addition to which it contains historical matter in connection with the company and is made especially valuable to the dealer who receives it by the comprehensive information to be found under the following heads:

Glossary of Technical Terms. Comprising definitions of technical terms relating to Locks and Hardware, the use of which will tend to a better technical knowledge of such articles and to their correct specification in orders and correspondence.

A Lock Primer. An illustrated description of the elementary principles and component parts of Locks of all kinds.

Lock Picking. An explanation of the theory and practice of picking locks, and a guide for the determination of the relative security of Locks of various kinds and grades. A brief and popular explanation of this interesting subject.

Master-keyed Locks. A clear and comprehensive explanation of Master-keyed Locks, their construction, kinds, and uses, con-

Digitized by Google

taining technical information which every Hardware salesman has need of at times, but heretofore has found it difficult to obtain.

Hand and Bevel of Doors. An illustrated article giving clear and explicit rules on this complex subject, for the guidance of salesmen, and in form available for daily reference.

Care of Locks. Brief instructions for the care, cleaning and repair of Locks and other Hardware; of especial use to locksmiths, and to dealers who maintain a repair department.

The volume is intended for general distribution and will be sent on request to Hardware dealers, purchasing agents, architects, contractors, building superintendents and others who have to do with building. It is the intention of the Company that it shall reach the dealers and others without expense, and they state that they will send this attractive and useful book without charge, express prepaid, if the parties desiring the same mail a postal card to them requesting it.

THE WASHINGTON CONVENTIONS.

The annual conventions of the National Hardware Association and the American Hardware Manufacturers' Association will be held, as already announced, on November 8, 9 and 10 at Washington, D. C.

The Executive Committee of the National Hardware Association will meet on the 6th and 7th, the association holding its first session at the Arlington on the 8th, at 10 a. m. This will be an open session, at which the manufacturers and other visitors will be present. After the president's address and the report of the secretary-treasurer the subject for consideration will be Catalogue House Competition. How Shall It Be Met? An executive session of the association will be held in the afternoon.

In the evening a progressive euchre party will be held at the Arlington, the affair being in charge of a committee of ladies. Prizes will be awarded in practically the same manner as at the card party at Atlantic City last year. There will be no charge for participation in this event.

Manufacturers who desire as an advertisement to contribute some article of their own manufacture are invited to send it to Mrs. F. P. May, Arlington Hotel, Washington, in time to be received by the committee by Monday, November 6. It is desired that those who propose to send prizes shall communicate with Mrs. May at once, stating what prizes will be sent. The ladies, however, want it distinctly understood that they do not solicit these prizes as a contribution, so that manufacturers need not feel that there is any obligation to send anything unless they heartily desire to do so.

On Thursday morning the association will hold an executive session. At 12.30 President Roosevelt will receive all the delegates and visitors at the White House. This reception will be by card only, which may be obtained from F. D. Mitchell, secretary of the American Hardware Manufacturers' Association, 309 Broadway, New York, or T. James Fernley, secretary of the National Hardware Association, 505 Commerce Street, Philadelphia.

On Friday executive sessions will be held morning and afternoon, and in the evening the annual banquet will be given under the auspices of the National Hardware Association.

Delegates and visitors will be furnished with a badge bearing their name and the name of the house with which they are connected. To accomplish this it will be necessary for the members and visitors to communicate at once with the secretary of the American Hardware Manufacturers' Association or the secretary of the National Hardware Association.

W. K. MORISON & CO. OF MINNEAPOLIS BURNED OUT.

Fire resulting in a loss of about $50,000 to the stock of W. K. Morison & Co. Hardware store at 247-249 Nicollet Avenue, Minneapolis on Sunday afternoon.

The blaze started in the basement at the rear and before discovered had gained considerable headway. The cause is unknown, but it is presumed that the fire started either as the result of spontaneous combustion or from electric wiring. From the basement the flames leaped up the freight elevator shaft at the rear and when the firemen arrived they saw fire leaping up to the third and fourth stories, while from every window and door they encountered thick clouds of smoke.

After a fight of about three hours the flames were subdued but not until the building and contents were soaked from top to bottom. The flames had been confined almost entirely to the fourth floor. The front portions of the first, second and third floors were not touched by fire. Water did the damage on these floors. The water loss will be just about as heavy, if not heavier, than the fire loss.

The fourth or top floor is used for the storage of stoves, refrigerators, agricultural implements and tools. The third floor is used for the storage of paints, oils and general Hardware stock. The second and first floors are the retail floors.

The Morison stock was valued at $150,000 with $120,000 insurance.

LEGAL CORRESPONDENCE

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Law Editor "HARDWARE," No. 309 Broadway, New York City.

NEGLIGENCE—EMPLOYERS' LIABILITY ACTS.

Question: Has a man who is employed by a contractor and is hurt by the explosion of a blast through the carelessness of the foreman in charge of the work, any right to recover from his employer for the injury?

Reply: At common law and in the absence of statutes, it is generally held that if the master exercises reasonable care in the selection of competent fellow-servants, an injured man has no remedy against his employer, even for injuries caused by the negligence and carelessness of such co-servants. This was deemed to be one of the risks incident to his employment. And it was generally held that a foreman and laborer were co-servants within the scope of this rule. It follows that in a State where the common law has not been changed by statute, a master would not be liable in such a case as you put.

But by recent statutes, commonly known as Employers' Liability Acts, the master is made responsible for negligent acts of *superintendence* of a superintendent or a person exercising such functions. These statutes usually require that timely notice shall be given the employer of the time, place and cause of the injury, if any advantage is to be taken of their provisions. We think that the negligence of the foreman in permitting a blast to be prematurely exploded, is an act of superintendence; and that, in a State like New York or Massachusetts, where Employers' Liability Acts are in force, the person injured has a clear right of action against his employer for an injury like the one stated.

WHO ARE CITIZENS OF THE UNITED STATES.

Question: Is a man born within the United States of Scotch parents who have never been naturalized, a citizen of the United States or a citizen of Great Britain?

Reply: This question was at one time much controverted. In this country it is settled by the decision of the United States Supreme Court in the case of *Wong Kim Ark* (169 U. S. 669), where it was held that a child born within the United States of Chinese parents, who resided here, but were subjects of the Emperor of China, is by reason of his birth an American citizen. It follows from this decision that all persons born within the territorial limits of the United States of resident parents, are citizens thereof, irrespective of their parents' nationality.

SALESMEN—RIGHT TO DISCHARGE.

Question: "A" hires "B" as a salesman and agrees to pay $2,500 a year for his services. No written contract was entered into. At the end of six months the employer discharges the salesman for no fault on the salesman's part, but because the employer cannot afford to pay so high a salary. Has he the right to do this?

Reply: In this class of cases, two rules are well settled: (1) If there is a hiring or contract of employment *for the definite term of one year*, then the employer will be liable for discharging the employee, unless the discharge is occasioned by the employee's incompetency or misconduct. (2) A general or indefinite hiring is *prima facie* a hiring at will; and if the employee claims that he was hired for a definite term of one year, the burden is upon him to establish this by proof. A contract to pay one $2,500 a year for services is not a contract for a year, but a contract to pay *at the rate* of $2,500 a year, and can be terminated at will by either party. No presumption attaches that it was for a day even, but only at the rate fixed, for whatever time the party may serve. On the facts as you state them, the employer had the right to discharge the employee at any time and without assigning any cause therefor.

A COMPLIMENT WELL DESERVED.

We note that F. E. Myers & Bro., of Ashland, Ohio, at the Lewis & Clarke Exposition, Portland, received the highest award, a Gold Medal, for their display of Myers pumps, etc. They made an elaborate and telling exhibit of their goods, and the judgment of the Awarding Committee corresponded with those of substantially every large exhibition since the introduction of their Pump and Hay Tool product, to the effect that the superiority of Myers goods justifies the highest awards, a compliment that is justly appreciated.

OUR NEW ORLEANS LETTER

(Special Correspondence.)

New Orleans, Oct. 18.

Practically throughout Louisiana, and to a considerable extent in Alabama, quarantines against travel have been removed, while restrictions on freight and express, where they have been imposed at all, are things of the past. The greatest relaxation took place three days since, October 15, and by October 26, the date of President Roosevelt's visit, it is anticipated that the entire burden of restriction imposed through fear of yellow fever will have passed into history.

Practical results from this are shown in the decided increase in the volume of all business. This increase has shown itself especially in the Hardware trade, which has suffered less from fever than perhaps any other, and has regained more quickly than any other what would have been its normal position without the interference of quarantines, etc.

According to the average estimates of representatives of the leading wholesale merchants of New Orleans, the Hardware, mill supply and general lighter manufactured iron and steel business is now running from 7 to 15 per cent. ahead of the movement during the corresponding period in 1904.

This statement, to those unfamiliar with conditions here, is, of course, hard to believe. However, the actual statistics of the railroads, of the custom house, etc., bear them out literally.

The lines leading are: Roofing, bar iron, nails, heavy Hardware and building Hardware, and workmen's and builders' supplies of all sorts and kinds. The local market is, of course, excellent under the stimulus of returning population and renewed building activity. Export trade, never affected at all by the existence of the fever, is increasing far more rapidly in proportion than is any other department of the trade. Domestic business to Louisiana, Mississippi, Alabama and East Texas, affected by fever, is now resuming rapidly boom conditions.

HOW STATES HAVE ACTED.

In the order named the trade suffered most; Texas, Mississippi, Alabama, Louisiana. In reverse order conditions are improving rapidly. Texas is the most obdurate, and has refused to make any further concessions. The Texas Railroad Commission together with the Texas health authorities, have managed between them to practically exclude from the East Texas territory all New Orleans and Shreveport merchants.

Mississippi has been quarantine-crazy since fever was first declared. Alabama has relaxed considerably, and Louisiana restrictions are practically gone.

Of course the greatest hindrance was on traveling men, and on merchants anxious to come to market to discuss stocks and quotations.

The reason for the sudden development of trade is that now restrictions are relaxed, merchants whose stocks had been heavily oversold, are now stocking up, buying goods in a lump that would otherwise have been purchased at intervals for the past six weeks. The purchases are now going out heavily over the Louisiana roads. The Illinois Central, the Y. & M. V. R. R., the Louisville & Nashville road, are beginning to increase their business rapidly.

Traveling men are now nearly all back from vacations and resting spells, and nearly all have gotten into their territories, either through New Orleans, or by the "back door" from the North or East.

HOW THE LINES ARE RUNNING.

As told above, building Hardware, builders' supplies, etc., of all kinds are leading. Just now, in its relative position of course, mill supplies are going heavily to the cotton and sugar districts, where repair work is now in full blast with the long delayed gangs of workmen out from the cities. The lumbering district, which has its own workmen always on hand, has been a constant purchaser since six weeks ago.

Implements, running now to vehicles, heavy breaking in plows, and harvesting tools and machinery of various sorts, are going chiefly to the sugar district, where there is a big crop with a prospect of a fair price. The sugar planters are buying more liberally than are any other planters. They are also purchasing building materials, etc., in quantities.

There has been a revival of trade with the rice belt, where better prices are being realized than was looked for some weeks or months ago. It is probable that the depression for two years gone, will be to a great extent overcome this winter under the active campaign for larger markets for the cereal.

In the local trade, household and furnishing and fitting goods have recently taken a sudden jump. This is due largely to the sudden return of many thousands of the class of the population that buys most of the best grade of goods. The retail stores of the better sort are feeling the impetus of this business to a marked extent.

EXPORT BUSINESS.

Export business, going chiefly to Mexico, Cuba, and to Panama and the nearby republics, while hampered to some extent by the quarantine restrictions placed on those ports suspected of being infected with yellow fever, has never been seriously interfered with. Trade to Cuba went either via Mobile, or direct to Havana on the Morgan liners. Now the Munson people, who removed to Mobile when fever was found here, are soon to return to New Orleans. Additional facilities are soon to be added to both the Munson and Morgan line trade. The Mexican American Steamship Company recently added ten new ships to its fleet, and cut down the time to Vera Cruz and to Tanpico, by one full day each way. When the first of the two new ships arrived, a luncheon was tendered on board to the export men of the city. On board the export men of both Stauffer-Eshlemen, and A. Baldwin & Co., commented on the fact that the Mexican business had increased fully 200 per cent. within three years, and expressed a conviction that even greater increase would soon follow.

"Our merchants are just now learning how to go after the Spanish-American trade," said one, "and now that they have learned that lesson, I fully believe that the business will be sought as earnestly and as systematically as it is by the German and English merchants, who control the greater share of the Spanish-American markets."

In addition to these added export facilities, there is a new coastwise steamship company to put in ships to Alabama and Florida ports. This will bring into touch with New Orleans a territory hitherto regarded as belonging exclusively to the cities in Alabama, and to those of Georgia.

PERSONAL NOTES.

Personal notes of the last six weeks are brief. Just now those who have been away are rapidly returning.

Pearl Wight, head of Woodward-Wight & Co., who has been severely ill in New Hampshire, will return about November 1. He was largely instrumental in getting the first movement started to invite President Roosevelt to come to New Orleans. He is Republican National Committeeman from this State.

Albert Baldwin, Jr., of A. Baldwin Co., Ltd., is a member of the Executive Committee on the President's entertainment.

Postmaster T. J. Woodward, formerly senior member and founder of Woodward-Wight Co., is also a member of this committee.

The Fairbanks Company has broken ground for its big building in Camp and St. Joseph Street. The structure will be completed in eight months, and will be the largest Hardware and machinery warehouse in this section.

THE INVENTIVE FACULTY.

It's human nature to be inventing or tinkering with something, from a story to the tariff; and the Hardware clerk who hasn't some pet improvement up his sleeve shows that his mind is on some other subject than his work.

Perhaps nine-tenths of the inventions placed upon the market have no practical value other than as novelties; but of the other tenth, some of them are money-makers and most of the simple ones from which the greatest returns are apt to come originate in unexpected places.

One thing is pretty certain, that when a man sets out to improve a machine he is pretty apt to understand the machine he wishes to improve. Nothing else, except the professional pride, that does not always come to a clerk at the beginning of his career, will set his attention so closely in the direction of any special line, as will the idea that he can think out some improvement to his material advantage.

The Hardware dealer who allows it to be understood among his employees that he is on the alert for valuable mechanical suggestions from them, to help develop any that are worthy, will not often have to make the last part of the proposition good, but he will create for himself an attentive, observing and intelligent lot of clerks, and always has before him the possibility of a first chance at that unexpected little device that will make a fortune for himself and his ingenious employee.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED OCTOBER 2, 1905.

390,205. Latch and Lock. J. Cocks, Larimore, Dak.
390,356. Wheelbarrow. F. E. Fay, Bryan, Ohio.
390,392. Window Shade Attachment. C. Niss, Jr., Milwaukee, Wis.
390,402. Pipe Wrench. J. Rose, Franklin, Mass.
390,422. Wrench. O. C. White, Wichita, Kan.
390,433. Compound Tool. J. Benson, Tascosa, Tex.
390,527. Master Key Lock. W. E. Sparks, New Haven, Conn
390,574. Plane. M. Doscher, New York, N. Y.
390,591. Sheet Metal Vessel. F. Haberman, New York, N. Y.

PATENTS ISSUED OCTOBER 3, 1905.

800,886. Broom Attachment. C. M. Thompson, Leland, Ill.
800,737. Can Opener. J. J. Graf, Crescent Springs, Ky.
800,682. Corkscrew. P. L. Robertson, Canfield, Canada.
801,005. Curtain Pole. P. Hamill, Darragh, Pa.
801,185. Combined Curtain Rod and Supporting Bracket. G. C. Degner, Chicago, Ill.
800,883. Damper Cord, Weather Strip, and Door Cushion. D. Schuyler, Los Angeles, Cal.
800,958. Door Controlling Apparatus. J. W. Tripp, New York, N. Y.
800,125. Door Lock. S. Wisnewski, Warsaw, N. D.
800,872. Hoe. J. O. Newcomb, French Camp, Cal.
800,776. Latch. J. F. Waethers and E. L. Hill, Columbus, Ga.
801,041. Sash Fastener. G. A. Orr, Cripple Creek, Colo.
801,075. Sash Fastener. J. E. Gibbs, Cincinnati, Ohio.
800,852. Saw Jointer. M. Kapp, Bellingham, Wash.
800,933. Saw Sharpening and Gumming Machine. J. Moore, Jr., Sharon, Ga.
801,084. Saw Sharpening Machine. B. L. Humphrey, Maysville, N. C.
801,057. Saw Swage. C. J. Anderson, Eureka, Cal.
800,807. Composition of Matter for Soldering. H. P. Larsen, Portland, Ore.
801,193. Soldering Iron. W. C. Howard and J. McQuiston, Newcastle, Pa.
800,646. Combination Tool. D. M. Haney, Sykesville, Pa.
800,972. Finishing Tool. F. A. Black, Chicago, Ill.
801,116. Washboiler. E. A. Stevenson, Boulder, Colo.
800,814. Wrench. R. H. Martens, Rockford, Wash.
800,988. Wrench. A. B. Cook, Windber, Pa.
801,009. Wrench. G. W. Heyl, Westview, Pa.
801,151. Wrench. J. W. McKeever, Fleming, W. Va.

PATENTS EXPIRED OCTOBER 9, 1905.

390,656. Window Screen. M. H. Dehner, Cincinnati, Ohio.
390,666. Sash Lift. H. A. Grotholtman, Fort Wayne, Ind.
390,670. Heating and Ventilating Stove. M. Hayden, New Milford, Pa.
390,679. Hand Doe. P. Jacobus, Varick, N. Y.
390,684. Stove or Furnace. F. A. Magee, Chelsea, Mass.
390,686. Combined Ironing Board and Iron Stand. W. H. H. Marcum, Ash Grove, Mo.
390,687. Step Ladder and Table. J. B. Marsden, Baltimore, Md.
390,704. Door Lock. W. W. Pursel, Berwick, Pa.
390,718. Saw Setting Device. C. C. Taintor, Elizabeth, N. J.
390,749. Auger. H. Burdick, Maple Rapids, Mich.
390,754. Ironing Table. F. A. Clark, Newark, N. J.
390,756. Ironing Table F. Corbett, New York, N. Y.
390,781. Dust Pan. R. G. Hebden and W. Thorpe, El Paso, Ill.
390,854. Boiler Attachment for Stoves. A. Greenaway, Louisville, Ky.
390,887. Door Check. S. H. Miles, Rossville, Kan.
390,915. Lock. W. E. Sparks, New Haven, Conn.

PATENTS ISSUED OCTOBER 10, 1905.

801,642. Combination Tool. T. H. Bradley, Watertown, N. Y.
801,767. Stud Wrench. F. L. Cleveland, Marquette, Mich.
801,650. Curtain Hanger. A. J. Culture, Chicago, Ill.
801,369. Door Fastener. J. W. Dickson and S. J. Ely, Castlerock, Wash.
801,232. Ball Bearing Hinge. B. F. Foss, Fairfield, Me.
801,587. Suit Case or Satchel Fastener, Catch or Lock J. Hammesfahr, Vailsburg, N. J.
801,590. Wrench. J. Hooper, Hazzard, Pa.
801,591. Grain Sieve. E. O. Hough, Fosston, Minn.
801,381. Garden Plow. W. E. Jones, Ellisville, Miss.
801,721. Door and Window Screen. G. Klay, Buffton, Ohio.
801,256. Tool Holder. T. J. Moore, Altoona, Pa.
801,740. Washing Machine. J. H. Myers, Lafayette, Ind.
801,808. Shutter Fastener. E. Niggili, San Antonio, Tex.
801,680. Holder for Sickle Bars. O. Norton, Hartington, Neb.
801,747. Churn. A. A. Seat, Eldorado, Ill.
801,815. Band Saw. C. Seymour, Defiance, Ohio.
801,694. Door Spring. J. L. Sheppard, Charleston, S. C.
801,405. Folding Stool. E. Shupe, Racine, Wis.
801,559. Combined Nut and Pipe Wrench. W. O. Tarr, Orleans, Ind.
801,449. Dish Drainer. M. A. Yonkers, Denver, Colo.

PATENTS EXPIRED OCTOBER 16, 1905.

391,053. Door Hanger W. Kopisch, Blue Hill, Neb.
391,066. Permutation Lock. T. P. Owen, York, Neb.
391,069. Lawn Mower. G. J. Parham, Bedford, Ind.
391,096. Spring Hinge. D. C. Stover, Freeport, Ill.
391,104. Sash Holder. H. A. Williamson, Philadelphia, Pa.
391,106. Window Screen Fixture. E. H. Ambler, Beatrice, Neb.
391,193. Lawn Mower. T. Rogers, Springfield, Ohio.
391,211. Combination Tool. R. T. Torkelson, Worcester, Mass.
391,240. Tubular Lantern. E. C. Glazier, Rochester, N. Y.
391,322. Meat Cutter. R. V. Jones, Mount Union, Ohio.
391,373. Lantern. G. A. Kennedy, Coatcook, Quebec, Canada.

PATENTS ISSUED OCTOBER 17, 1905.

801,919. Wrench. H. B. Schiller, Philadelphia, Pa.
801,949. Mop Wringer. J. White, Oxford, Ohio.
801,954. Ratchet Wrench. A. Wood, Philadelphia, Pa.
801,958. Window Screen. C. W. Allen, Port Byron, Ill.
801,978. Hoe Attachment. S. J. Gardener, Temple, Tex.
802,018. Wrench. W. P. O'Brien, Detroit, Mich.
802,054. Washing Machine. C. E. Miller, Akron, Ohio.
802,062. Lock. F. J. Vieweg, Plainfield, N. J.
802,090. Metal Window Screen. H. W. Watson and W. W. Watson, Jamestown, N. Y.
802,095. Coffee Strainer. A. R. Darragh, Pittsburgh, Pa.
802,116. Sash Frame and Sash. J. G. Roseboom, Cincinnati, Ohio.
802,185. Window Screen. F. Folden, Beatrice, Neb.
802,187. Pipe Wrench. G. M. Gealy, Enon Valley, Pa.
802,214. Combined Scrub Brush, Mop and Wringer. E. Hilker, Chicago, Ill.
802,240. Lock. C. Salviolo, New York, N. Y.
802,313. Floor Hinge W. M. Potter, Syracuse, N. Y.
802,360. Wrench. J. R. Patty, St. Paul, Minn.

USE AN EXTRA SHEET OF PAPER.

Among the "dont's" that should be observed by the retail dealer, one of the important ones is: Don't send a remittance and an order in the same letter, unless there is no hurry for the goods ordered. They may be sent in the same enclosure, but the notice of remittance and the order should always be on separate sheets. When the manager of a large wholesale house or factory opens his mail, he sorts it out and sends it to the different departments to be attended to. All letters containing checks are sent to the cashier that proper credit be made on the books; orders are sent to the order department; letters regarding collections to the collection department; inquiries to the sales department, etc. Within a few moments after the mail is opened it has been distributed to the various departments for attention. If a dealer sends in a remittance to apply on his account and follows his notice of remittance with a hurry-up order for certain goods, that letter goes in the bunch that is sent to the cashier and *not* to the order department. The result is that probably by the time the cashier has entered up the credit and discovered that the letter also contains an order and it is sent to the order department, it is too late to make the shipment that day. If the dealer was in a hurry for the goods ordered he is very likely to censure the house from which he ordered the goods for not being prompt, and to accuse the manager of not attending to business properly. It does not occur to the man who has combined his remittance and order that he is the one who has not properly attended to business, but such is the fact. A sheet of letter paper does not cost much and the use of an extra sheet will often save vexatious delays in receiving goods. When the order is for repairs for a machine that the dealer's customer must permit to remain idle and thereby keep men idle at a time when every minute counts, the delay is expensive, and sometimes the farmer refuses to believe that the dealer has not been at fault and the latter loses a customer. Use an extra sheet of paper and avoid delays.—*Implement Trade Journal.*

RECENT TRADE PUBLICATIONS.

Chicago Flexible Shaft Company, Chicago, Ill., have sent us a little booklet called "Solid Comfort—The Secret of It," in which are contained illustrations and descriptions of the "Duchess" and several "Clark" Carriage Heaters. They state: "Warm feet mean much to those who ride when the mercury is low. They will appreciate the virtues of Clark Heaters. They occupy but little space and are comparatively inexpensive to maintain. If you would ride in Winter and enjoy solid comfort we offer you the means in a Clark Heater. The secret of all this solid comfort lies revealed in Clark Prepared Coal. It is made so scientifically, and of such high-grade, selected material, that each cake radiates a continuous and strong volume of heat for upwards of sixteen hours." A price list is also given showing a variety of styles and prices to choose from. Pamphlet will be gladly sent on request.

Barney & Berry, Springfield, Mass., have presented us with their 1905-6 Catalogue, in which are described, priced and illustrated all grades, styles and sizes of ice skates manufactured by them. They call attention to the fact that these skates are known and used "in every land where water freezes," and can be obtained at almost any Hardware or Sporting Goods store. For further information regarding these well-known goods write for one of their interesting booklets.

The Armstrong Manufacturing Co., Bridgeport, Conn., has made us the recipients of one of their new catalogues, giving at length descriptions of the goods they manufacture, namely, Stocks and Dies. They state: "We feel that it is almost unnecessary to say anything in favor of The Genuine Armstrong Stocks and Dies, of which we are sole manufacturers, as they are so well known and generally liked that they are found in the kit of every first-class steam and gas fitter in the civilized world. We would, however, call special attention to our new machines for threading and cutting off pipe." They claim that these machines are built with the same care and under the same able mechanical supervision as their stocks and dies and other small tools. The catalogue is extensively illustrated and will be found very interesting to those dealing in this class of goods. Send for one.

The Handy Things Company, Ludington, Mich., manufacturers of Hardware Specialties, have sent us two of their latest catalogues, both of which are very attractively gotten up. One of these pamphlets deals with the Plain, Polished and Enameled Handles, Knobs, Pail Woods and Variety Wood-Turning in all styles of finish, and they agree to furnish their patrons with first-class work, make prompt shipments, and quote the lowest prices. The other pamphlet, which is the 1905 catalogue, describes and illustrates a few of the company's specialties in Hardware and Woodenware and Sportsmen's Goods, all of which will prove of value to those dealing in these lines. Accompanying these two pamphlets is a small one containing numerous testimonials from people who have used and found of great value the Wide Runner Skates made by them. These skates are designed for use on snow-covered streets and sidewalks, and also tend to eliminate the danger attendant upon ice skating. They are made of high quality steel, extra strong to resist hard usage and handsomely finished. Send for this interesting little booklet together with the pamphlets above mentioned, all of which will be sent free of charge.

The J. W. Fiske Iron Works, 39 and 41 Park Place, New York, N. Y., have recently sent us a copy of their illustrated catalogue and price list of their New and Improved Iron Stable Fixtures. This catalogue measures 12x9 inches, contains 182 pages and 756 illustrations. They have made this book very comprehensive and exceedingly interesting, showing many new features in the line of stable requisites, and it will repay a careful perusal. Particular attention is called to Fiske's Sanitary Stall Drain. They claim that this Drain cannot be excelled for practicality and durability, it being so constructed that the plate can be laid on an almost level floor, obviating the necessity of pitching the stall floor several inches, which is customary, and to which horsemen are so much opposed. They can be arranged according to architects' plans, suiting any arrangement of stalls. The catalogue contains an unusually complete line of Stable Fixtures, and as it is carefully indexed, the contents are easy of access. A separate illustrated catalogue of Copper Weather Vanes will also be furnished upon application.

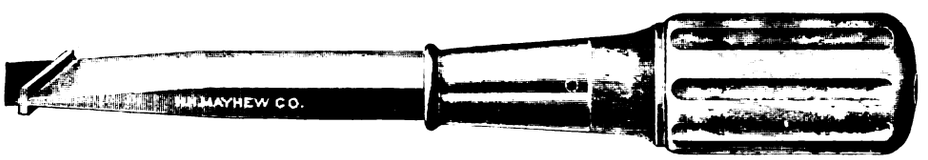
G. M. Thurnauer & Bro., 35 and 37 Park Place, New York, have recently published an exceedingly attractive and artistic catalogue of Housefurnishing Goods and Specialties. They have made their catalogue very comprehensive, and have attempted to give a general idea of what their lines comprise. The book is in large pamphlet form and measures 12 inches in width and 9 inches in length. It contains 92 plates, each plate showing numerous cuts of household necessities in the Hardware line, including an extensive line of culinary utensils, kitchen and table goods, not to be found in any other catalogue in the trade. Send for this most interesting catalogue for further information regarding their products.

William Johnson, Hedenberg Works, Newark, N. J., has issued a Price Sheet of Brick, Plastering and other Trowels, which he claims are made of the best quality of cast steel. He states: "They are in every respect tools made to stand the rough usage to which Trowels are put, and I guarantee them." For particulars regarding these goods write for Catalogue No. 25.

The Union Hardware Company, Torrington, Conn., New York office with Tower & Lyon Co., No. 95 Chambers Street, have placed in the hands of the trade a neat little booklet in which is shown a very complete line of roller skates. In addition to all their old patterns, which have proved themselves popular and serviceable, they call attention to their "All Clamp Extension Skates," which represent and embody the newest and most up-to-date features in invention and design as applied to roller skates. If you are interested in this line write for 1905 catalogue.

Hunt, Helm, Ferris & Co., Harvard, Ill., take pleasure in presenting to the trade their latest Steel Sled Catalogue. They aim to place before the reader as accurately as possible, both by illustration and description, their line of sleds—a line which they believe to be superior to anything else on the market in this class of goods. They claim that their sleds are unequalled for strength of construction and durability, and that they possess a runner so designed as to make them the speediest sleds ever constructed. The catalogue is in pamphlet form, ten inches long and four inches wide, and is illustrated throughout in colors. It has a very characteristic cover, showing a number of children sliding down hill. The catalogue will prove very interesting to those dealing in this line. Send for Catalogue No. 27.

The Scranton Whetstone and Abrasive Wheel Co., Scranton, Pa., have sent us a copy of their latest publication, which is divided into two sections. The first half of the book is devoted to Catalogue and Price List O, which fully describes and illustrates all kinds, qualities and shapes of Oil Stones which they manufacture. They claim that their quarries at Hot Springs, Arkansas, are unexcelled in the quality of Washita and Arkansas stone they produce. The second half of the book, which is the first edition of Catalogue W, is descriptive and illustrative of Corundum and Emery Wheels, in regard to which they state that only the best quality of Crystal Corundum and pure Turkish Emery are used. They pride themselves on the fact that no imperfect wheels leave the factory, as they are thoroughly tested and tried by experts before packing. A price list of regular wheels is given in this catalogue, the last column of which shows the rates of speed for the different sizes of wheels. If you are not in possession of one of these most interesting catalogues one will be gladly sent on application.



The McCabe Hahger Mfg. Co., 425-427 West Twenty-fifth Street, New York, N. Y., have just issued their 1906 catalogue of their Ball-Bearing and Tubular Door Hangers, Expansion Bolts and Ball-Bearing Wheels of all descriptions. The catalogue is in large pamphlet form, is well printed and carefully arranged, and contains a great many illustrations, which contribute to the attractive appearance of the book. The McCabe Company consider the door hangers to be the simplest, cheapest and best made, and as a recommendation of their superiority make mention of the fact that they have been used in many of the palatial residences in America and Europe. Several letters are given testifying to the merits of the McCabe hanger, indicating the high esteem in which the goods are held by well-known architects and builders in different parts of the country. The catalogue will be found very comprehensive and instructive and cannot fail to greatly interest all those dealing in this line. When writing ask for the First Edition of the Catalogue for 1906.

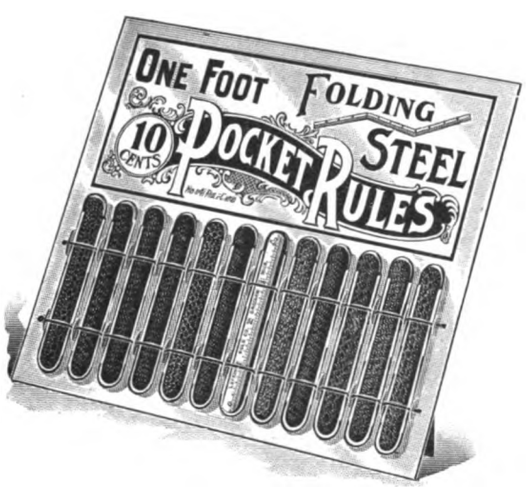
NEW GOODS AND SPECIALTIES.

MACHINISTS' "OFFSET" SCREW DRIVER.

The H. H. Mayhew Company, Shelburne Falls, Mass., are placing upon the market their latest device in the shape of an "Offset" Screw Driver. It is a novel design made from a special crucible steel, possessing great toughness, of one-half inch square. The blade is milled so as to leave diagonally across the blade a short projection of same thickness as point, making two "offset" screw driver blades, which have a nine-inch leverage. Inaccessible screws, by means of these offsets, may be "rach-



MACHINISTS' "OFFSET" SCREW DRIVER.

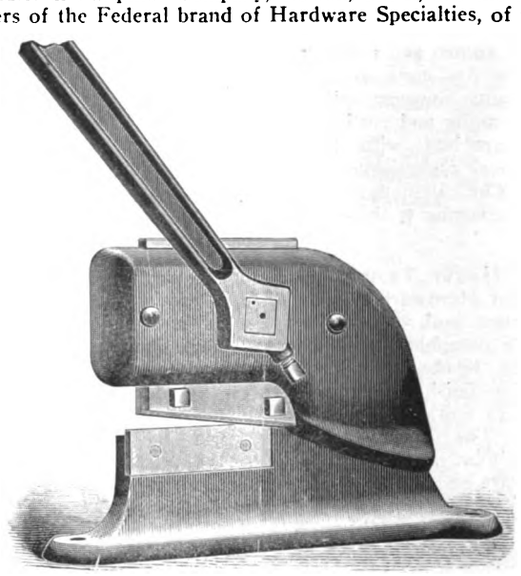
eted" tight. When using the blade in the ordinary manner a wrench may be used to set the screw home. The blade is square entirely through the handle, a heavy wire securely locking handle, ferrule and blade together. Altogether it is a fine, heavy screw driver adapted for heavy work and thoroughly warranted. Its dimensions are: Length, 9½ inches; stock, ½ inch square; point, ½x1-16 inches; offsets, 11-16x1-16 inches. Packed ½ dozen in box.

FOLDING STEEL POCKET RULE.

The Lufkin Rule Company, Saginaw, Mich., and 280 Broadway, New York, is marketing a novelty in a one-foot flexible Folding Steel Pocket Rule, of which we present an illustration, showing the interesting manner in which the trade can handle it and enjoy the pleasure of having it meet with a rapid sale, as with ease it appeals to the bargain hunter among mechanics.

FOLDING STEEL POCKET RULE.

They are supplied on a display card 9½x11½ inches, having nickeled easel support to show them up well. The rule is ⅜ inch wide, has two brass riveted joints, each of the three four-inch sections being etched on one side in inches to sixteenths, and enclosed in a metallic edge leather case in assorted colors. To insure the receipt of card in perfect condition each one is completely enclosed in a stout folded cardboard container and tied. Having been formerly sold at 25 cents each they ought to enjoy a large sale at the fetching price of a ten-cent novelty.



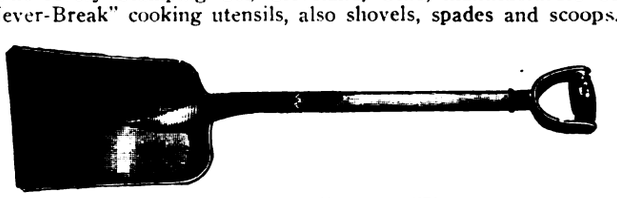
ICE CREAM CUTTER.

Divides the Large Block Into Small Bricks.

It is often desirable to cut up large bricks or blocks of ice cream into smaller cakes of equal thickness. Generally this is accomplished with a knife, of course, each cake being cut separately. There has been an ice cream cutter designed by a New Yorker, which will cut up a block of ice cream into many small cakes at one operation. The body of this device is of cylindrical form and open at both ends, the body having preferably two walls to render it strong. A handle is attached in the centre, a vertical opening being formed directly opposite to the handle and extending from end to end of the body. The knives consist of blades of any desired length, the edges being beveled or otherwise sharpened, each blade having a round head, these heads being of such diameter that they will fit snugly within the body, the blades extending out of the body through the opening. A thumb-screw connected with the head of each blade serves to keep the blades in position. It will be observed that all of the parts, with the exception of the handle, can be separated one from the other, so that each and every part of the device is readily accessible for cleaning.

THE FEDERAL BENCH SHEAR.

Chandler & Farquhar Company, Boston, Mass., are the manufacturers of the Federal brand of Hardware Specialties, of which



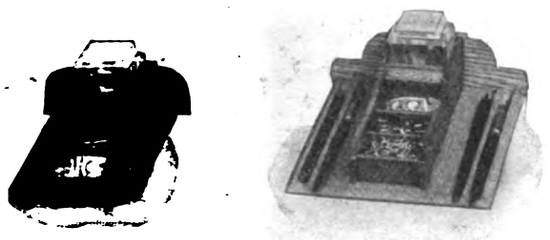
THE FEDERAL BENCH SHEAR.

the Shear herewith shown is one of the line. It is a strong and compact and well made Shear. It will cut bars or sheets not exceeding 3-32 inch thick or even thicker of soft stock. This Shear is particularly adapted for shop or store use where light stock is used. It retails at $15, with a liberal discount to the Hardware trade.

TROPIC ASH OR FURNACE SHOVEL.

The Avery Stamping Co., Cleveland, Ohio, manufacturers of "Never-Break" cooking utensils, also shovels, spades and scoops.

TROPIC ASH OR FURNACE SHOVEL.



are offering the trade a most useful, practical and durable article for Winter housekeeping, viz., the "Tropic" ash or furnace shovel, which is made with plain, long wood handle, or fitted with a malleable D top at a slight advance in price. The blade of the

Digitized by Google

"Tropic" shovel is made of a high-grade of sheet steel. The metal at the top end of the shank is flush with the blade. The edges of the metal at the rear of the shank are butted closely together. The handle is second growth, northern white ash, with long fibre, smoothly sanded to prevent slivering. It is strong, sound and tough. The manner in which the handle is joined to the shovel enables the furnace owner to get far back beneath the ash pit to remove the ashes without turning the shovel over and scraping the ashes forward. This is accomplished by making the handle parallel with the blade of the shovel, which also removes the necessity of lifting the handle high up in the air when feeding the furnace. "Tropic" ash and furnace shovels are made in sizes No. 1 and 2, the former having blade 9x13½ inches, and the latter 11½x13½ inches.

THE WARREN DESK CABINETS.

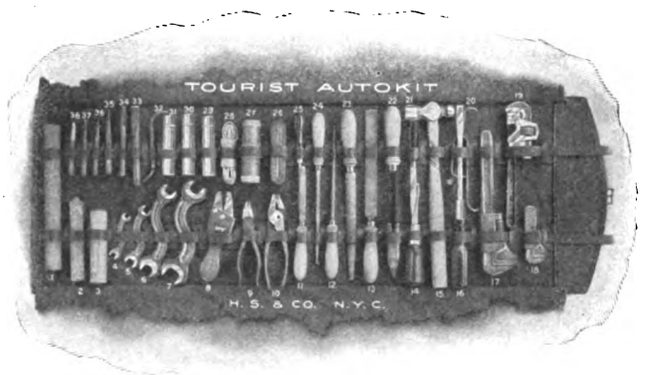
The J. D. Warren Mfg. Co., of Chicago, manufacturers of the Warren Sectional Shelving, have added an entirely new idea for the convenience of the Office, that can be adapted to any desk, in

DESK OUTFITS WITH SINGLE INKSTAND.

the form of a very unique design to hold all desk essentials. It is provided with small compartments with sliding glass covers, carrying out the Warren idea of "everything in sight" and of quick access, which promises to be a most popular requirement.

DESK OUTFIT WITH PAPER HOLDER.

A glance at the various illustrations will show the condensed form in which the many articles used on a desk may be assembled, with a definite place for the Ink Wells, Sponge Cup, Pens, Pencils, Postage Stamps, Letter Scale, Calendar, Clock, Ruler,



PAPER HOLDING OUTFIT WITH TWO INKSTANDS.

Erasers, Rubber Bands, Paper Clasps, Writing Paper, Envelopes, Blotters, Business Cards, Pins, Matches, Cigars, etc. The pockets, or small compartments being covered with a small glass cover screens them from all dust, and keeps each article in a definite place, within instant reach. They are described more fully in a booklet which will be mailed in response to inquiries for same.

AUTOMOBILE OR TOURIST OUTFIT.

Hammacher, Schlemmer & Co., Fourth Avenue and Thirteenth Street, New York, are offering to those interested a very handy Tourist Auto-Kit, consisting of 38 articles, selected according to their universal adaptability to frequent usage, by either the tourist or automobilist. The tools are contained in a leather-edged, heavy canvas roll, and are of excellent quality for the

AUTOMOBILE OR TOUREST OUTFIT.

purpose for which they are designed, which has been made after the necessity for some set of this kind being indispensable, especially to the owner of an automobile.

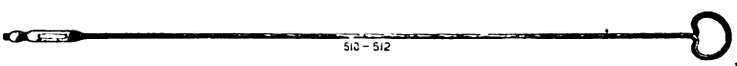
MONITOR COFFEE MILL.

The Bronson-Walton Co., Cleveland, Ohio, are placing upon the market through the Hardware trade the Monitor Coffee Mill, illustrated herewith. It is made by having the bottom and body drawn out from a single piece of sheet steel so that it cannot be pulled apart. The grinders have feeding prongs to quickly gather in the coffee, while the grinders may be easily taken apart

MONITOR COFFEE MILL.

for the purpose of cleaning the mill, as the mill may be used for both coffee and spices. The bolt which turns the grinders is made of wrought steel, while a seamless steel receptacle in the body of the mill fits closely over the grinding parts and is intended to catch the ground coffee or other material. The mill can be adjusted to grind fine or coarse, and is finished in a bright black japan.

FEED BAG FOR ANIMALS.



Supported by Rods Which Slip Over the Shafts.

The driver of every team should be supplied with a bag of some kind for holding feed for his horses, as he seldom is sure where he will be when feeding time comes. Some drivers are very careful in this respect, while others make use of anything that is available. Quite a large number of feed bags are in use, the majority being constructed so that they can be attached to the side of the horse's head. This does not give the horse any freedom to move his head without moving the bag also. A Philadelphia man has patented an exceedingly simple feed bag which overcomes this fault. The bottom and sides are made of canvas or other flexible material, while the top consists of a circular frame divided into two sections, which are connected by small loops. Supporting the bag are two metal rods, one on each side, having hooks at the end which fit into the loops in the frame. In the centre and at the other end of the rods are circular loops which are shaped to fit over the shaft of the vehicle. It can easily be seen how easily this can be done, the bag always remaining in position where the horse could conveniently reach the feed, at the same time being able to move his head freely.

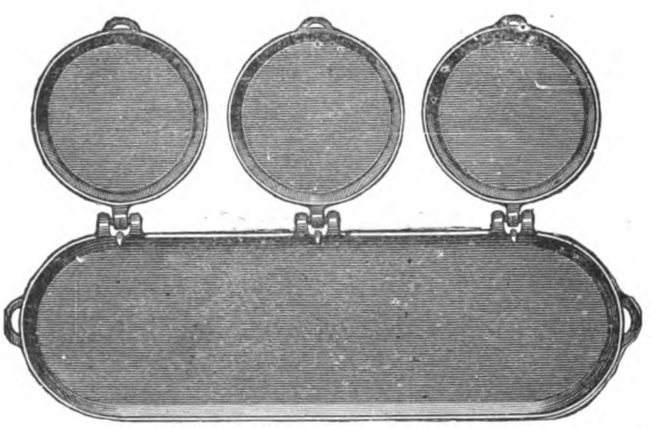
NEW STEVENS CLEANING ROD.

J. Stevens Arms & Tool Co., Chicopee Falls, Mass., are marketing the New Stevens Cleaning Rod for Rifles shown in the illustration. This rod is intended for .22-caliber rifles and consists of one-eighth inch coppered rod, with one end flattened and slotted, the other end with a jagged tip. The total length of rod is 28 inches, and is equipped with the Stevens special patented ring.

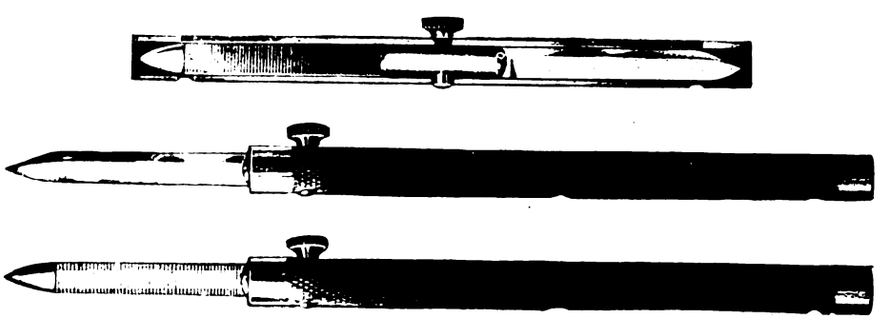


NEW STEVENS CLEANING ROD.

This patent ring differs from the ordinary cleaner and is much more practical and efficient than the latter. Heretofore, one-piece ringed rods have been made with an oval or pear-shaped ring, which, when in use, invariably dents the muzzle of the rifle, causing nicks or burrs, thereby rendering the rifle inaccurate, as a burr at the muzzle of the rifle deflects the bullet. In the Stevens Special Ring, however, the shoulders are so formed as to strike the outside edge of the end of the barrel, and thus the barrel cannot be injured, making this rod superior to all other ringed rods. The No. 512 rod for .32-caliber and larger is similar to the No. 510, excepting made of five-thirty-seconds inch rod and length 30 inches from ring to tip.

SCHOFIELD'S PATENT CAKE GRIDDLE.

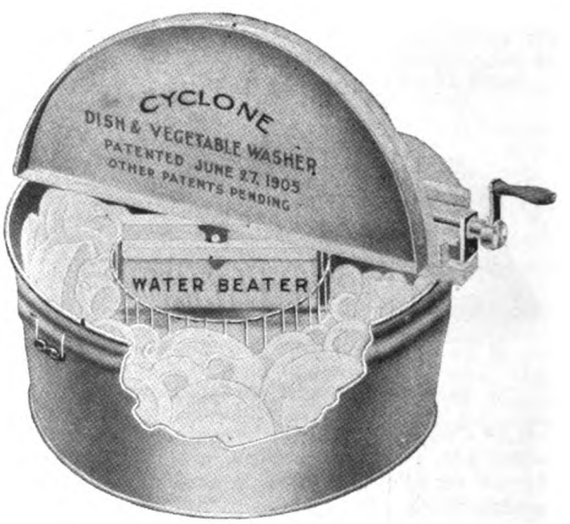
F. M. Van Etten & Son, Palace Arcade, Buffalo, N. Y., are the manufacturers of the Schofield's Patent Cake Griddle, of which we give an illustration. It is made of high-grade gray iron and weighs about four pounds. It sets right on top of the stove, as it fits any size; it is claimed to heat up or cool off in five minutes' time and bake six cakes at once. The steam gen-



SCHOFIELD'S PATENT CAKE GRIDDLE.

erated in the cakes may be held until ready to burn, resulting in making the lightest and most palatable griddle cakes. The round pans, being hinged separately, each cake is turned into the long pan as soon as it is sufficiently done and the round pan returned for another cake. It is claimed that it will make better cakes than the old-fashioned griddle, because the little pans are deep, hold the batter, and prevent its spreading out and drying up by getting thin, every cake being baked with smooth edges and exactly the same in size.

A USEFUL POCKET COMPANION.



A very handy little tool in the shape of a combination Pen Knife, File and Nail-cleaner is being placed on the market by the Billings & Spencer Company, of Hartford, Conn. The knife and file, which are fastened end to end, slide back and forth within the hollow handle, made of steel tubing. The blades are shifted to either end by means of the sliding bolt in the centre, which passes through a slot running the length of the handle, and locks the blade at its respective end. It is a novel and handy device. The blades are of fine steel, the handle is nurled, and the whole is nicely finished and nickel plated. The illustration shows the exact size of the tool, and it can be carried in the vest pocket, making a very compact and useful companion.

COMBINATION KNIFE, FILE AND NAIL CLEANER.

THE CYCLONE DISH AND VEGETABLE WASHER.

Z. S. & C. L. Randleman, Des Moines, Iowa, as the original patentees, are placing upon the market the Cyclone Dish and Vegetable Washer, of which we present an illustration herewith. It is made of galvanized metal, and the water beater shown in the illustration is attached to the gearing. One revolution of

THE CYCLONE DISH AND VEGETABLE WASHER.

the crank turns the water beater several times quite rapidly, thus throwing the hot water among the dishes with the greatest force, washing and polishing, it is claimed, a machine full in the fraction of a minute. The machine has a basin which holds sufficient water. In this basin the water beater revolves very fast, throwing the hot water in every direction. As soon as the machine is stopped the water settles immediately in the basin, leaving the dishes ready to be used again or placed away. It is claimed to make no difference if the dishes are covered with difficult matter in an ordinary way; the machine in its operation thoroughly cleanses them. The dishes being fully protected by the wire rack which encloses the water beater, run no risk of breaking those that are most delicate, as the dishes are not turned in the water, but the water is forced through them. It is claimed to be of especial use for washing vegetables, doing the work better and in less time, thus making it an excellent machine for market gardeners. The use of a dish cloth or the placing of the hands in the hot water are entirely obviated by the use of this washer.

A DOG'S LIFE.

"You have a child, I believe!" asked the manager of the stylish boarding house.

"Yes; 3 years old," replied the mother, gazing through her lorgnette.

"She will have to eat at another table with the nurse."

"But my dog, may I bring him to the table with me?"

"Oh, yes, there's no sort of objection to the dog."—*Yonkers Statesman.*

OUR BRITISH LETTER.

(By our Special Correspondent.)

London, October 14th, 1905.

IRONMONGERS AND ELECTRICAL WORK.

Until quite recently ironmongers have regarded electrical work as quite outside the scope of their operations. Electrical undertakings have been considered "too heavy" and matters which required great technical study and scientific education, consequently beyond the scope of the ordinary Hardwareman and his employee. With the march of progress which has been going on very rapidly during recent years in commercial circles British ironmongers are fast realizing that a considerable amount of electrical work may, with profit to themselves, pass through their hands. The electrical department of an ironmonger's shop formerly consisted of electric bell-hanging, which operation was performed on purely mechanical lines and without any scientific investigation into causes and results, and with comparatively little knowledge of the relative values of the different batteries employed, and without regard to the cell power needed in order to supply given lengths of insulated wire. Now all this is changed, and the ironmonger's workman is taught, at any rate, the elementary laws which govern electrical power, and he knows something about the construction of electric bells and indicators, as well as the reasons why perfect joints and well insulated wires are necessary. The Electrical Exhibition, which is now being held at Olympia, London, has been brought about through the instrumentality of the National Electrical Manufacturers' Association and the Institution of Electrical Engineers. The majority of the exhibits are composed of plant and heavy machinery required for light and power, but many of the stands contain most interesting collections of electrical appliances which appeal, not only to the users of power, but of electric light, both branches of electrical work now being brought into special prominence. The general public are fast learning the advantages of electric lighting, its convenience, superior illuminating qualities, and its comparative cheapness. The numerous inventions whereby domestic economy can be effected by the use of electrical machinery, household machines and cooking effected by the aid of the modern science. Numerous inventions, coming under the different heads mentioned, are on view at the Exhibition, which is being well patronized by the public as well as by retail Hardwaremen. There is no doubt that the Exhibition will give an impetus to the industry, and it is noted with satisfaction that the ironmongers of this country are wishful to secure a fair share of the trade. This they can easily do, and without much difficulty or inconvenience they may obtain the necessary assistance from their workpeople. Electric-wiring is not difficult, and when this is performed the attachment of fittings quite easy. In fact, the ironmonger now finds that the use of electric lighting leads to the purchase of numerous accessories for which he is able to obtain orders if he is in a position to carry out contracts for electrical installations. Many of the leading corporations and electrical supply companies offer special advantages to domestic users of electric power and are doing their utmost to popularize this method of obtaining labor-saving contrivances. The Electrical Exhibition, which is to remain open some little time longer, is by far the largest electrical exhibiton ever held in this country, and, as it is very representative, it is educative to both consumer and retail trader.

THE SALE OF DAIRY-FARMING APPLIANCES.

British ironmongers residing in country districts are largely dependent upon the success of the agricultural industries in their several localities, and are, therefore, anxious to introduce to their clients the latest and best labor-saving appliances and modern economical farm implements and machines. Dairy farming is an important part of this industry in rural England, and probably in no other branch of farming has greater progress been made in recent years than in this section; formerly the methods practised in the farmers' dairies were of the crudest kind, and an inventory of farm requirements of, say, fifty years ago would be scarcely understood by modern agriculturists, who are taught to regard mechanical contrivances as indispensable. Vast improvements have been made in churning apparatus and the old plunger churn, long ago superseded by the dasher of the barrel, is now placed among antiquarian relics. End-over-end, eccentric, and other forms of modern churns effect the operation of churning with great speed and produce the desired aim for the dairymaid with marvelous rapidity. Probably the greatest advance made in dairy farming is the rapid distribution of cream separators all over the country. In many ways Denmark leads the way in dairy farming appliances, and since the introduction in this country of the first cream separator, less than twenty years ago, a score or more of English and Continental manufacturers have poured a continual stream of these valuable appliances upon the English market. The latest and best types of separators, pasteurizers, refrigerators, coolers and other modern contrivances are now being shown at the Agricultural Hall, Islington, at the annual Exhibition of the Dairy Farmers' Association. During the past few days scores of bright and intelligent dairymaids keenly competed for prizes and awards in the churning and butter-making competitions. At this Exhibition not only farmers, but agricultural implement agents and ironmongers in the provinces, came up to the metropolis in great numbers, eager to inspect the latest inventions of English, American and Continental manufacturers. In connection with this Dairy Show poultry farming is allotted a gallery, where the manufacturers of these useful appliances demonstrate their several qualities and point out to their admiring visitors the advantages of their inventions. There are many different makes of incubators upon the market and it is difficult to select out of so many any particular make for special mention. It will, doubtless, be interesting to your readers to know that the United States of America figures largely among the locations where such contrivances are manufactured. The Cyphers Incubator Co., of Chicago and New York, have very successfully introduced their incubators in this country and have several energetic agents on this side. Most of the incubators and poultry appliances handled in this country by R. A. Colt, Ltd., are also of American origin.

THE FATE OF PARK ROYAL.

In a recent letter I referred to the unsatisfactory position of the Royal Agricultural Society of England, and to the probability of the abandonment of the permanent show ground in London. After giving the matter earnest consideration the council of the Royal Society have decided to hold a show in the provinces in 1906, and are now debating the fate of the show ground. They have already decided to cut down expenses and to materially reduce the salaries of the permanent staff. They have also in contemplation the sale of the London ground and the valuable site upon which their London offices are situated. By such drastic measures of reform and financial curtailment the well-wishers of the society hope to secure a sound financial basis upon which the future work of the society may be built. Although no decision has yet been arrived at, Derby is named as a possible location for the 1906 show. This town is centrally situated, convenient of access and possesses suitable land in the immediate vicinity of the town, and it is thought that if suitable arrangements can be made a show there will receive not only the support of agriculturists, but of manufacturers of implements and machines, and that an exceptionally good show may be anticipated.

WHAT BRITISH IRONMONGERS ARE DOING.

The Autumn and Winter work of Hardware associations has commenced, and already some advance in association work has been made. The London Association is taking steps to carry on a progressive campaign of mission work, and hopes, by setting a good example to provincial associations, to extend the benefits which associated members have received to those ironmongers who have not, so far, been convinced of the pecuniary and social benefits of association membership and affiliation to the I. F. A.

A distinctly forward movement is now going on among the ironmongers' assistants in this country and that progressive city, Liverpool, is leading the van. The officers of the Liverpool Assistants' Association are busily engaged in obtaining the opinions of ironmongers' assistants in other towns and country villages, so that steps may be taken to form local and district associations with the ultimate end of founding a National Ironmongers' Assistants' Association. The benefits of assistants associating has already been proved, and the members of the Liverpool Association speak very hopefully of the still greater benefits they hope to obtain in the future, in consequence of the improved facilities for obtaining technical information and trade knowledge which the association will afford.

THE NEW LORD MAYOR OF LONDON.

The Lord Mayor-elect for the city of London for the civic year, which commences in November, is Alderman Vaughan Morgan, one of the proprietors of *The Ironmonger*, the oldest Hardware journal in this country. Alderman Vaughan Morgan

JAP-A-LAC

REGISTERED TRADE MARK

"WEARS LIKE IRON"

WHERE IS YOUR JAP-A-LAC?

When a woman wants to buy a can of JAP-A-LAC she goes where she thinks she can get it. If your stock of JAP-A-LAC is near your front door and in clean condition. a great many women will buy it, even if they are not in your store for that purpose.

JAP-A-LAC is being advertised every day in the year; you can sell it every day in the year. It will pay you to keep your JAP-A-LAC in a very prominent place so that the customers whom we interest in it may buy of *you*.

The dealer who gives attention to JAP-A-LAC is enthusiastic. It isn't up-hill work to sell it, for we attend to that. Our extensive advertising, appearing in 35 of the leading magazines, continuously, *makes JAP-A-LAC buyers.*

The dealer who keeps JAP-A-LAC right gets the benefit of our advertising. Our advertising is done for the dealers and means *real profits.*

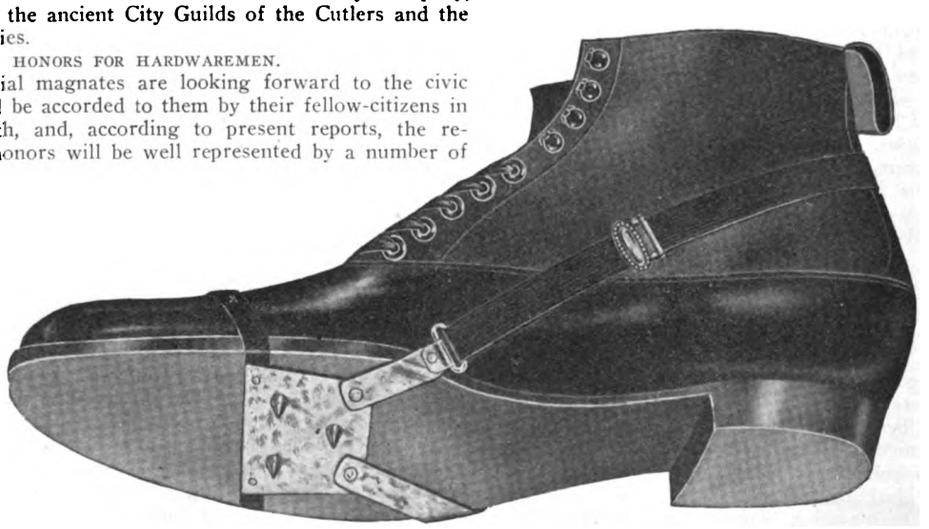
Don't let your stock disappear from the front of the store; use your windows—use the first sections of your shelves for JAP-A-LAC, then you will really know what it means to sell so good and so well an advertised commodity.

THE GLIDDEN VARNISH COMPANY,

MAKERS OF HIGH-GRADE VARNISHES FOR ALL PURPOSES

641 WILLIAMSON BUILDING,

CLEVELAND, OHIO



commenced his business career as a bank clerk in the year 1846 and some ten years later joined his brothers in founding the mercantile firm of Morgan Brothers; he afterwards took part in organizing the Morgan Crucible Co., whose products are well known all the world over. The Lord Mayor-elect was a Blue-coat School boy, having been educated at Christ's Hospital, London, becoming a governor of that institution in 1873, and treasurer in 1891. He is a director of the Hudson's Bay Company, and a member of the ancient City Guilds of the Cutlers and the Loriners Companies.

HONORS FOR HARDWAREMEN.

Many commercial magnates are looking forward to the civic honors which will be accorded to them by their fellow-citizens in the coming month, and, according to present reports, the recipients of such honors will be well represented by a number of Hardware manufacturers and merchants. The Master Cutler of Sheffield was installed with all the ancient honors and ceremonies at Cutlers' Hall on October 3d. Sydney Jessop Robinson, upon whom the honor falls this year, has long been responsible for the management of the Brightside Works of William Jessop & Sons, Ltd. He is a member of the Sheffield Chamber of Commerce, a member of the Iron and Steel Institute, and a vice-president of the Jessop Steel Co., of Washington, U. S. A.

THE PERFECT ICE CREEPER.

The Blair Husking Glove Co., Bucyrus, Ohio, are placing before the Hardware trade the Perfect Ice Creeper, which we illustrate herewith. It is made of cold rolled steel, galvanized, and the spikes used in the device are of hardened steel. It is fastened to the shoe with an automatic adjusting web and is easily and quickly put on or taken off when necessary.

THE PERFECT ICE CRUPER.

SO NATURAL.

"I dreamed last night, George," said Mrs. Swellman, "that I was with a box party at the opera and"——

"Yes," interrupted her husband, "I might have known that."

"What! How do you mean?"

"You were talking very loud in your sleep."—*Philadelphia Press.*

REVIEW OF THE MARKETS.

WIRE NAILS: The mills are extremely busy, in fact the production of Wire Nails is of record dimensions. The Southern States that have been holding back on account of the yellow fever are now sending in their orders in considerable volume, making the aggregate tonnage surpass that of August or September. The market is in such good condition that official prices are invariably maintained, and another slight advance in price would not create surprise. Quotations are as follows: f.o.b. Pittsburgh, plus actual freight to point of delivery, 60 days, or 2 per cent. discount for cash in 10 days:

Carloads to jobbers	$1.80
Carload lots to retailers	1.85

New York. The demand for small lots from store keeps the jobbers quite active, and the orders taken before the last advance are being delivered on dates specified. It is found difficult to keep stock assortments regular, as deliveries from the manufacturers feel the effect of a lack of transportation facilities. Quotations are as follows for small lots from store: $2.00 to $2.05, base.

CUT NAILS: Some irregularities in prices are reported for large orders in the Western markets, while the market conditions for material are referred to as justifying advancing of prices at an early date, which makes business good in anticipation. Quotations are as follows: $1.65, base, for carload lots, f.o.b. Pittsburgh. Iron Cut Nails for delivery at Pittsburgh, Buffalo and all points west of these cities are held at $1.75, base, in carload lots.

New York. While fair demand makes the local trade active enough, it is mostly of average quantities. There is a demand for small lots from store, of which quotations are on the basis of $1.90.

BARB WIRE: The business being done on Barb Wire, which is even this late in the season large in volume, astonishes the mills, but the prosperity of the farmer lies at the bottom of it. Quotations are as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$1.95	$2.25
Retailers, carload lots	2.00	2.30
Retailers, less than carload lots	2.10	2.40

SMOOTH FENCE WIRE: The mills are receiving new business every day. This and the filling of specifications on contracts has a tendency to make them very busy, which is augmented by the feeling that shortage of cars may delay the filling of orders. Quotations are as follows, f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads	$1.65
Retailers, carloads	1.70

The foregoing prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances.

BLACKSMITHS' VISES: The manufacturers of Solid Box Vises have recently announced higher prices covering advances of from 10 to 15 per cent. In a general way the small and medium-sized Vises may be quoted at a discount of 60 per cent.

WIRE COAT AND HAT HOOKS: The strength of the Iron market has caused a slight advance in the price of Wire Coat and Hat Hooks, which now may be quoted to the general trade at about 75 and 10 per cent.

ROPE: The following prices may be said to represent the market:

	Cents per pound.
Pure Manila, 7-16 and larger	12
Pure Sisal, 7-16 and larger	10
No. 2 Sisal, 7-16 and larger	8

LINSEED OIL: The following quotations are announced on "City" Raw Oil by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....46 cents per gallon.
In lots of 5 barrels or more.....45 cents per gallon.

The "American" brand for respective quantities, 2 cents per gallon less.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than raw.
Calcutta Oil.....60 cents per gallon.

THE CLEVELAND TRADE.

There is no red flag visible in the business sky but some apprehension exists that Congress may interfere with the business of the country by unwise legislation. It may seem necessary but it is not to be regretted if railroad rates are to be made a political issue. Politicians may welcome such action as it will furnish platform material on account of the general prejudice against corporations for public service. It seems to be apparent that the action of railroads in making rates conditioned upon "what the traffic will bear" has promoted general prosperity. That it favored the West has been a cause of complaint, but the benefit was so apparent to the people that business soon adjusted itself. That selfishness induced their action is not conclusive against it, as most of the public benefactors have come from acts preformed not for public good but to promote personal ends. If corporations for public service could be made liable for attorneys' fees where judgments are rendered against them for damages, it would result in earlier adjustments and do much to avoid the most serious causes of complaint. The rights given them under incorporation might bear this inequality for the public good. The benefit railroads have been to the country should protect them from undue prejudice and give them their rights. The men who appear as railroad magnates are not the only owners of railroads. Savings banks and insurance companies representing millions of people are deeply interested in their securities and the prosperity of the country is largely dependent on their prosperity.

The Lockwood-Taylor Hardware Co.,
C. B. Lockwood, Pres.

THE PHILADELPHIA TRADE.

It is pleasant to report that trade is fully up to expectations and orders are coming from every part of the country with most gratifying results. Not only is there an active demand for goods but they are wanted at once and shipments are being hurried, showing a need of goods. Under such circumstances, jobbers are having some difficulty in keeping their stocks in shape. It is a great annoyance to the dealer to order goods and then be denied immediate shipment, but this has been the experience of the jobbers, and apparently the manufacturers are far behind. For ourselves we could name orders placed three and four months ago that are still unfilled, although badly needed. Prices are strong and the material market is firm with higher prices announced from day to day and manufactured goods are feeling the strain of advance. These changes in prices, however, are moderate and probably do not more than cover the actual cost of the advance in cost; in fact, manufacturers claim that they are not fully repaid for the increased cost of making goods and that further advances will be imperative if the high prices of material should be continued.

The Copper market is particularly strong and nearly all goods in this line are advancing daily, such as, Copper Cocks, Rivets and Burrs and Brass Cocks. On the whole the sotuation is promising and as crops are now coming into the market there should also be a decided improvement in collections with resulting good trade throughout the balance of the Fall.

Biddle Hardware Co.

THE PITTSBURGH TRADE.

Pittsburgh seems to be upon the eve of another boom in her manufacturing interests. All the steel mills are full of orders and early deliveries are getting to be almost impossible. We hear of large purchases by the railroads of locomotives, cars and rails, while structural steel is ordered for delivery six months ahead. The recent advance in price of crude petroleum means a good deal to this section. A large part of Western Pennsylvania, Eastern Ohio and West Virginia depend in a measure upon the production of oil and a difference of 25c. a barrel in the selling price means the difference between a loss and a profit. A convention of parties interested in improved navigation in the Ohio and Mississippi Rivers is to be held shortly at Cairo, Ill. Much good has been done by these meetings in arousing public sentiment and influencing Congress to make appropriations for this purpose. No better use can be made of Uncle Sam's income than to use a goodly percentage thereof in improving these important means of carrying the products of the country from point to point. Pittsburgh is vitally interested in cheap transportation and will be represented ably at this convention. There is quite

an advancing tendency in prices of Hardware lately, especially in goods in which weight is the predominating element of cost. Retailers run no risk in stocking up whenever they can obtain goods at old rates or even at the first advance. All indications point to a busy Winter in Pittsburgh and it is difficult to find any reason why there should not be good trade for at least a year to come. We are enjoying very pleasant Fall weather and have had no killing frosts up to this writing.

Logan-Gregg Hardware Co.

THE DAVENPORT TRADE.

There has been a decided improvement in the volume of business during the last thirty days, and the footings show an attractive increase over the same period of 1904. This is the 18th day of October and we have had no frost worth mentioning. Farmers are husking and cribbing corn, which has been rarely done until after a killing frost. Lawns, meadows and pastures are green, and it seems more like September than October. The market seems firm. Prices are well maintained and collections satisfactory. We are looking forward to the Washington meeting, anticipating a great deal of pleasure in meeting old friends, renewing old and forming new acquaintances.

Sickels, Preston & Nutting Co.

DENVER DEALERS PROSPEROUS.

Arapahoe Street in Denver could well be termed Hardware Row, for here within three blocks are located six of Denvers' largest Hardware stores. The latest addition to the Street, is the store of Frank A. Ellis & Son, who early in the year moved their business up from Lorimer Street. The store occupies three numbers, 1645 to 1651 Arapahoe Street and is one of the finest in the city. The special feature of F. A. Ellis & Sons' new store is its light and bright appearance. Large windows are used to display goods in an exceedingly attractive manner. A very complete stock of sporting goods is carried. One front side of the store is used to stock and display this line, and the goods add much to the attractiveness of the store. Through the centre of the store are large double plate glass cases, in which are displayed cutlery, tools and fancy Hardware. The business of Frank A. Ellis & Son is largely wholesale, and the new store is especially arranged for shipping and carrying on of the wholesale trade. Frank A. Ellis Jr. in speaking of business conditions, said: "During the past eighteen months there has been a good demand for all building materials and at the present time the building trade is in a healthy, active condition."

At the big store of the George Tritch Hardware Co. everyone seemed to be working to their utmost in getting out and shipping fall orders. The entire state of Colorado as well as part of two other states, are thoroughly covered by this concern whose wholesale business is constantly enlarging. The George Tritch Hardware Co's. main store is located at 1648-50-52-54 Arapahoe Street.

The big store at numbers 1516 to 1522 Arapahoe Street is occupied by the George Mayer Hardware Co. During the year the store has been enlarged, new windows put in and in other ways made more attractive and up-to-date. A good scheme of displaying cutlery is carried out by the George Mayer Co.—that of showing this line, as well as silverware and hollowware in cases directly in front of the door—so that all entering the store must see this line of goods. Mr. Mayer said that it was surprising to note the number of sales of these goods that were thus made to customers who had entered the store looking for some other article.

An attractive store is that of Troxel Bros., also located on Hardware Row— at No. 1508 Arapahoe Street. A specialty is made of shelf Hardware and house furnishing goods—in which lines the firm carry a very complete stock.

C. M. White who is the manager of the Denver Hardware Co., another of the stores of Hardware Row—1621 Arapahoe Street, said that business was good, and that the outlook had never been better during his years in the Denver trade. A good stock of shelf Hardware is carried which is the end of the business pushed hardest by the Denver Hardware Co.

At 1626-30 Arapahoe Street is the big store of the McPhee & McGinnity Co. This firm carry a large line of builders' Hardware and very complete stock of paints and painters' supplies, as well as one of the largest stocks in Colorado of window glass. A large contract building business is carried on by this firm, who do business throughout eastern Colorado. Probably no other city in America has as many large Hardware concerns doing both a retail and jobbing business, located as near together as are these six Hardware firms here in Denver on Arapahoe Street, which is thus properly termed "Hardware Row."

But it must not be thought that all of Denver's Hardware stores are here—the large retail store of Kittering-Benway Hardware Co. located at 516 Sixteenth Street does a thriving business—and is well located for an exclusive retail trade.

Down in Denver's wholesale district is the Moore Hardware and Iron Co. occupying nearly half a city block at 1529 to 1539 Fifteenth Street. Shelf and heavy Hardware are carried and an exclusively wholesale trade is carried on.

The John C. Moyer & Son Hardware Co. also do a jobbing business and are each year enlarging their field. In fact the local Hardware jobbers here in the West are constantly gaining a larger business—due to the fact that they are enabled to make prompt shipments and have in stock the goods that are best suited to the local trade demands.

Another of Denver's progressive retail concerns is the Owl Hardware Co.,1516 Curtis Street. This house enjoys a good pick up cash Hardware trade.

The Gillette Safety Razor--

Has the FIRST, and only NEW idea in RAZOR BLADES for OVER FOUR HUNDRED YEARS

Exact Size Complete Razor.

Although on the market for less than two years, the **Gillette Safety Razor,** judging alone by actual sales, is to-day used, appreciated and endorsed by *more* enthusiastic, discriminating shavers during this time than *all* of *the rest* of the so-called safety razor purchasers in the same period.

There is a reason for the success of the **Gillette Safety Razor.**

It is as *different* from other *so-called* safety razors as *other so-called* safety razors are from the old-fashioned razor.

The dealer who handles the **Gillette Razor** makes *liberal* profits, for the fixed retail price of $5.00 for a set *is*, and *will* be *maintained* under U. S. Patent laws, thus assuring every dealer a full profit.

The blades are as thin as paper, as hard as flint, as tough and flexible as whalebone.

The Gillette Safety Razor is made by *automatic machinery insuring perfection* and *uniformity* in every detail and a never varying quality which is so often found in the old-fashioned hand-make razors and blades.

The Gillette's Advantages

Our manufacturing facilities have been increased recently to meet the enormous and growing demand for the **Gillette Razor,** and this demand proves that it will certainly pay YOU to investigate at once the many advantages that are now offered in handling this phenomenal shaving device which is the talk of the civilized world.

Remember -- The Gillette while having *many imitations*, has no direct competitor, *is in a class by itself*, is here to stay, and its patents will be fully protected and all infringements on its rights will be prosecuted.

TWELVE BLADES.

TWENTY-FOUR SHARP EDGES

A Paying Proposition

No shaving proposition to-day offers you the inducements that the Gillette does.

Write to-day for further particulars and do not allow yourself to be persuaded to do otherwise by other *so-called* safety razors that have been put on the market, due solely to the phenomenal success of the **Gillette Safety Razor.**

Gillette Sales Co., 1104 TIMES BUILDING, BROADWAY, NEW YORK CITY.

Are You A Gillette Safety Razor Dealer?

Then you will receive the benefit of the enormous advertising plans that are now being worked out, embracing Magazine publicity, Signboards, extensive catalog distribution, and in fact, *every known* and *up-to-date* method in the science of advertising.

By our publicity methods we are interesting and appealing to *millions* of shavers *every* month.

We are *spending more money* in *making known* the unique advantages of the **Gillette Safety Razor** than is being spent by all the combined, *so-called* safety razor manufacturers in the country, which benefits every Gillette dealer.

That this advertising is producing the desired results is a fact which we will prove to every **Gillette** dealer to his entire satisfaction.

If you are not selling the GILLETTE SAFETY RAZOR, Get into line, for once in it, means you are there to stay.

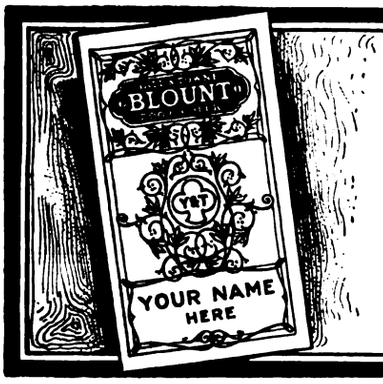
The "Gillette" cannot be put together in any way but the right way, and when so put together the blade is concaved and both edges are in the right position in their relation to the guards to be used with absolute safety.

Exact Size Set, Complete.

Greater Profits--- Greater Satisfaction

There are not only greater profits in handling this razor, but greater satisfaction because the **Gillette Safety Razor** is fully guaranteed, is backed by *responsible* and strong financial interests, and the razor itself is already endorsed by several hundred thousand users who are voicing its merits throughout the civilized world.

You see **Gillette** advertisements everywhere, and up-to-date dealers are joining our ranks every day.



Do not delay, but write us *at once* and let us show you evidence of such a nature that will make you regret the delay which for some reason unknown to us, has resulted in your name not being on our list of dealers.

ADDRESS TO DAY.

We Help Dealers Sell Blount Door Checks

TO push a line or not to push a line—that's the question. It's often decided in the negative because the Dealer has not time to study up plans — no time to mould the shot. In selling Yale & Towne Blount Door Checks, we furnish the AMMUNITION—booklets, blotters, folders, seals, envelopes, display cards, and a crisp little story called "The Peacemakers"—most of them imprinted with your name and address.

We lay the plans—a little booklet, "Suggestions for Selling" tells just WHAT to do and HOW to do it. YOUR part is to pull the trigger.

We help you ADVERTISE in newspapers too—send you electrotypes of advertisements that SELL goods—or write you special advertisements if you wish—furnish you street car cards, etc. All this is FREE if you write and ask for it.

The Yale & Towne Mfg. Co., 9-15 Murray St., New York

DENVER DEALERS PROSPEROUS.

(Continued from page 34.)

Out at 2628 Lorimer Street is the Flood Hardware Co. who carry a well sorted stock of builders' Hardware and tools and cater especially for the family and home trade.

Stoves and ranges are an important part of the business here in Colorado, but in many towns this branch of the Hardware business seems to be largely confined to the furniture and house furnishing credit stores. By a little effort on the part of the Hardware men this part of their business could be won away from the furniture trade, and from the installment houses. The stove business belongs to the Hardware man, he, of all merchants, is best qualified to handle in an intelligent manner, this branch of retail merchandising. Selling stoves sells other house furnishing and kitchen goods, and selling a good stove makes a permanent customer for the Hardware store.

HAMMERNAIL.

THE ST. PAUL TRADE.

It is not often that conditions all around are as favorable as just now. Fair to good crops, fair prices, a steady market, with an occasional advance and no decline, certainly is all that the merchants could ask for. These are the present conditions, and the future seems to be equally good, if not better. From all sources the same information comes that future business is being placed in such large amounts, so much so that the iron and steel market seems assured as steady for the first six months of next year. We advise the trade to place contracts for next Spring, as we feel that present prices are good, with the great possibility of advances. All the jobbers are looking forward to the meeting to be held in Washington the second week in November, and with a good deal of interest, as much will be talked about and much done to benefit both the jobbers and retailers. We must and do consider how we can benefit our customers and sincerely hope to do both them and ourselves a whole lot of good by consideration of mutual interests.

HACKETT, WALTHER, GATES HARDWARE CO.

MINNEAPOLIS REPAIRING DAMAGES.

About the only thing that is of interest to us at this time is trying to adjust our loss in the recent fire and get back into business. We know absolutely nothing about the real situation outside of our own affairs. We do know, however, that we are losing every day a large volume of business, and we are anxious to get back as soon as possible. It will probably be six weeks to two months before our store will be in shape for us to go back into. The actual loss by burning will probably not exceed $30,000, but the entire stock is severely damaged by the floods of water coming from twenty-five streams playing into the building for between three and four hours. The delay in adjusting has already caused thousands of dollars further damage. Meanwhile, we hired another store during the progress of the fire and opened our offices at eight o'clock next morning in that location and have leased another store temporarily that we have fitted up with shelving and are putting goods in there now, and will be ready in a day or two to open up business with a small, new stock, not in a position to buy heavily, as we do not know what will become of our own stock, although badly damaged, will to a certain extent take the place of other goods, even though sold at fire sale prices. We were fairly well covered with insurance, stock valued at approximately $150,000, with $120,000 insurance.

W. K. MORRISON & CO.

THE SAN FRANCISCO TRADE.

The staples of the California farmer continue to make their usual gratifying exhibit. There is some decline in agricultural products, due to offerings of the new crops, but that always occurs during the Fall months, and is therefor accepted as the regular annual condition. But the wholesalers and retailers alike report continued expansion in the demand for all sorts of merchandise, with collections good and money in liberal supply and readily accessible. The industrial interests are making similar reports. The farmers and orchardists all over the coast States, from the wheat grower of the North to the orange grower of the South, are in such excellent financial condition that they are very independent with their produce and are inclined to be stubborn in their general holding back for better prices later on. It is an old and trite saying that when the farmer is prosperous the nation is likewise, but it will bear repetition. Present conditions are an emphatic illustration of it. Bankers base their plans on it, and merchants extend their credits on it. The California farmer was never in better financial condition, hence prosperity here still abides with the country.

Business halted one day last week, on the 9th instant, while Yom Kippur, the day of atonement, was observed, and throughout the trade and city orthodox Hebrews devoted the day to repentance and prayer. Stores with drawn shutters and closed doors emphasized the importance of the holiday. Its observance generally and its effect upon city business seemed more noticeable than ever before. Politicians noted the light registration in districts where the Hebrew vote is strongest, for under the old race law civic duties are forbidden for Yom Kipper. Old time Hardwaremen of San Francisco remarked that it was only in recent years that the observance of the greatest of holidays in the Hebrew calendar had become noticeable and that it called attention to the rapid growth of the Hebrew population of this city.

Jobbers in the trade are pleased for the reason that they are now able to do business in British Columbia without paying any special tax. The British Columbia Legislature some time ago passed a statute imposing a tax of $50 on all commercial travelers who entered that province from outside places, and last week it removed the tax. A somewhat similar statute was passed by the Quebec Legislature at its last session. The Quebec Government makes the tax $300.

The Palace Hardware Company, the oldest house in San Francisco, making the sale of fine Builders' Hardware a specialty, was started in the year 1880, under the name of the Latson Hardware Company, and was located on New Montgomery Street, under the Palace Hotel. In 1891 Frank Latson retired, his interest having been purchased by Edmund S. Gray, Monroe Greenwood, Robert Wisnom and Lemuel T. Lewis. The present name was then adopted. Shortly after the Greenwood-Lewis interests were purchased by O. F. Sites, formerly for many years associated with the First National Bank of Oakland. In 1898 death removed Mr. Gray from the personnel of the corporation. Frank H. Ellis, president of the company, was one of the original incorporators of the Latson company, and for twenty-five years he has given of the best that was in him towards the upbuilding of the business. His labors of a quarter century rank him one of the oldest Builders' Hardwaremen now in active service in San Francisco. The Latson-Ellis people were the first to introduce the sale of P. & F. Corbin's lines on the Pacific coast. "Corbin" goods have always been their specialty and the large number of handsome buildings in San Francisco finished with this product are not only monuments to the company's zeal and energy, but to the unqualified quality of "Corbin" manufacture. The officers of the Palace Hardware Company are: President, Frank H. Ellis; vice-president, Robert Wisnom; secretary and manager, O. F. Sites.

A party of British shareholders in the National Steel and Wire Company, which is fighting the Steel Trust, was here several days the past week, having arrived from the East by way of Los Angeles in a private car. The visitors are making a tour of this country, inspecting the various plants of the corporation, one of which is located in this city, and are accompanied by Everett Webster, president of the corporation; J. C. Rogers, of Salem, Mass., vice-president of the company; R. C. Caples, traffic manager of the same concern, and Cowley Lambert, Colonel Swaine, W. E. Slaughter, J. Watt Davis and Felix T. Cobbold, all men

Digitized by Google

of great wealth, the majority of whom have never been in this country before. Their visit to Los Angeles has been followed by a report that it was for the purpose of looking over the field there for business and acting upon recommendations from the home directors and stockholders that the company extend its manufacturing interests. Upon this subject Mr. Caples said: "The gentlemen who have come so many miles to see this country have combined business with a great deal of pleasure. As our company is a large manufacturer of wire, its stockholders are naturally interested in the rapid development of electric railroads throughout the country, and the growth of these systems in the West has greatly surprised these gentlemen from England, who were most enthusiastic over the operation of the lines in Southern California. Two of our party are the principal owners in the White Pass and Yukon Railroad, and others are interested in several big enterprises in the United States. From here we go to Portland to visit the exposition."

On the evening of October 14 Albert Gallatin, pioneer of California, capitalist and until a few years ago known as one of the most prominent Hardware merchants in the State, died suddenly at his home in this city. Apoplexy was the cause of his death. He was sitting with his family at dinner, when he suddenly dropped his arms to his side and expired in a few minutes. He was born in New York seventy years ago and came here in pioneer days and went into the gold mining industry, but was not a very successful miner. Then he entered the Hardware business at Sacramento and finally became one of the members and the president of the Hardware, Implement and Miners' Supply store of Huntington, Hopkins & Co., with a large branch in this city. Five years ago he retired from business. He died possessed of a large estate. Industrial Press Association.

GREATER FOREIGN TRADE.

METHODS BY WHICH FOREIGN MARKETS MAY BE WON.

Consul Skinner, of Marseilles, thinks there are good opportunities to increase America's foreign trade. He finds fault with some of the prevailing methods and points out such as would seem to him to lead to success, or at least to be worthy of trial. He favors the national standardization of products sold from samples, such as cereals, cottons, oils, greases, etc. He writes, replying to questions submitted to him:

Americans willingly travel for pleasure, but they are seldom inclined to live abroad permanently for the purpose of engaging in business. In Great Britain and Germany, our chief competitors, there is a surplus of men, who naturally seek trading centres abroad, where they act as intermediaries for the sale of British or German goods. The important foreign firms are always harboring one or more "volunteers," young Englishmen or Germans, who leave home to prepare themselves for this work. We have comparatively little material of this sort to draw upon, and therefore such foreign business as has not actually sought our manufacturers has usually been obtained by working through existing foreign commission firms, the American exporter remaining a stranger in both cases to the requirements and possibilities of the consuming market. Now, there is a surprisingly small number of American manufacturers actually possessing an export trade, but as it is fairly representative the European concerns handling the business see little or no advantage in extending their lines, to the confusion of their own buyers, who would be in doubt when confronted by similar articles from different manufacturers. The result is that we go round in a very narrow circle.

HOW TO SECURE TRADE

It follows that a large number of American manufacturing firms find themselves practically excluded from foreign markets, unless they have the energy and capital to undertake to represent themselves. The natural remedy, it seems to me, would be to organize selling companies, the stock to be apportioned among manufacturers of allied, but not competing lines, these selling firms to establish selling agencies abroad on a practically co-operative basis. We cannot sell American goods abroad without agencies through which to sell them.

Another class of American manufacturers have exclusive contracts with large selling firms in New York, who handle their output and get such foreign trade as brokers bring to them. This method answers very well with a demand greater than the supply, but it certainly prevents trade expansion when the opposite is true. I should think that syndicates of manufacturers who have thus divested themselves of control of their own sales might profitably consider whether they should not require their central sales agency to adopt the policy of going abroad to build up and hold business.

THE GREATEST NEED OF THE INDIVIDUAL.

We come now to "the greatest need of the individual American manufacturer in his foreign trade." Probably his first need is to convince himself that he really wishes to engage in foreign trade. The American manufacturer will go to his annual convention and vote for resolutions about foreign trade; he may have some vague notion that the Government ought to bring foreign trade to his very door; he will write to consular officers for addresses, and he will go abroad to obtain rest, but only in exceptional cases will he take the time to seek knowledge about his own private business in the foreign markets in which he might sell his wares. Now, all the generalizations and dogmatic assertions of all the pretended experts in the world are worth less to him than knowledge at first hands, which he can obtain for himself in a few weeks at trifling expense. The great signal successes of American manufactures in the Old World have been made by firms who have simply extended their domestic operations abroad, applying American methods in their own way. There is very little that is mysterious about this foreign trade, yet American firms which will set up branches without hesitation 3,000 miles from their bases in the United States see something exceptionally difficult about doing the same thing abroad.

To-day the greatest obstacle to a more rapid increase in our foreign business is the indifference of the vast majority of American manufacturers, and a lack of persistence, or what the French call *esprit de suite,* among many others. The Government is doing all it can with the facilities at its disposal to increase our trade and to find new markets, manufacturers through their trade organizations are doing a good deal, and we have a trade journalism without an equal in the world, but these several instrumentalities, if they were absolutely perfect, could not increase our export business without a greatly stimulated practical interest in the subject on the part of individual firms, followed by practical efforts to do something for their own account.

AMERICANS LEARNING TO PACK.

A recent issue of the *British Trade Review* (July 1) calls attention to the fact that the goods going out of the United States into foreign ports are by no means so badly packed as some people would have the public believe. In pointing out existing evils affecting British trade, the *Review* says:

Sufficient attention is not given to the necessity of packing in a small compass. For transmission to a distant colony this is important, because the smaller the cubic measurement in which the goods can be packed the less is the freight, storage, cartage, wharfage, and sometimes the duty.

American goods, and sometimes German goods are more closely packed than British goods, without in any way increasing the risk of breakage or damage. Whenever a duty by measurement has been placed on an article in Victoria, it has been found that the Americans and sometimes the Germans, have proved themselves able to place a greater quantity in a cubic foot than the British. The trade in lamp glases, bottles and in some other items has been seriously affected by the difference in the closeness of the packing.

A feature of the United States packing is the more general practice of making up articles into trade packages—that is into packages that can be bought and sold in the cases in which they are imported. Clocks, lamps and many such articles are sent in cases of unvarying size and containing a suitable number of articles for sale to retail shopkeepers, when similar goods from the continent or from Great Britian would be sent in large cases of irregular size, designed for no other purpose than to convey the goods to Melbourne. Further, the United States use largely specially prepared pitch paper for lining cases, where the British use metal. The experience in Victoria is that the pitch paper is as effectual in preserving goods as metal, and that it is lighter and more convenient.

In the boxing or "get-up" of small goods the United States manufacturers excel. They use cardboard boxes in numerous instances where the British pack in brown paper parcels, and the United States practice is held to be preferable, for the reason that the box is suitable for placing on shelves of a shop. As regards the goods which are packed in boxes in Great Britain and the United States, the boxing is nearly always better done in the latter country, the boxes being stronger and more sightly. British goods can commonly be picked out in the stock of a Hardware store by the greater number of broken boxes. The excellence of the manila paper and cardboard boxes used in the United States has been a considerable factor in advancing American trade.

IS THE CLIPPING OF HORSES BEFORE WINTER ADVISABLE?

The clipping of horses in the fall has many advocates and also many opponents, as is the case with everything debateable in this world, but, although the removal of a heavy coat of hair from the horse before cold weather would seem contrary to the decrees of nature, still those favoring the practise seem to have the best of the argument. It is probable where injurious results have followed clipping they have been caused by inattention to blanketing the horse when standing outside or in a cold stable.

The following appeared in *The Blacksmith and Wheelwright*

Digitized by Google

recently in reference to correspondence from opponents of clipping:

"Our correspondents are slightly in error in their apprehension of the facts. Horses are not usually clipped in either the coldest or the warmest weather, but in the spring or fall or both. Nor are they clipped in most cases for the purpose of improving their appearance. Numerous tests have been made to ascertain the effect of clipping and in all cases they have been favorable. As an authenticated instance of this the Buffalo Street Railway Company may be cited. When its cars were run by horses instead of electricity they had their horses clipped in the fall and in the spring, and a careful comparison showed that clipped horses did more work, felt better and were in better health when clipped. They lost practically no horses from pneumonia or other diseases after they were clipped, while before this was done a number of horses died every year from these diseases.

"We relinquish to no one a greater admiration for the humane treatment of all animals, and especially horses, but there are more horses injured every day from over-loading, ill-feeding and bad treatment due to ignorance or cruelty or both, than in ten years by clipping. It is a common assumption that nature gives nothing unless it is needed; that the horse was given its coat of hair for a certain purpose and the animal should not be deprived of it. Possibly in its state of nature, when there were no blankets or staples, the coat of hair that is shed every year after the cold weather is over is as wise a provision as could be made, but under present conditions, clipping is an improvement upon nature, just as the trimming of trees of branches that nature has given them is an improvement. The only requisite is that the pruning shall be done wisely. It is just the same when clipping a horse.

"In cold weather when a horse is in the stable or is standing blanketed it does not need a thick coat of hair, and when it is being used the animal is much better off without it. The editor of this journal has had his horses clipped for years, and chiefly because that with a thick coat they prespiree easily on being exercised, and when the hair is once soaked with perspiration it is almost impossible to get it dry and prevent a decided tendency towards colds, pneumonia and rheumatism."

FEWER POCKET KNIVES SOLD.

"There is not so much call for pocket knives in New York as there used to be," said a man who has been in the cutlery business in this city for forty years. "There was a time when every man carried a pocket knife, but now you might stop fifty men in the downtown section and ask for a knife and not more than a dozen could accommodate you.

"We do not carry anything like the stock in this line that we did in other times. Now one person in an office or business house keeps the pencils sharpened for the boss and the help. The manicure shop also has cut into the field of the pocket knife, and men who do not patronize the manicure shop resort to nail scissors and files.

"Some of the old brands of knives which used to be good sellers the year round have entirely disappeared from our cases, and nearly so from the factories. When did you ever use a Barlow knife? There was a time when every boy had one. For the smaller youngsters there was the dogknife. It was so called because the handle was an imitation of a dog on a run. The dogknife used to be a sort of necessary in a boy's stocking on Christmas. I haven't seen or heard of a dogknife since the civil war.

"A long time ago the pocket knife most in demand was the 4 inch spring back. One reason why it had such a run was that it was a mighty handy weapon in a fight. When the blade was open it stayed put until you pressed a spring which closed it. Many who could not be induced to carry a revolver did not hesitate to keep the springback knife where it would come handy.

"The old horn handles have nearly disappeared from the city. They are still used in the country stores, but the city man who carries a pocket blade wants something that will not wear out his pockets, and which will not be any extra weight.

"There used to be a combination knife that was a good deal in demand. In addition to its blade it contained a corkscrew, a pick, an awl, and a small pair of scissors. There is no demand in the city for such a knife now. The corkscrew has its uses still, and its place, but its place is on the sideboard. And then, you know, most decoctions as they are now put up do not require a corkscrew. When a man wants a drink in this busy age he wants it quick, and the bottles are so arranged that you unscrew the arrangement at the top and the drink is ready.—*New York Sun.*

LANDLORD AND TENANT.

Copyrighted 1905, by William C. Sprague, President The Sprague Correspondence School of Law.

NO. 6. THE DURATION OF THE TENANT'S TERM.

It is usual to stipulate in the lease or rental agreement the time when the tenant's occupancy of the premises is to terminate. Frequently the length of the term is stipulated, with a provision added to the effect that the term may be renewed on the premises retained by the tenant for a certain time longer, at his option.

But there are cases where the term is not definitely stated, or where the provision in the lease is not valid for the length of time agreed on. If the length of the term is stipulated, and the stipulation is valid, little difficulty can arise; but where the length of the term is for any reason uncertain, questions arise that frequently lead to trouble between the landlord and the tenant.

Where the length of the term is not stated, the intention of the parties must be determined by the conditions and circumstances of the case. The main factor going to determine the intention of the parties is the manner in which the rent is payable; as, if the rent is so much a week, or so much a month, or so much a year, the courts would construe the tenancy to be by the week, or month, or year, as the case may be. But it has been held that where the property is leased for farming purposes, the presumption is that the tenancy was for a year at least. The rent-paying periods is not taken as conclusive evidence of the intentions of the parties; it is only taken as presumptive, and evidence may be introduced to show that the tenancy was for a greater or less period than as indicated by the rent periods.

The mere fact that the rent is payable monthly, quarterly, yearly, does not control in all cases. As, where a lease provides for an annual rent, payable monthly, it is held to be a tenancy from year to year. Permission to occupy where no rent is reserved, is not a tenancy from year to year.

An agreement that a tenant may stay as long as he pays his rent, is held to be void; such an agreement amounts to a tenancy from year to year, or from month to month, according to the rent-paying periods.

It is a general rule that every agreement as to the duration of a tenancy must, in order to be binding, fix its termination, either by date or by some circumstance other than the pleasure of the parties.

As stated, the time of termination may be stated in the alternative; that is, a certain time or a certain other time, at the option of the tenant. It is said that an agreement that a tenant may occupy premises until they are sold is valid.

Frequently leases read to make the tenancy for a fixed time, subject to termination at any time upon so many days' notice. Such agreements are valid, but it should be understood here that so many days, weeks, or months' notice in the lease means, so long notice before the termination of one of the rent periods So that if the lease is by the month, subject to termination at any time on a week's notice, this is implied to mean a notice given one week before the expiration of the monthly period. So that if the notice were given only two days before the end of the month, the tenancy would not expire seven days after the giving of the notice, but at the end of the following month.

Much trouble has arisen over the misconception of the meaning of the expressions "week's notice," "ten day's notice," and so on. The meaning is so many days' notice ending with the last day of the rent-paying period.

Of course there is nothing to prevent the parties from agreeing that on certain notice a tenancy may expire at any time during a month, but such an intention should be clearly expressed, by saying, for instance, that if the notice expires in the middle of a month, rent shall be paid for the fractional part of the month up to the date on which the notice expires.

A tenancy does not expire until midnight of the last day of the term.

(To be continued.)

WHY HE CHANGED HIS MIND.

"I understand old Closefist has bought an automobile."

"Why, I heard him say he would not give his carriage and horses for all the autos in Texas."

"Yes, but his wife prevailed on him to get the auto."

"Why so?"

"Well, she found out that her daughter intended to marry the coachman."

"Well?"

"Well, she thought it would be disgraceful for her to marry the coachman, so she concluded to get an automobile and save the family from social ostracism by having the coachman become a chauffeur."—*Dallas News.*

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Carlisle, Pa.—The Wagner Hardware Co. is engaging in the wholesale and retail Hardware business.

Chester, Pa.—John Fisher has recently opened up a Hardware store.

Clio, Ala.—The Clio Hardware Co. has been incorporated with $4,200 capital stock. Incorporators: A. B. Byrd, M. Dowling and E. C. Echols.

Colville, Wash.—Frennessen & Montgomery are engaging in the Hardware business.

Colville, Wash.—The Colville Hardware Co. has engaged in business here.

David City, Neb.—The Havlik Hardware Co. has been incorporated with a capital stock of $25,000.

Ensley, Ala.—The Smith Hardware Co. has engaged in the Hardware business here.

Ft. Wayne, Ind.—Johns & Thompson Co. has been incorporated to deal in Hardware; capital stock, $30,000; directors, Charles S. Bash, Alfred L. Johns and J. Alfred Thompson.

Harper, Kan.—The Westfall-Campbell Hardware Co. has been incorporated. Capital, $20,000.

Landis, N. C.—The Landis Hardware Company has been incorporated with $10,000 capital. The incorporators are: J. P. Linn, F. E. Wright, J. C. Deaton, E. L. Linn and C. A. Linn.

Lincoln, Neb.—The Nebraska Hardware Company has been incorporated. The capital stock is $100,000 and the incorporators are: William Patterson, W. E. Jakway, John Forrest and Allen Crosby. The firm was organized to take over the business of the Humphrey Hardware Company and the Patterson, Crosby Hardware Company.

Litchfield, Neb.—C. N. Moore is engaging in the Hardware business.

Peoria, Ill.—Hard & Kimball have opened up a Hardware store.

Uxbridge, Mass.—The Uxbridge Hardware & Furniture Co. has been incorporated to deal in Hardware; capital, $15,000. President and treasurer, Henry S. Farnum; clerk, Charles J. O'Hara.

Winfield, Kan.—M Stephen is erecting a new building in which he will carry on the Hardware business.

Changes and Improvements.

Arcadia, Minn.—N. Lehrbach has sold his Hardware business to W. C. Bohrnstedt, of Brookings, S. D., and W. E. Muir. The new firm will be known as Bohrnstedt & Muir.

Asheville, N. C.—The Hardware establishment of Penniman Bros. & Co., one of the oldest established Hardware firms in the city, have sold their business to Gay Green.

Buffalo, N. Y.—Weed & Co. have erected a new building which is considered as the model wholesale Hardware house in the United States.

Canton, Mo.—J. W. Ray has purchased the Hardware stock of the late A. True and will continue the business at the old stand under the firm name of J. W. Ray & Sons.

Charleston, Ill.—J. H. Bails has purchased the Hardware stock of Stull Bros.

Charleston, S. C.—The Coleman-Wagener Hardware Company have added a large three-story building to the rear of their retail store, to be used exclusively for their wholesale department. Their growing business rendered the improvement necessary.

Cleveland, Ohio.—The Cleveland Hardware Co. has increased its capital stock to $1,000,000.

Concordia, Kans.—The Linville Hardware Store has succeeded to the business of Theo. St. Pierre.

Elmwood, Neb.—H. W. Beaver and F. C. Canine have purchased the Hardware business of F. C. Voorhees & Co.

Gilroy, Cal.—Herbert E. Robinson, of the Robinson Hardware Company, has purchased from Sydney Smith ninety-six and one-half front feet of business property for the purpose of having more room to carry on his already extensive business.

Goshen, Ind.—A deal has been consummated whereby John P. Blough, Menno Blough and Andrew J. Mehl come into possession of the Hardware store of C. L. Landgraver.

Grand Junction, Colo.—Louis Schmidt has purchased the Hardware stock of E. M. Slocumb.

Hillsboro, Tex.—Heibert & Schmidt have purchased the Hardware business of Maas & Panteratz.

Indianapolis, Ind.—The Trout Hardware Co. of Chicago has purchased the entire stock of the Indianapolis Hardware Co. amounting to about $20,000.

Ithaca, Mich.—The Hardware firm of Thompson & Sanderhoff has been changed to Otto Sanderhoff, he having just bought out his partner's interest.

La Crosse, Wis.—The building and entire stock of Hardware formerly occupied and owned by Soren Jensen has been purchased by William Pfafflin.

Lafayette, Ind.—The name of the Johnson-Barnes Hardware Company has been changed by permission of the court so as to read "Johnson Hardware Company."

Lynn, Mass.—The business of the Rowe-Lawrence Hardware Company has passed into the proprietorship of Earl Lawrence, the junior partner, Mr. Rowe retiring.

Lyons, Kan.—Taylor & Coffman have purchased the entire business of the Blair & Gibson Hardware Co.

Lyons, Neb.—Heinbelman & Shaw have purchased the Hardware business of Clements & Ustik.

Macomb, Ill.— Chas. T. Worley has purchased the Hardware stock of Edward Miller.

Morris, O. T.—L. W. & R. B. Pugh have succeeded to the Hardware business of the Morris Hardware Co.

Nelson, Neb.—C. B. Case has purchased the Hardware business of Hodges & Ewing.

Odessa, Wash.—The Odessa Hardware & Implement Co. is erecting a new business block for its own occupancy.

Onawa, Ia.—J. O. Johnson has sold his interest in the Hardware business of W. Goodman.

Oregon City, Ore.—J. C. Zinser has purchased the Hardware business of Fairclough Bros.

Overbrook, Kans.—E. C. Fitch has sold his Hardware and tinning business to W. M. Popkins.

Parkersburg, W. Va.—The Chancellor Hardware Co. is erecting a new building, which will be five stories high, having a frontage of 42 feet and which will be 110 feet long.

Portland, Me.—L. W. Bradstreet, the wholesale cutlery and Hardware man, has bought out the stock of the I. D. Cushman toy store. He has moved his stock into it and will continue the business of both lines on a larger scale, wholesale and retail.

Randolph, Neb.—Blenkiron Bros. have sold their Hardware business to R. L. Nance.

Rose Hill, Iowa.—J. L. Brown has been succeeded in the harness and Hardware business by Brown & Hensel, the same firm succeeding J. W. Sarvis in the Hardware business.

Spokane, Wash.—The Holley-Mason Hardware Co. is erecting two large buildings to cost upward of $160,000.

Stromsburg, Neb.— Carlson and Olson have sold their Hardware business to Greene & Erickson.

Topeka, Kans.—The Coughlin Hardware company has opened a branch store at St. Mary's. It is a retail house and will start with a new $8,000 stock.

Troy, Kans.—W. W. Minter has purchased the Hardware store of Rigers & Son.

Weeping Water, Neb.—H. E. Mason has succeeded to the Hardware business of Mason Bros.

Fires.

Canal Dover, Ohio.—The Hardware store of Myers Bros. and the building in which it is located were partially destroyed by fire recently. The loss amounts to $2,000.

El Paso, Tex.—The El Paso Hardware Co. sustained considerable loss recently by fire, owing to an explosion occurring in their store.

Minneapolis, Minn.—The Morison Hardware building has been destroyed by fire, causing a loss of $50,000.

St. Catharines, Man.—The Hardware store of Coy Bros. & Southcott suffered a loss of $4,000 by fire recently, which was caused by spontaneous combustion.

Machine Tool Company, which has had its place of business here, is to be located in Springfield, Mass., where the company has taken quarters on the third floor of the Morgan Building, where the business will be conducted on a more extensive scale. W. S. Davenport is the treasurer and general manager of the concern.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Incorporations, Etc.

Anniston, Ala.—The Anniston Stove Works has recently been organized and the plant is now in full operation.

Boston, Mass.—The Highland Foundry Co. has been incorporated with $15,000 capital. Objects, to manufacture stoves, ranges. Edwin Chapman, president; Livingston Cushing, treasurer.

Boston, Mass.—The National Screw Company has been incorporated. Capital, $50,000. The incorporators are: Fred. B Oliver, Alfred H. Luce and George M. Faulkner.

Brooklyn, N. Y.—The New York Roller-Washing Machine Company has been incorporated with a capital of $50,000. The directors for the first year are as follows: William G. Miller, of Freeport, and William P. Miller and Henry L. Maxson, of Brooklyn.

Buffalo, N. Y.—Buffalo Razor Grinding Co. has been incorporated to manufacture razors, etc.; capital, $500. Incorporators: Niel Nielson, G. Adolph Kayser and Oscar Kayser.

Buffalo, N. Y.—The F. B. Manufacturing Company has been incorporated to manufacture mop machines. Capital, $25,000; directors: W. J. Sanders, I. D. Flanders, O. L. Harrison.

Columbus, Miss.—Milton Moore is erecting a factory here, in which he will engage in the manufacture of stepladders.

Columbus, Ohio.—Otto Hunt has engaged in the manufacture of gas ranges and stoves, under the name of the Sun Rays Stove Co.

Coshocton, Ohio.—The Spellacy-Raiff Company, which was incorporated with a capital of $25,000 by D. A. Raiff, J. M. Morris, F. E. Pomerene, L. A. Smith and Mat Spellacy, will engage in the manufacture of enameled ware.

Hamilton, Ont.—The Canadian Hart Corundum Wheel Co., Limited, has been incorporated. Capital, $75,000.

Jeffersonville, Ind.—Brown Manufacturing Company has been incorporated to make and sell household articles, Hardware, etc. Capital stock, $3,000. Philip C. Brown, Conrad P. Graft, James H. Duffy, incorporators.

Kansas City, Mo.—The Western Wheelbarrow Mfg. Co. has been organized and the plant put into operation. The cost of the plant is $30,000.

Los Angeles, Cal.—The National Steel and Wire Company are building a new steel and wire plant at Los Angeles, Cal. The new plant will cost about $2,000,000, and give employment to from 500 to 1,000 men.

Newfane, N. Y.—Newfane Hardware Co. has been incorporated to manufacture and deal in Hardware; capital, $20,000. Incorporators: Bert S. Pettit, James A. Kelley and Charles J. Miller, Newfane, N. Y.; Robert D. Wilson and Selden D. Redman. Lockport, N. Y.

New Haven, Conn.—The M. B. & F. S. Hubbell Co. has been incorporated with $25,000 capital. The incorporators are: Mortimer B. Hubbell, Fenelon S. Hubbell and Carl A. Mears, of New Haven. The object of the corporation is to manufacture dairy implements, establish creameries and deal in dairy products.

Springfield, Mass.—Lynn Tube Trolley Track Co. has been incorporated to deal in Hardware specialties; capital, $40,000. President, Robert Lynn; treasurer, Herbert J. Lynn.

Changes and Improvements.

Anniston, Ala.—J. H. Eldridge, of Carrollton, Ga., is about to establish a trunk factory here and will leave Carrollton.

Chelsea, Mich.—The Glazier Stove Co. has filed notice of an increase of its capital stock from $300,000 to $600,000.

Columbus, Miss.—The New South Plow Co. is erecting a new plant, which will be ready for occupancy the first of November.

Columbus, Ohio.—The Findlay Axe and Tool Company has increased its capital stock from $100,000 to $300,000.

Greenfield, Mass.—The cutlery manufacturing business of Nichols Bros. was merged yesterday with that of the American Tap and Die Company. The two companies have been merged into one largely on account of certain advantages in handling business in a corporation.

Hamilton, Ont.—The London Machine & Tool Co. are erecting a large building 180x180 feet, and several smaller buildings, some of which will be one and others two stories high. The buildings will cost about $40,000.

Oneida, N. Y.—The Oneida Community's new factory at Sherrill has been completed. The factory is of brick, three stories in height and stands east of the old plant. Hardware, chains, traps, etc., will be manufactured in the new shop, the old one having proved too small for the business of the company.

Philadelphia, Pa.—Mayer & Co., manufacturers of files, have established an agency with Beaudoin & Lapalme, Montreal, Canada, where a full stock of their files will be carried for the Canadian trade.

Reading, Pa.—David H. Keiser's new factory has been put into operation. One department will be devoted to the manufacture of sheep shears.

HARDWARE OF THE LEVANT.

By Fred A. Gannon.

In Syria and the Levant are good opportunities for American trade, according to consular reports and returned missionaries. C. Bie Ravndal, U. S. Consul at Beirut, Syria, tells in a recent consular report of many opportunities to sell Hardware and other American goods. Rev. Elihu Grant, of Saugus, Mass., who has spent three years traveling about the Holy Land as a missionary, says that there are splendid opportunities for American trade throughout the entire region.

Mr. Grant talks most interestingly on the Holy Land, for he lived outside of the cities and among the people, who exist as did their ancestors in the time of Christ and for centuries before. Many of the people are very poor. Women beg work at carrying dirt in baskets on their head at ten cents a day. The peasants go barefooted to save their shoes. They live in villages, and still go out to tend their flocks.

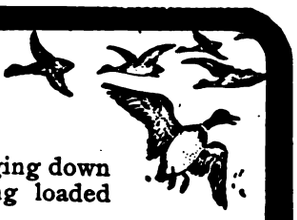
But these people are open to civilization. The Christian schools are gaining steadily, and their graduates adopt civilized ways, hence a demand for modern goods.

There are in the Levant big opportunities for the sale of thousands of farming tools and little articles of daily household use. Farming is still carried on in a primitive way. The Germans are establishing agencies in the big cities of the Levant, and are gaining trade.

An idea of some of the primitive implements used in the Levant is obtained from an inspection of the Oriental exhibit in the Peabody Museum, in Salem. Conspicuous in this collection is the rifle of an Arab shiekh, eight feet long, a bore as big as a shot gun, a flint lock, and gay ornaments of fancy woods, brass and silver. A horse pistol as big as a blunderbuss, and a collection of Moorish daggers appear to have a splendid temper, and they are all in the shape of the Saracen crescent. One blade, however, is almost straight, and is marked "MCCCXII." This date, it will be noted, is nearly two centuries previous to the time of the voyages of Columbus.

Another handsome Arabian blade looks like a paper cutter, 16 inches long. A Moorish powder horn has the characteristic crescent curve, and a Turkish powder horn is shaped like a long necked water bottle.

A number of curious articles are included in this collection—for instance, a lump of stone from the shores of the Red Sea, a brass prayer wheel from Thibet, brass cylinders for nose ornaments from Egypt, metal bracelets, like those worn by Roman gladiators from Damascus, a brass pen case and ink stand from Turkey, and other queer devices.



The use of these ancient things is passing in the Levant. Mr. Grant says that the Moors, who, in the middle ages, were stayed in their wonderful campaign to conquer the world by Charles the Great, now regretfully see the power of their wonderful swords yielding before the forces of civilization.

Civilization is breaking over this cradle of the world, for in the Holy Land are the oldest cities known, American schools are growing in size and influence; American farming, irrigating and milling machinery, steam and electric railroads, windmills and petroleum engines, and other machinery have been introduced into various sections of the Levant in more recent years. Nearly $8,000 worth of Hardware, not including $15,000 worth of iron nails and $500 worth of ice cream freezers and meat grinders, $300 worth of paints, and many other goods were sold by American firms in Beirut last year, many of these goods being offered for sale for the first time to the natives.

There are many opportunities for this trade to expand. Consul Raundal says that Beirut bought $140,000 worth of paint last year, and needs many such articles as pumps, piping, iron beams and small Hardware. He recommends that American houses send salesmen to the leading cities of the Levant where the German and other European nations now have direct relations with dealers, and have considerably increased their business in recent years. If American manufacturers go after it, there is a good field for trade in the Levant.

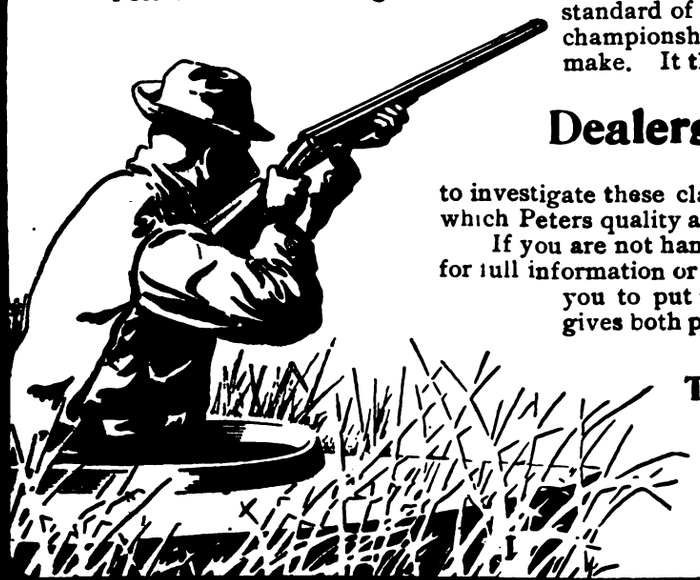
A Clean Shot



One of the beauties of **Peters** "Referee" shells is their clean way of bringing down game. They develop as much velocity and killing power as smokeless. Being loaded with semi-smokless powder, they are extremely clean and do not foul the gun.

Peters "League ' loaded with black powder is the best shell of its grade on the market.

Peters smokeless shells, "Ideal," "Target," "High Gun " and "Premier" are preferred and used with great success by multitudes of sportsmen in every section of the country.

Peters Metalic Cartridges loaded with the famous Semi-Smokeless powder have attained a standard of quality and have won victories in the great championship matches, not approached by any other make. It therefore behooves

Dealers in Ammunition

to investigate these claims and take advantage of the business which Peters quality and Peters advertising are making.

If you are not handling this line at present, ask your jobber for full information or if you prefer, write us direct. It will pay you to put in a stock of Peters goods, the line that gives both profit and satisfaction.

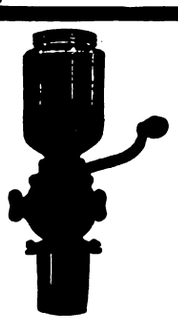
GET BUSY



That is the one secret of success in the Hardware trade.
The rapid sales and quick turning over of capital that

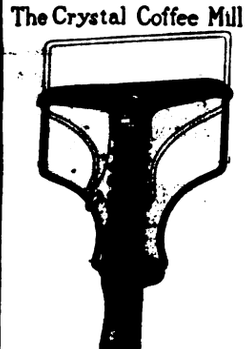
A Line of Arcade Goods

will produce is a revelation to Hardware dealers, and there is a reason for it. Consumers know the excellent quality that the name Arcade signifies. They know that it stands for the highest satisfaction and greatest efficiency that their money can buy. It is this knowledge that makes them demand Arcade Goods when they are in need of any of the 300 articles we manufacture.

To prove their unquestionable merit to any doubting dealer we will send a sample of any article desired.

We show on this page four articles that are money-makers for the dealer.

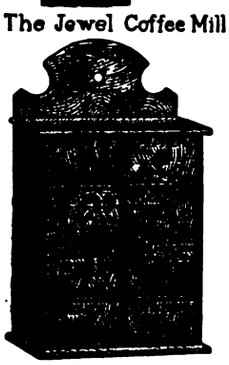
The Crystal Coffee Mill



THE CRYSTAL COFFEE MILL with glass hopper and tumbler. This is the most perfect mill made and with it the most discriminating customers may be interested. Its superior advantages are appreciated on sight.

THE JEWEL COFFEE MILL with glass canister holding one pound of coffee. This is a companion of the Crystal, but sells at a lower price. A liberal dose of these two mills will prove a tonic to your coffee mill trade.

The Jewel Coffee Mill



You can satisfy every requirement of your trade with one of the sixty different styles of wood, glass and metal mills which we manufacture.

The Gem Mop Head.

THE FAMOUS GEM is known to housekeepers everywhere as the one dependable mop head. It is made of the best steel and equipped with the latest improved spring adjustment. It is a most durable, saleable and profitable article.

THE RIGHT SPACE SPICE CABINET is made of hard wood in natural finish. It is strongly built to withstand the roughest usage. Each compartment is labeled and fitted with iron pulls. The general effect is one that appeals to the careful housewife.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Danvers, Mass.—Crown Sporting Goods Co. has been incorporated to deal in sporting goods; capital, $10,000. President, James J. Jolly, Danvers, Mass.; treasurer and clerk, Abram E. De Normandie. Danvers, Mass

Indianapolis, Ind.—The new store of Sacks & Company has been opened. They will sell men's furnishings, hats and caps, shoes, sporting goods and automobile apparel.

Kansas City, Mo.—The Elliott Arms Company has been incorporated with a capital stock of $40,000. The chief stockholder is R. S. Elliott, brother of the noted shotgun expert.

Tacoma, Wash.—E. E. Peterson, formerly associated with the Kimball Gun Store, has formed a partnership with G. A. Bunting, and has purchased the stock of F. B. Shank. They will add a complete stock of sporting goods and bicycles.

Changes.

Alton, Mo.—The Western Cartridge Factory will build another large factory at its plant to be used in the manufacture of shotgun shells.

Bartow, Fla.—Another change in business has taken place in this city and thereby Mr. Grissen becomes part owner of the bicycle shop recently purchased by J. D. Crum.

Columbia, S. C.—W. M. DeLoatch, recently burned out in Scotland Neck, N. C., has opened up in this city.

Freeman Hinckley has succeeded to the management of the Pope Mfg. Co.'s Boston branch, left vacant by the resignation of W. J. Foss. Hinckley was previously assistant manager of the place.

Findlay, Ohio.—Frederick Zoll has purchased a half interest in the business of Homer Kelly.

Mankato, Minn.—Gomer H. Jones, dealer in automobiles, bicycles, musical instruments and cutlery, has sold a half interest in his business to G. E. Hopkins, son of C. E. Hopkins. Mr. Hopkins has been in the employ of Mr. Jones for four months past, and has now become a partner. Mr. Jones has been in business in his present location for seven years, and the increase in his business has made it necessary to have assistance.

Marion, S. C.—W. D. Carmichael, the leading bicycle dealer here, is also proprietor of the leading hotel.

Rome, Ga.—The name of Rome Cycle Co. has been changed to that of the Moore Cycle Co.

Sheffield, Mass.—Miles H. Dunham is disposing of his stock preparatory to removing to Racine, Wis.

Troy, N. Y.—James Lucey, proprietor of the Troy Automobile Exchange, has disposed of his interest in the business to Charles Kelley and William H. Dennin. Mr. Kelley has been identified with the Troy Belting Company, and Mr. Dennin is of the firm of O. Dennin's Sons, brush manufacturers, of Upper Troy. The old firm name will continue. Mr. Lucey was the pioneer in the automobile business in Troy. He was one of the most prominent bicycle dealers in Troy when the wheels were the rage, and as they lost their popularity Mr. Lucey turned his attention to automobiles. Mr. Lucey has sold many automobiles, not only in Troy, but in all parts of the State. He will retire from business.

Miscellaneous.

Lawrence, Mass.—The Archibald Wheel Company is fulfilling a large army contract for the Government at its Archibald plant, in this city. The contract involves over $100,000, and it will probably be a year before it is completed. The work is to make 2,500 wheels for the three-inch field rifles, model of 1902. A carload is being shipped weekly to different arsenals and forts, wherever artillery regiments are stationed.

✤

Automobile sprinkling carts are to be used on the streets of Madrid, Spain.

✤

Edward E. Hinsman, of the Pope Mfg. Co.'s Westfield factory, is credited by a local print with having stated that about 30,000 bicycles will be shipped from the works there during the coming year, this being the number covered by the "annual allotment" made by the Hartford headquarters.

THE CANNING INDUSTRY.

The *Chicago Inter-Ocean* states that the American Can Company is manufacturing cans at the rate of 100,000,000 a month, or 1,200,000,000 a year. This is an increase in eight years of 500,000,000 cans in the annual output. This is a wonderful record when it is remembered that previous to 1850 comparatively few cans were manufactured in this country. The civil war gave impetus to the canning industry, but even with the great armies in the field it was not believed that such food could be trusted to tin cans. In the decade after the war, however, experiments were made in every direction, and meats, fruits, vegetables, fish, and other American products went in cans to the remotest part of the earth. At the beginning of the Spanish-American war, in 1898, there were 2,000 canneries in the United States, which put up annually $72,000,000 worth of canned goods. Most of the canned goods were consumed at home, but the year before the war we sent abroad canned fruits to the value of $1,346,281 and canned meats to the value of $2,000,000. Since 1892 we have been manufacturing our own tin plate. The production of tin and terne plates increased from 42,119,000 pounds in 1892 to 894,4[illegible], 000 pounds in 1901. This home manufacture of tin plates gave great impetus to the manufacture of cans, the bulk of the American tin-plate product going to the can manufacturers.

Ingenuity and activity in can making ran parallel with the invention of new machinery and new processes for the preparation of products for canning. Under new processes nearly every food used by families was put into cans and became an article of merchandise. This led to specializing industries suited to the handling of products grown in particular neighborhoods and to the exploiting of crops and fruits suited to canning. For example, about 3,000 fishing vessels and 25,000 fishermen and 2,000 oyster boats with 20,000 men are employed on the Atlantic coast by canning establishments, and the salmon canneries of the Pacific coast constitute one of our great industries. The tin can has not only contributed to the comfort and convenience of the housekeeper at home and abroad, but it has led to a revolution in the growing of vegetables, great plantations being devoted to the growing of peas, beans, etc., to be canned green.

San Francisco, Cal.—The California Cycling Club has elected the following new Board of Directors: M. J. Madison, L. Hables, W. Mills, E. A. Mitchell, J. J. Barnes, R. G. Wahl and J. Frazee.

✤

That the motor cycle is gaining favor in America is becoming manifest day after day. In England 25,000 motor cycles were sold last year, and at present there are 40,000 registered riders of motor cycles in England alone. The manufacturers look for a boom to come next Spring, and preparations to meet the demand have already started.

SCHOFIELD'S ACME DUST PAN

Never spills dust and dirt as ordinary dust pans do. It can be pressed so snugly to the floor (without stooping) that every particle of dust is taken up. When raised the dust is dumped in the pocket, allowing the pan to be carried without spilling the contents. It is made of steel and will outlast ten ordinary pans. It's a time and labor saver for the housewife and a money maker for you. **Retails for 25c.** Your Jobber sells them. Order a sample doz. today.

PRICES CURRENT

The prices in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

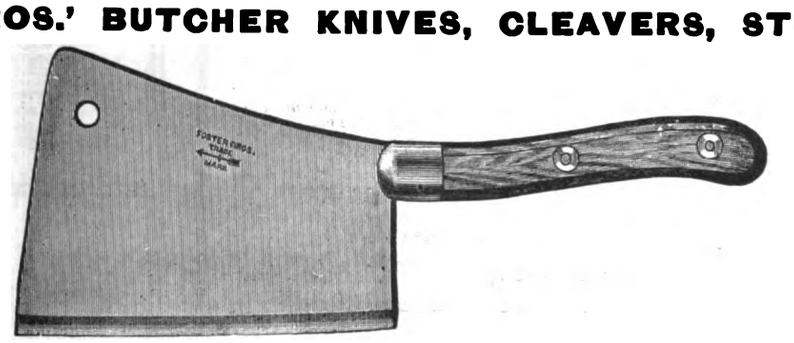
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chatillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

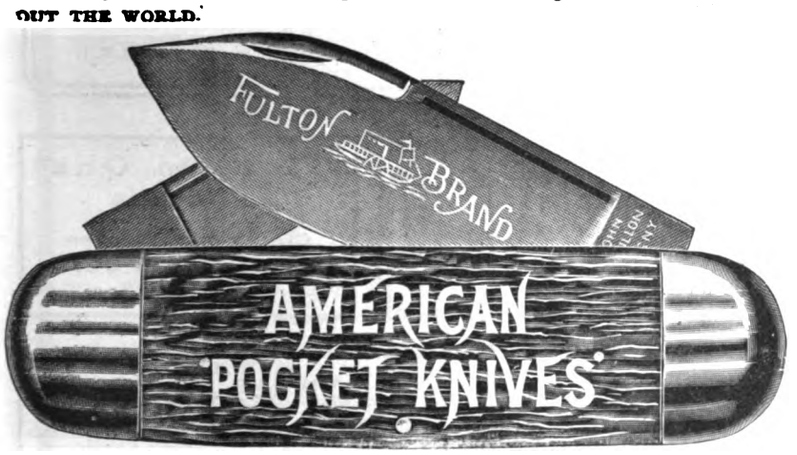


has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

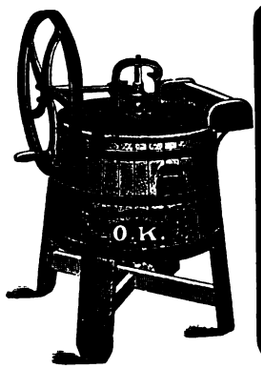
FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.



These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.



Finest Quality American Pocket Cutlery in large variety. Knives that are good sellers and will give satisfaction to the user.

ESTABLISHED 1835

JOHN CHATILLON & SONS, New York City.

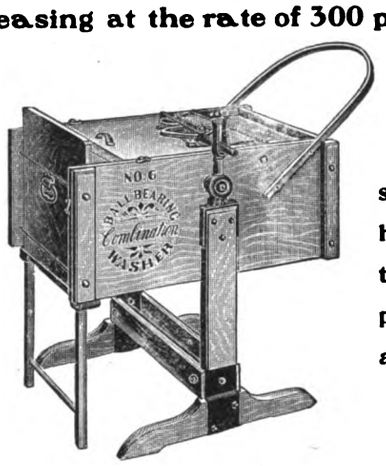
DON'T WAIT

until some other Hardware Merchant is selling all the O. K. Washing Machines in your vicinity.

Take up their sale now,—before some of your competitors,—and you'll have the prestige of being first to sell the O. K. Washing Machine.

The O. K. Washers are a little better, and a little different from other Washing Machines.



Our little booklet tells all about them. Free on request.

H. F. BRAMMER MFG. CO., Davenport, Iowa

1,500,000

WAYNE WASHERS sold up to the present time And increasing at the rate of 300 per day.

We make 23 different styles of washing machines, and dealers can supply their entire wants from our factory.

A complete stock carried on hand at all times. Ask for prices and catalogue.

This machine combines the reciprocal pin wheel motion, with the oscillitating movement of the whole suds box, by means of which we are enabled to double the capacity of the machine and wash clothes cleaner, quicker and with less labor than any other machine now on the market.

This machine is finished in the natural finish, or with mahogany stain finish, if so desired, with the outside iron parts finished in gold or silver bronze; the two finishes combined making it the most beautiful machine on the market. This machine is fitted with our new galvanized iron pin wheel, or with wood pin wheel, if so desired. The bearing of the machine works on sixteen steel rollers, which lightens the efforts of the person washing, one-half.

A Long (K)Night In HARDWARE

¶ For years retail hardware men have been groping in the dark, looking for some efficient way to increase their business—some of them have found it!

Warren's Patent Sectional Glass Front Shelving

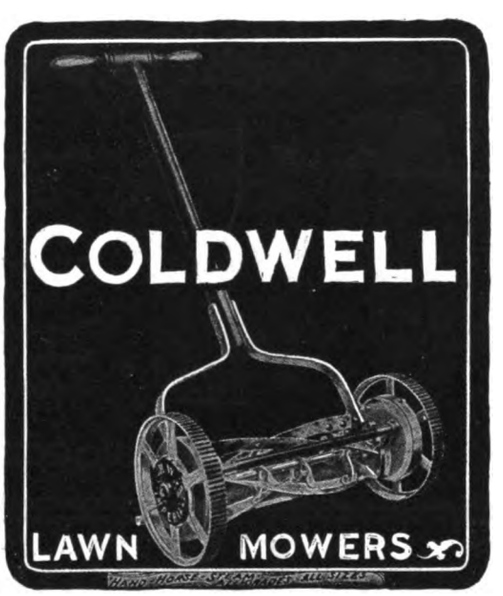
is designed and manufactured by a Hardware Man for Hardware Men.

¶ You can keep a line of samples of your entire stock on exhibition at all times.

¶ It preserves each article in the same attractive newness that it comes from the factory, prevents *dust, rust, finger-marks and dirt.*

¶ It enables you to sell goods to a *German*, a *Scandinavian* or *any* other foreigner who, even though he cannot speak English can *point* to what he wants.

¶ It improves the appearance of your store *100 per cent;* enables your salesmen to spend their time *selling* goods instead of *hunting* for them, and will *pay for itself in one year.*



¶ Send dimensions of your store and let us supply you—FREE—with a color plate made to scale showing how *your* store will look when equipped with The Best Shelving in the world for your purpose.

¶ Remember the shelving is made on the unit plan—if you want to experiment—don't wish a complete outfit now—you can buy one—two—three stacks or sections—the rest will follow as your satisfaction increases.

WE MAKE CLERKS ACCURATE

Each clerk's sales are added separately on this counter. Separate counters under this hood give separate totals of charge sales, money received on account and money paid.

A new and complete system for credit sales, money received on account and money paid out.

This counter shows how many customers each clerk waited on during day.

If there is a mistake of fifty cents in this drawer, or a counterfeit coin or bill, you know that "D" clerk made the mistake.

This counter, under lock, tells proprietor any minute how business is running.

Under lock is private record of each sale and clerk who figures in each transaction

A receipt printed automatically goes to every customer. Shows amount, kind and clerk who made transaction. This receipt enforces proper record of every cent taken in by each clerk.

This counter shows total number of customers waited on during the day.

This drawer belongs to clerk "E." Each clerk has his own individual cash-drawer.

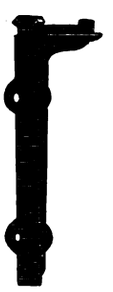
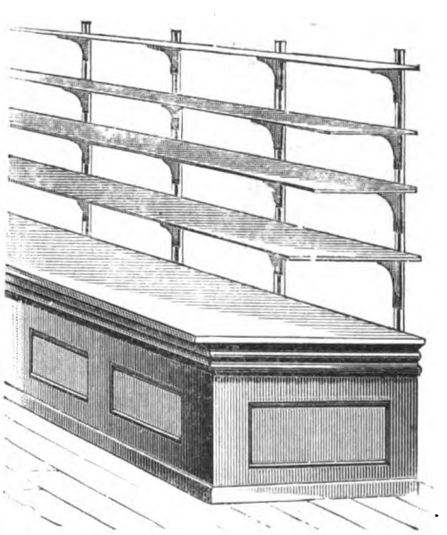
DO YOU NEED MORE SHELF ROOM?



You can get it without increasing the size of your store by installing

BAINES'

ADJUSTABLE SHELF BRACKETS



The illustrations on this page show how the use of these brackets increase shelf space by giving an absolutely clear shelf from end to end. There are no uprights or braces of any kind to get in your way and to take up space. The cuts at the upper part of this page show the construction of the brackets and the ease with which they are attached to the wall.

Will Hold any Weight that Can be Placed upon them

That's a strong statement but its truth can be demonstrated easily.

We Make Fixed Brackets

also, for stores and dwellings. They're easy sellers. Practically tell their own story, especially if you are using them on your own shelves.

Our catalogue "H" especially for Hardwaremen tells how to estimate the number of brackets required, and still more facts concerning the advantages of using them. Ask for it.

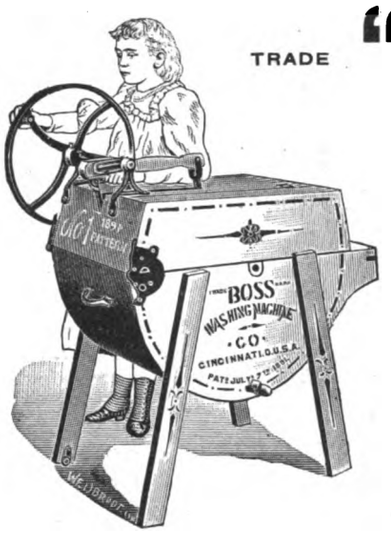
DON'T MOVE

You can increase the size of your store without increasing your rent by installing one or more

Milbradt Rolling Step Laddors

They make it easy to utilize the space between the top shelf and the ceiling for extra shelvings and boxings.

Milbradt Ladders are made to order from measurements covering the conditions peculiar to each store.



They combine great strength, easy and noiseless operation and handsome finish at a cost that is as low as the price for ready made ladders.

Style No. 4 (shown in outline), a ladder for use on shelving with very narrow or no base. The swinging arms hold the ladder in the position most convenient for climbing. These arms may be swung up allowing the ladder to hang close to the shelves when not in use. Rubber rollers are attached to these arms and run against the base. This is a most convenient ladder for use in narrow aisles or in stock and store rooms.

Our latest catalog illustrates 14 other standard styles adapted to every form of shelving. It will be mailed on request.

A Square Deal

— FOR —

Square Dealers

Square dealers, we take it, are those who try to give their customers goods that are "square" — honest all through. For forty years we have been giving all, dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public, of all the world, about their merits. Square Dealers *distribute* them — they are already *sold.* Just ahead is the big demand for

"ENTERPRISE"

Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.

Increase your sale of "Enterprise" Meat and Food Choppers by using our new booklet: "The Cook, Her Critic and—". We will send you a supply of these on request.

Mr. Jobber

Our house wants you to take up the sale of our Scythestone, Oilstone and Razor Hone Selling Assortments.

¶ These assortments contain guaranteed goods, packed conveniently in attractive display cabinets.

¶ Each cabinet is packed in a strong individual shipping box.

¶ You don't have to bother with unpacking a shipment of sharpening stones from the house, and then repack in small orders for the trade, with the resultant loss sustained by breakage of stones and the loss of your most valuable asset-time. Just change the address on the box and re-ship. That's all! You have saved time and money. Good wide-awake salesmen can sell enough of these assortments to reduce your selling expense to a minimum.

There's Dollars and Cents in this for you Mr. Jobber!

¶ We have three Oilstone, Two Scythestone and Two Razor Hone Assortments to offer. Either one will leave you a handsome margin for handling them. For further particulars write to

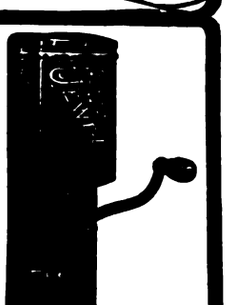
GET BUSY

That is the one secret of success in the Hardware trade.
The rapid sales and quick turning over of capital that

A Line of Arcade Goods

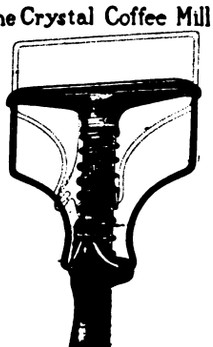
will produce is a revelation to Hardware dealers, and there is a reason for it. Consumers know the excellent quality that the name Arcade signifies. They know that it stands for the highest satisfaction and greatest efficiency that their money can buy. It is this knowledge that makes them demand Arcade Goods when they are in need of any of the 300 articles we manufacture.

To prove their unquestionable merit to any doubting dealer we will send a sample of any article desired.



We show on this page four articles that are money-makers for the dealer.

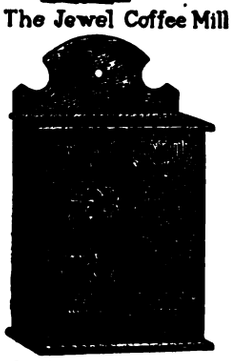
The Crystal Coffee Mill



THE CRYSTAL COFFEE MILL with glass hopper and tumbler. This is the most perfect mill made and with it the most discriminating customers may be interested. Its superior advantages are appreciated on sight.

THE JEWEL COFFEE MILL with glass canister holding one pound of coffee. This is a companion of the Crystal, but sells at a lower price. A liberal dose of these two mills will prove a tonic to your coffee mill trade.

The Jewel Coffee Mill



You can satisfy every requirement of your trade with one of the sixty different styles of wood, glass and metal mills which we manufacture.

The Gem Mop Head.

THE FAMOUS GEM is known to housekeepers everywhere as the one dependable mop head. It is made of the best steel and equipped with the latest improved spring adjustment. It is a most durable, saleable and profitable article.

THE RIGHT SPACE SPICE CABINET is made of hard wood in natural finish. It is strongly built to withstand the roughest usage. Each compartment is labeled and fitted with iron pulls. The general effect is one that appeals to the careful housewife.

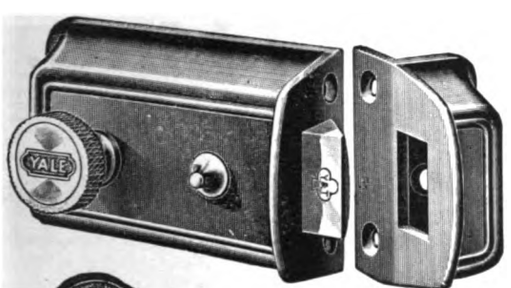
Yale Locks and Builders' Hardware are produced in many grades and finishes to meet all conditions, tastes and pocketbooks.



Our No. 18 Catalogue, just issued, will be sent to Dealers on request.

Yale & Towne Padlocks range in retail price from 10c. to $2.50 each. No. 850 Padlock, here illustrated, is operated by the Yale Paracentric Key, and may be master-keyed in connection with Front Door or other Yale Cylinder Locks.

The complete line of Yale & Towne Padlocks is contained in a Catalogue of 42 pages, which will be sent on request.

No. 850 Padlock

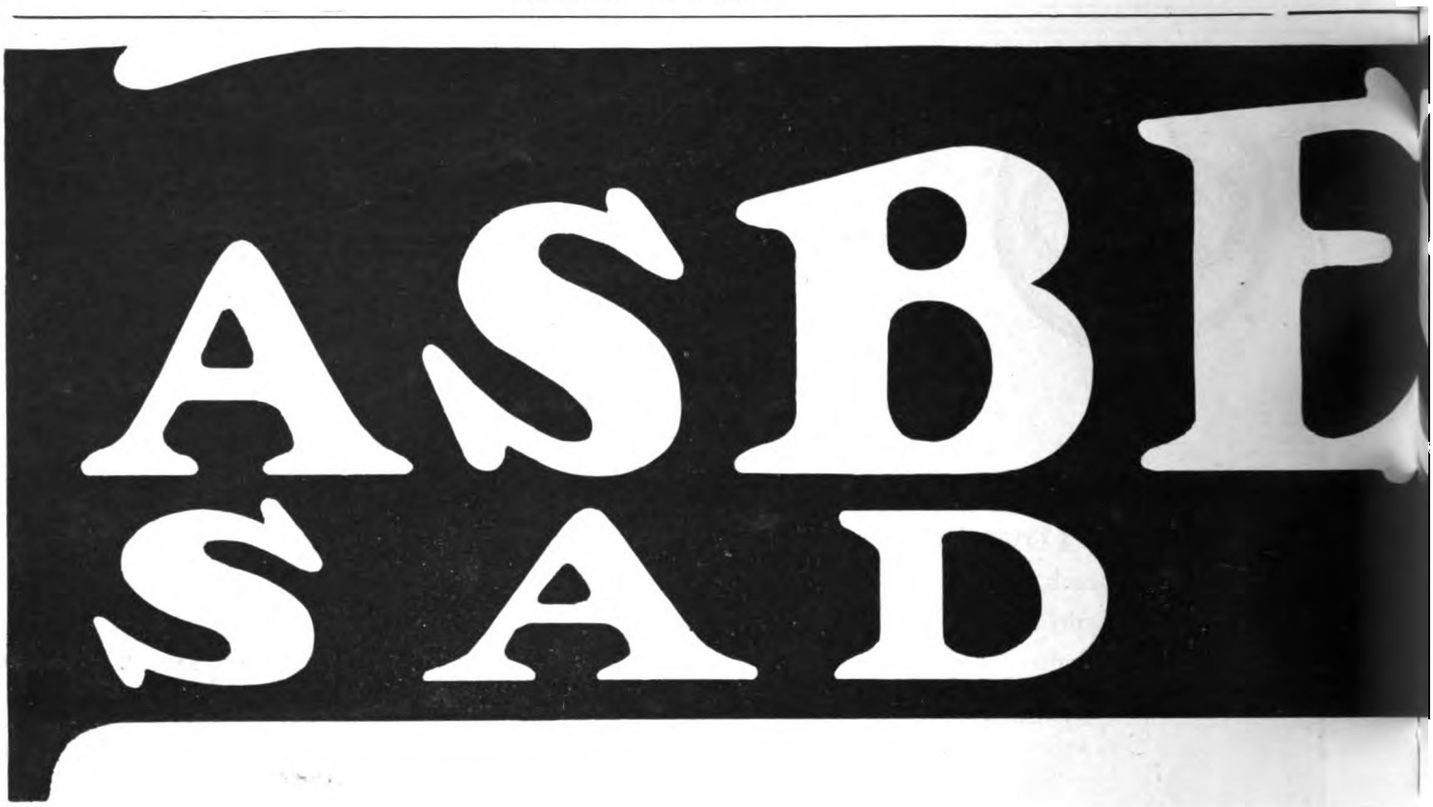
No. 42 Night Latch

Yale & Towne Rim Night Latches range in retail price from *25c.* to *$4.00* each. No. 42 Latch, here illustrated, is the leading Night Latch of the world. In its latest form, with Paracentric Key, it easily outranks all other night latches in security as well as popularity.

The complete line of Yale & Towne Night Latches is contained in a catalogue of 24 pages, which will be sent on request.

Yale & Towne Blount Door Checks were the original Checks of the liquid type, which is now conceded to be the only successful kind. They are produced in six sizes to meet all conditions.

A Catalogue of 12 pages will be sent on request.



TO DEALERS who carry our products we furnish small catalogues, booklets, folders and other printed matter in quantity, imprinted with name and address of dealer on front cover; our own name and address does not appear. We also furnish other help to assist in pushing the sale of our product.

Write us for sample folders and further information.

START THE BALL A-ROLLING.

"Die tie iss cast. I haf burnt mine britches behind me!"
That is what a German retailer said when he engaged space for his first advertisement.
The modern way of doing business demands *a departure from ancient methods.*
There are two words which mean SUCCESS to the man who has something to sell. These words are

QUALITY and PUBLICITY.

Be sure that what you wish to sell will satisfy your customer—then advertise, *advertise,* ADVERTISE.

$1,000.00 IN CASH PRIZES.

To stimulate your interest in advertising ASBESTOS SAD IRONS, we propose to give $1,000.00 in cash prizes for the best *advertisements* and *window displays* featuring ASBESTOS SAD IRONS.

Will it not be worth your while to enter our Advertising and Window Display Contests—*just to start the ball a-rolling?* A little extra effort at this time will result in *continued demand* for ASBESTOS SAD IRONS. Every sale you make by reason of your advertising or window display will be the nucleus for further sales, for we know that women who use ASBESTOS SAD IRONS recommend them to other women.

THAT'S HOW QUALITY SHOUTS IN UNISON WITH PUBLICITY.

If you do not know the terms of our Advertising and Window Display Contests, mail us the adjoining coupon and we will send full particulars at once.

Every woman is our prospective customer. Every woman to whom you show ASBESTOS SAD IRONS is your probable customer. She realizes their modern character instantly, knows they represent a radical departure from old-time methods and you can't keep her from buying.

We intend to give every woman an opportunity to purchase ASBESTOS SAD IRONS.
You can sell ASBESTOS SAD IRONS TO every woman in your community.
Will you do it?

STOS IRONS

AN IRON FOR EVERY PURPOSE

ASBESTOS SAD IRONS are made in various shapes and weights and packed in various combinations to suit the particular needs of every woman.

While each style has an individuality of its own, all styles of ASBESTOS SAD IRONS possess those peculiar features for which the name "ASBESTOS" stands.

There is the *hood,* with its *asbestos lining* and *heat reservoir,* which insures always *a cool, comfortable handle* and *a heat-retaining iron.* There is the *solid core,* the *automatic steel lock,* the perfect polish, the handsome nickel plate.

It is "ASBESTOS QUALITY" which has caused the phenomenal demand for ASBESTOS SAD IRONS. We desire to have every user of ASBESTOS SAD IRONS a *satisfied user.* That is why we give such careful attention to each little detail in the construction of ASBESTOS SAD IRONS. That is the reason why we guarantee ASBESTOS SAD IRONS to give satisfaction.

Perhaps you do not know enough about ASBESTOS SAD IRONS to place an order at the present time. Let us send you our booklet with other descriptive literature, and give you the names of jobbers who carry our goods.

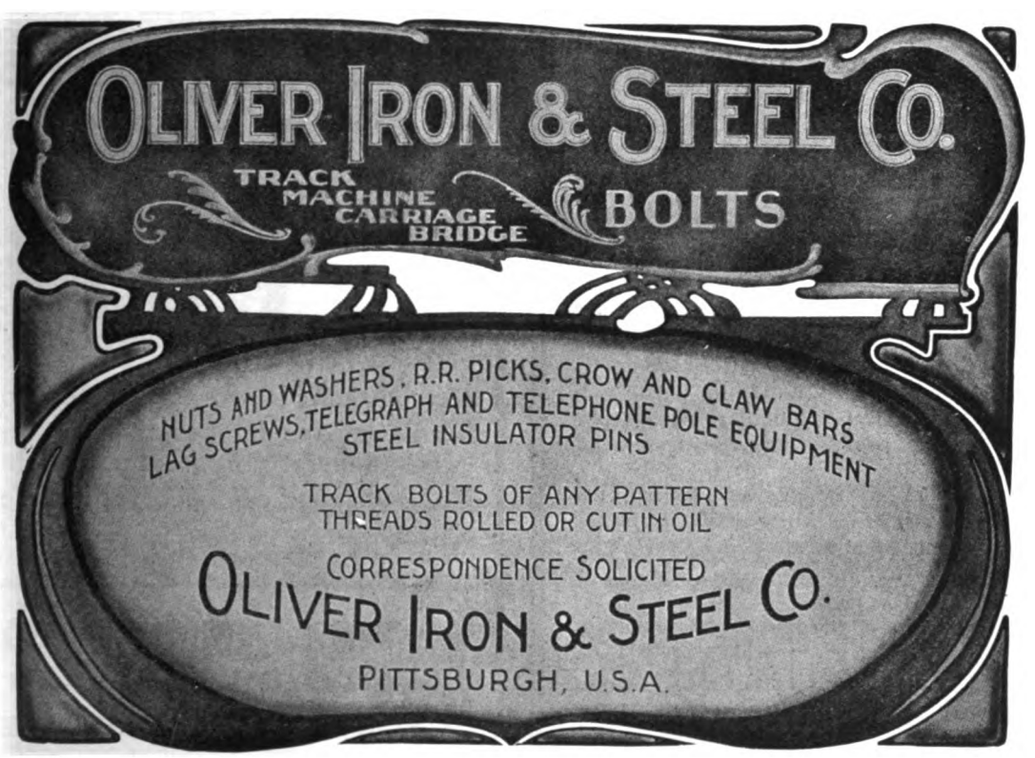
DON'T STAND IN YOUR OWN LIGHT

You may persuade a man he doesn't know what kind of a gun he wants; that he doesn't know one make of golf sticks from another; maybe that he doesn't know a polo pony from a cart horse, but—

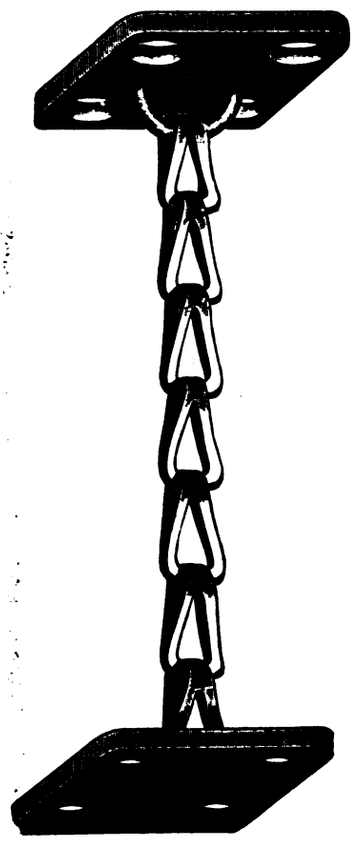
If he comes into your store for a "Bristol" Steel Fishing Rod, you can gamble that you either sell him a "Bristol" Rod or none at all.

We have made our steel rods famous. Every angler in the country knows them. Many already own them; more intend to purchase them this season. We are receiving hundreds of inquiries every day.



We are offering dealers (through the jobbers) a discount that enables them to sell "Bristol" Rods at prices which allow a handsome margin of profit, and we will furnish without charge fishing illustrations and cuts of our goods for newspaper advertising, also catalogues, circulars and a handsome sign for your store.

Better order an assortment of these rods at once. If your jobber doesn't handle fishing tackle, write to us.



Ask for Catalog.

Our Rods are the *original* Steel Fishing Rods. We have been making them for over fifteen years. Look for our name and trade mark "Bristol" on every reel seat. They are absolutely guaranteed to be free from defects in material or workmanship.

"SIMILAR"

A CERTAIN tool manufacturing company adorns the pages of the catalogues it gives to hardware buyers with a rubber stamp impression like this:

Similar to Starrett's No.....

That Starrett Tools are the standard is a fact which we have for some time, and with strenuousness and persistency, tried to impress upon mechanics and the trade, and we have been to some expense and a good deal of labor to accomplish this purpose. It is therefore gratifying to find a competitor backing up our advertising with such an unqualified endorsement. We deeply appreciate the compliment.

It is doubtless unnecessary to suggest that live hardware dealers will still prefer Starrett Tools to any whose highest claim is that they are "similar."

HARDWARE

FRANKLIN SPECIALTY CO., Reading, Pa., have added another engine of 60 horse power to their plant and have in other respects more than doubled their productive capacity. They are manufacturers of high-grade nickel plated Hardware and household specialties and possess the finest facilities for job plating in Nickel, Silver, Gold, Copper, Brass, Bronze and all the oxydizing finishes in their branch of the business.

THE SMITH IMPROVED LOCK NUT CO., Rockford, Ill., mention of whose incorporation was recently made, will run day and night shifts at their new factory. The new lock nut of which Mr. Smith is the inventor, shown by us recently in our illustrated New Goods, is being used on the Chicago, Milwaukee & St. Paul Railroad. A portion of the nut is a spring which takes the jar from the threads, thus preventing it from jarring loose from the bolt.

HARDWARE FOR MANCHURIA.

Arnold, Karberg & Co., 21-24 State street, New York, advise us that they have opened a branch house at Newchwang, Manchuria. They would be pleased to receive samples and prices of Hardware suited to that especial market.

BOMMER'S SPRING HINGES.

Now that the inclemency of the weather will soon make it necessary to keep our doors closed, and we shall all be studying comfort in the near future, it behooves the enterprising Hardware man to be astir and look over his stock of Bommer's Spring Hinges, so as to sort up sizes that may be wanting to make it complete. For there are few things known that so thoroughly conduce to comfort-creating conditions as Bommer's Spring Hinges.

STEEL CORPORATION'S HEAVY BUSINESS.

The largest amount of business on record is shown by the report of the United States Steel Corporation for the third quarter of 1905, made public this week. The volume of unfilled orders is given as 5,865,377 tons, an increase of about 1,000,000 tons as compared with July 1, and almost 300,000 tons more than last March when the high record was set. The net earnings for the quarter, $31,240,582, were about what had been predicted, and exceeded the earnings of the third quarter of 1904 by $12,466,650. The surplus for the quarter was $10,672,613. The regular quarterly dividend of 1¾ per cent. on the preferred stock was declared, payable November 30.

A GOOD LITTLE SUGGESTION.

The neat little Japanese have a shoe closet, which some American manufacturer will some day copy. It consists of a box, in which are two or three shelves for shoes, a place for storm shoes, a hook for lacings and places for other articles necessary to footwear. If some American firm should place on the market a little novelty of this character, it would doubtless prove a good seller. It would take especially among college boys and girls, some of whom already use a home-made shoe box. The Japanese, by the way, are very neat. They remove their shoes whenever they enter a house, and they keep their shoes neatly brushed and arranged in an orderly manner in their shoe closets.

INSUFFICIENT POSTAGE.

Carelessness of correspondents in attaching the required postage stamps to foreign letters causes annoyance and expense to the parties addressed. Consul Brittain directs attention to this in the following.

There seems to be a greater number of letters coming from America with insufficient postage than at any previous time. Numerous persons have recently called at the consulate showing letters on which they have been obliged to pay 5, 10, 15, and in some instances 20 cents postage. These matters appear small, but there are few things that so irritate a business man as being obliged to pay penalty postage on letters and printed circulars. Many of the business houses of America forward packages of circulars in sealed envelopes requiring letter postage which could be sent as printed matter.

'PHONE MOUTHPIECE ABOLISHED.

Consul Mahin, of Nottingham, reports that the suggested transmission of disease by telephone mouthpeices has led the British General Electric Company to devise an instrument in which all danger is avoided by simply abolishing the mouthpiece. The receiving and transmitting apparatus is combined in a small metal case, shaped like a watch, which is held continuously to the ear both in speaking and in listening, the transmitting microphone being made so sensitive that it becomes unnecessary to concentrate the sound waves on it by the aid of any mouthpiece such as is ordinarily used. Mounted on a handle, with a speaking key, the new arrangement is exactly similar to the common combined receiver and transmitter, except that there is no mouthpiece, and the speaker, as it were, addresses himself to the world at large, instead of talking into a trumpet shaped orifice.

NEW YORK CREDIT MEN'S ASSOCIATION.

At the recent annual meeting of the New York Credit Men's Association, headquarters 320 Broadway, New York, the following officers and Executive Committee were elected for the ensuing year:

R. P. MESSITER	Minot, Hooper & Co.
W. E. PURDY	Chase National Bank.
OWEN SHEPHERD	International Paper Co.

AVERAGES ABOVE THE AVERAGE.

At Kent, Ohio, October 12th, J. A. Smith, of Massillon, Ohio, won high average, and J. L. Schiltz, of New Berlin, Ohio, tied F. I. Bean, of Ravenna, for second average. All of these gentlemen used Peters' factory loaded shells.

At Pen Argyl, Pa., October 2-3, the high professional average was won by Neaf Apgar, and high amateur average by E. F. Markley, both using Peters' Ideal factory loads.

At St. Joseph, Mo., October 10-11, E. W. Arnold was second high amateur, and Wm. Veach third amateur, both using Peters' shells. Arnold also won the L. C. Smith trophy, breaking 25 straight in the match, and 49 out of 50 on the shoot-off. Messrs. Veach and Arnold shot 100 targets for the Elliott Handicap cup, resulting in a victory for Mr. Veach with 91 out of 100.

At Eaton, Ohio, October 18, first general average was won by W. R. Clark; score, 195 out of 200. Mr. Clark also made one run of 181 straight, using Peters' factory loaded Ideal shells. At this tournament L. H. Reid was second high in the general averages, breaking 189 out of 200, also using Ideals.

The Lodi, Ohio, Gun Club gave a very successful one-day tournament on October 18th, with an attendance of about twenty-five shooters. J. A. Smith, of Massillon, Ohio, won high amateur average, breaking 138 out of 150, using Peters' factory loaded Ideal shells.

M. E. Atchison won high general average at the Waco, Texas, tournament, October 12-13, breaking 353 out of 400. This score is especially noteworthy when it is recalled that Mr. Atchison shot from 19 yards throughout the programme and that a very high wind was blowing continuously. That, however, did not make much difference, for he used Peters' shells.

At Santa Paula, Cal., October 11, J. E. Vaughan, Peters' Cartridge Company representative in Southern California, won high average with 212 out of 225. At Orange, Cal., the next day Mr. Vaughan was also high with 93%.

At Moreland, Ind., October 21, L. H. Reid, shooting Peters' Ideal shells, won high average, scoring 99 out of 100. Mr. Reid is in such good form this year that he rarely fails to shoot somewhere above 94%.

At the tournament given by the Elyria, Ohio Gun Club, October 24, J. W. McMeans tied for high average, using Peters' shells. D. D. Gross won third average with his reliable factory loads of Peters' make.

NOVEMBER 10, 1905

Editorial Trade Review

Prosperous conditions, continuing in the promise of colder weather, are regarded as favorable for their prevalence everywhere. Throughout the West the influence is one, that for the benefit of a regular trade is desired for the movement of goods that have been ordered for just such weather, or even colder. The shipment of these goods is considered seasonable, and the business is flowing through regular channels, when the weather gives us the first indication that Winter is, or may be, expected at once.

The ruling prices of raw materials continue higher and heavy Hardware begins to show the effect of the stiffening of market conditions. The trades are so well occupied with work ahead that the demands for improved tools continues good and many lines are in general request.

Prices of wire cloth and poultry netting have been announced for next season, and while wire cloth does not suffer from the announcement, poultry netting is higher on account of the amount of stock embodied in its construction, and the condition of the market for wire affecting it. The change was not unexpected and the manufacturers were remarkably shrewd in leaving it to the end of the season when the light stocks in the hands of the dealer were to be expected. It is well that the trade places orders early for these goods, and receives the assurance of an early shipment in the Spring by so doing.

Builders' Hardware is still in urgent request, being greater as the lateness of the season causes a demand which will carry the builders through the Winter, in uninterrupted employment. In finishing up the houses on which they have been working a demand is created for inside furnishing that is received with a great deal of satisfaction by the dealers generally; and the fine Fall weather we have had seemingly prolonged for the builders' benefit, has helped materially to a successful issue. The delays in filling orders are less frequent than usual and the business may be said to be progressing favorably.

Transportation facilities are complained of as interfering greatly with the delivery of material to the manufacturer, the worst condition that is criticized. It is expected that higher prices will prevail after January 1, when a reorganization of quotations will take place for 1906. Such goods as Barn Door Hangers and Rail, Strap Hinges and Butts, Shovels and Spades, Steel Goods, etc., prices on these goods have been too low, and the trade looks forward to a readjustment that will average them up somewhat.

There has been a very heavy stove trade of all kinds all over the country; the demand has not always been met by prompt shipment, but the requirements were full and the deliveries encouraging. The prosperity of the farmer is always evidenced in the improvement of kitchen and parlor conveniences as in the larger fields for the increase of his industrial wealth. So the trade may well prepare for the exposition of his wants in this respect.

Trade in Husking Gloves and Hooks on account of the far reaching territory of corn production has been remarkably good.

Those dealers handling Paints have been blessed with an excellent trade, and in analogous lines have enjoyed a well-grounded business of expanding proportions. The handling of Paints makes necessary the sale of so many other articles in connection with it, that a very profitable assortment of goods is carried in stock, and the sale of such goods duly appreciated by the community in which the dealer operates.

On the whole, the October business has proved to reach proportions even larger than were found in September, and in every other respect equally as satisfactory in the way of profits. The trade generally has been buying for their wants only, having experienced no speculative feeling whatever. The Hardware line has become with its numerous additions, so expanded, that an average stock of goods is regarded as sufficient for their requirements, leaving no room for heaping up stock in response to a view of speculative assumption. The goods needed have caused no unsettled conditions, and the increasing business developed has consequently been of the most satisfactory character, producing a spirit of general confidence and acting in the nature of a stimulant to enterprise and industry.

The Conventions held in Washington, D. C., this week, which were the Eleventh Annual Convention of the National Hardware Association and the Ninth Convention of the American Hardware Manufacturers' Association, were the most successful gatherings in the history of each. The largest number of members and visitors were present, many with ladies accompanying them, and the greatest interest was manifested in the speeches and proceedings. Everywhere was noticed prevailing the utmost good feeling and complete fellowship by those participating, and the highly gratifying conditions which the members reported from every section of our vast country, produced the happiest feeling of optimism prevailing that made the proceedings possess an unusual charm for everybody. The Catalogue House question was handled effectively by the Joint Catalogue House Committee of the National Hardware Association and the National Retail Hardware Association who were represented on the Committee. We give a good portion of our space to the Report of the proceedings which will be found on other pages in this issue.

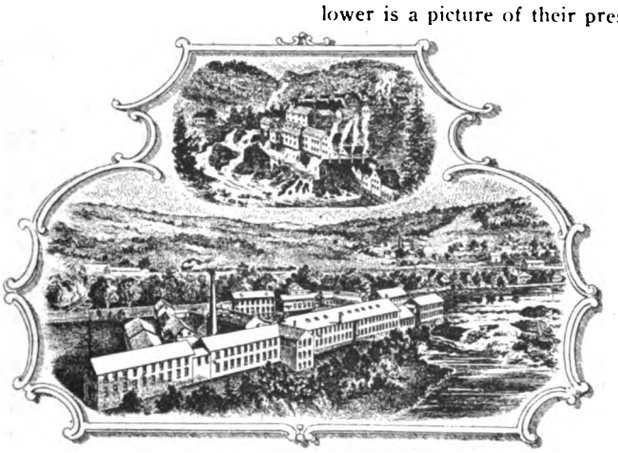
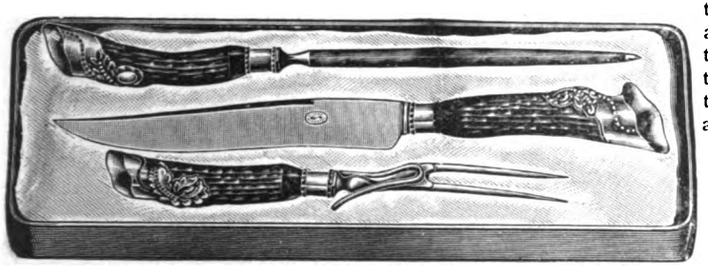
PROFIT MAKING LINES



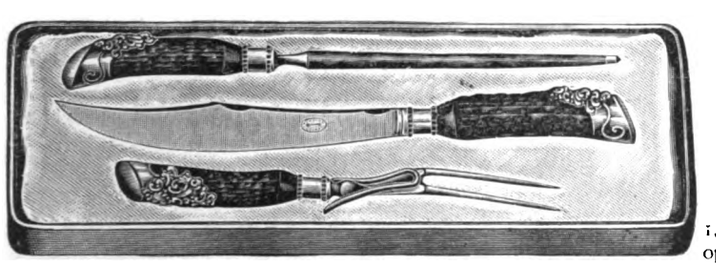
LAMSON & GOODNOW'S CUTLERY.

It is an interesting fact that the history and development of edge tools and cutlery from pre-historic times to the present, is intimately bound up with the history and development of man during the same period.



Saw-edged and crescent-shaped knives, flint flake knives, etc., implements of the Stone Age, were pre-historic man's first cutlery, and, although they appear to us to-day as clumsy, pre-historic man's domestic and social happiness was incomplete without them.

One needs only to visit the museums in our larger cities to find how well, in all ages, the skilful artificer combined the ornamental with the useful, not only in small weapons, but in cutlery as well.



Each historic period has its own styles and ornamentation. Each successive period vied with its predecessor. Creative fancy worked overtime, and, as a result, would produce cutlery which was indeed "a thing of beauty and a joy forever."

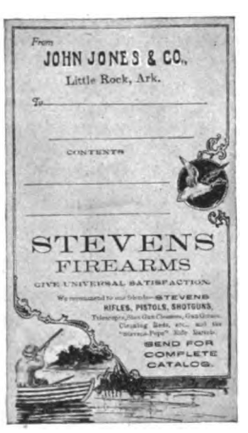
LAMSON & GOODNOW'S PLANT.

In this country, the first cutlery was imported from England. A few specimens are preserved in Pilgrim Hall, Plymouth, Mass. So far as we know, the second oldest concern in the

United States, engaged in the manufacture of cutlery, was the Lamson & Goodlow Mfg. Co., established in 1837.

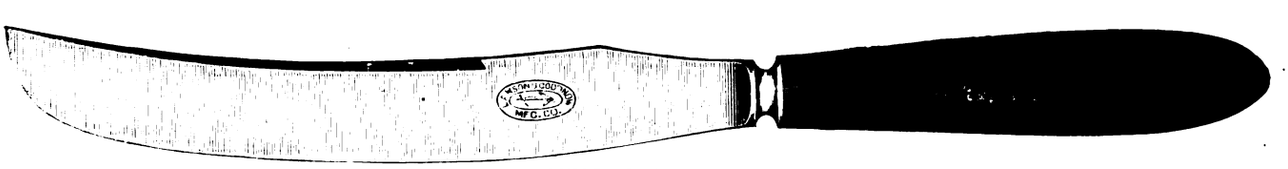
Scythe Snathes were first manufactured by its old plant. Soon after J. E. Goodnow began the manufacture of Butcher Knives. In 1850 Ebenezer Lamson became his partner. Their goods were of such superior quality that the demand for them constantly increased and they were compelled from time to time to increase the size of their plant as well as their facilities. The upper one in the accompanying picture shows their old plant. The lower is a picture of their present plant, in which the most complete line of fine table cutlery and knives for almost every purpose are being manufactured.

Their line of Stag Handle Carvers is the finest on the market to-day.



Throughout this country L. & G. Carvers and Carving Sets have carved for themselves an enduring reputation for quality and durability.

Their goods are being sold extensively in all parts of the world.



Because of its long established reputation for excellence and largeness of line, L. & G. Cutlery ought to be a "Profit Making Line" for Hardware dealers who are not already handling it.

STEVENS' PART ENVELOPE.

The J. Stevens Arms & Tool Co., Chicopee Falls, Mass., assist the Trade in facilitating the sale of the "Stevens" product with advertising matter in the way of booklets, circulars, electrotypes, etc. A valuable adjunct to their advertising campaign is the Stevens Part Envelope. This practical advertising accessory they furnish free to dealers, imprinted with their firm name and address. These envelopes are issued in lots of 250, 500 and 1,000. They consist of a durable, good stock of manila paper, open at the upper end. The flaps are gummed, thus permitting their being sealed. These part envelopes are very useful for sending out small parts, etc. We illustrate the salient features of this part envelope herewith. They will be sent anywhere on application, the dealer defraying the express or freight charges on same. A judicious distribution of this advertising matter invariably redounds to the interest of the retailer, and is a permanent advertisement for him. Upon receipt of advice, designating quantity wanted and shipping directions, the company will take pleasure in forwarding any number desired.

STEVENS' PART ENVELOPE.

STIMULATING A CUSTOMER'S WANTS.

Before arranging for his display at the county fairs the Hardware dealer in agricultural districts would do well to take a day off and study existing conditions at close range. A day's drive through the country with especial reference to the location of his own patrons will not only bring up many suggestions regarding opportunities for individual sales but is almost sure to reveal some point at which the everchanging conditions of a growing community have produced or are about to produce a good general demand for some particular line of goods that is within the Hardware dealer's legitimate territory.

To illustrate my meaning, a few years ago while on just such a trip an acquaintance of the writer noticed that most of the old rail fences common to the farms of his community had been repaired and patched up to about the limit while a glance at the scanty woodlands told him that the rail timber had become too scarce to ever replace them properly. Here was his opportunity, and he made good use of it. Returning home, he first made a study of the various fences on the market until satisfied that he had discovered one of the best for his particular location; then he began to talk fence through his advertisements and, better still,, showed up the merits of his fences at every agricultural Fair and similar public gatherings available. The plum was ripe and the harvest satisfactory.

In the same manner another man discovered that a fad was springing up among the farmers of his community for a particular line of root crops where hay had been the previous staple. Instantly he turned his attention to introducing lines of machinery for the work that, in its previously limited application had been done almost wholly by hand.

Both of these instances probably are among the opportunities that have been but are no more in most communities; but so long as new machinery is invented, new conditions must present themselves there is always a good chance for an alert man by coming into occasional contact with his customers at their own homes to anticipate a harvest that by a little hand picking may be very valuable to him where to await nature's own course he might only get wind-falls. G. B. B.

NUMBERING RURAL FREE DELIVERY MAIL BOXES.

The article in the October Bulletin of the National Retail Hardware Association, on numbering rural boxes, has been printed and enclosed in the following communication, which Secretary Carter has forwarded to every member of the Southern Hardware Jobbers' Association:

"Your attention has already been called to the evils which will develop in case the proposed efforts upon the part of the Catalogue Houses and their cohorts to secure the authorization upon the part of the Post Office Department for the numbering of Rural Free Delivery Mail Boxes are successful; however, the importance of this proposition is so great, that we again desire to call your attention to this matter and to suggest ways and means whereby additional opposition may be directed against the favorable evidence that the Catalogue Houses' interests are accumulating.

"We first ask your careful consideration of the pamphlet enclosed herewith, bearing on this subject, prepared and publisned in the October Bulletin of the National Retail Hardware Association.

"Secondly, we request that you furnish each of your salesmen with enough copies of this little pamphlet to give one to each of his customers.

"Thirdly, please impress upon your salesmen—by a strong letter—the great injury that would result to the retailers, the jobbers, as well as to himself, in case the Catalogue Houses were enabled to secure the numbering of the rural delivery boxes as they are now trying to do. It would unquestionably tend to a still greater centralization of business among the large mail order houses, to the detriment of both jobbers and retailers. The salesmen should know that the more the business of the country is transacted through the mails, the less the field of operation and usefulness of the traveling man. The continued progress and development of the mail order houses, surely and forcibly rings the death knell of the traveling salesmen.

"We also suggest that you also present this matter to your customers direct at every opportunity. We can accomplish wonders if the trade will co-operate and support our efforts. Will you do your share? If so, kindly carry out the suggestions given above."

COMMITTEE ON STANDARD SIZE LOOSE LEAF CATALOGUE.

The Committee of the Southern Hardware Jobbers' Association, consisting of J. D. Moore, Charles H. Ireland and C. B. Carter, were appointed to report on the Standard Size Loose Leaf Catalogue. After giving the subject as much consideration as was possible they respectfully report as follows:

"After a very careful canvass of our membership, both as to the size of catalogues and loose leaf binders they are now using and their ideas and wishes as to something more desirable, if any, we recommend the adoption of the following size sheet for the regular printed bound catalogues: 8¼x11 inches. For use in Loose Leaf Binders, we recommend the adoption of sheet 9½x11. Ordinarily the printing space on either sheet will be the same, the loose leaf sheet being wider to permit of its being inserted in the loose leaf binders, the necessary margin for binding being greater than in the regular bound books. Printing space or type form should not be over 6¾x9¼ inches on either bound catalogues or on sheets for loose leaf binders.

"Your committee does not recommend the adoption of any particular style or make loose leaf binder; however, for your information would suggest The 'Tengwall' Binder as one possessing excellent merits. Price, $3.90 each in one dozen lots. Address The Tengwall Co., Chicago, Ill."

This information was sent to each of the members of the Southern Hardware Jobbers' Association by Secretary C. B. Carter.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED OCTOBER 23, 1905.

391,438. ADJUSTABLE BRACKET. W. Van Horn, Piqua, Ohio.
391,532. WRENCH. J. G. Hoffman, Ste. Genevieve, Mo.
391,543. WASHING MACHINE. J. L. Martin, Leo, Ind.
391,588. WRENCH. C. S. DeWitt, Lockport, Ill.
391,631. CASTER. N. C. Merriam, Meriden, Conn.
391,682. DOOR CHECK. J. M. Brohard, Clarksburg, W. Va.
391,731. DOOR SPRING. F. L. Becker, New York, N. Y.

PATENTS ISSUED OCTOBER 24, 1905.

802,401. DRILLING BIT SOCKET. J. S. Lino, Pittsburg, Kan.
802,402. DIMENSION GAUGE. F. Martin, Newlonton, W. Va.
802,500. WINDOW SCREEN. De Villo C. Foote, Cleveland, Ohio
802,501. COMBINATION LOCK. R. C. Fulton, New York, N. Y.
802,522. CARPENTER'S JACK. P. J. McCulley, Annona, Tex.
802,528. SAW SHARPENING DEVICE. J. H. Seek, Chicago, Ill.
802,565. WINDOW SHADE HOLDER. J. R. Hamer, New Bedford, Mass.
802,603. WINDOW SCREEN. D. Z. Shaw, Pittsburgh, Pa.
802,618. SOLDERING IMPLEMENT. B. E. Williams, Woodville, Mass.
802,634. DUST PAN. W. N. Greer, Greely, Neb.
802,811. GAS SAD IRON. G. W. Huber, Philadelphia, Pa.
802,832. MILK PAIL. F. St. Thomas, Birnamwood, Wis.
802,838. WINDOW SCREEN. C. G. Woods, St. Louis, Mo.
802,849. TOOL. A. J. Eddins and P. W. Aguell, Bigspring, Tex.
802,872. WRENCH. E. J. Moon, Atlanta, Ga.
802,917. LANTERN. J. Doering, New York, N. Y.

PATENTS EXPIRED OCTOBER 30, 1905.

391,771. WASHING MACHINE. J. Ahrends, Monmouth, Kan.
391,840. STAIR ROD SECURER. C. A. Gildemeyer, Haddonfield, N. J.
391,880. SCREW DRIVER. M. Cashin, New York, N. Y.
391,911. SASH HOLDER. C. McIntire, Newark, N. J.
391,922. CURTAIN ROLLER BRACKET, SASH LOCK, &c. S. H. Scott, Chanute, Kan.
391,933. WASH BENCH AND WRINGER HOLDER. W. Baldwin, Cuyler, N. Y.
391,957. PIPE WRENCH. J. A. Giles, Oswego, N. Y.
391,049. PRUNING SHEARS. C. J. Meyerholz, Santa Clara, Cal.
391,116. CORK EXTRACTOR. R. B. Gilchrist, Jersey City, N. J.
392,152. WRENCH. J. A. V. Gyllenberg, Hecla, Mont.

PATENTS ISSUED OCTOBER 31, 1905.

802,962. WRENCH. A. L. Bennett, Morgantown, W. Va.
802,983. LOCK FOR WINDOW SASHES. W. C. Gilbert, Williamstown, W. Va.
803,001. CASTER RETAINER. D. C. Maccuaig, Nebraska City, Neb.
803,007. WRENCH. J. J. A. Miller, Denver, Colo.
803,026. WEATHER STRIP. F. N. Stubbs, Ionia, Mich.
853,034. FRUIT CAN OPENER. F. Trickery, Detroit, Mich.
803,064. COMBINATION LOCK. J. E. Lemyre, Manchester, N. H.
803,113. OIL CAN ATTACHMENT. H. J. Klusmire, Holton, Kan.
803,204. DUST PAN. J. A. Widmer, Canyon Ferry, Mont.
803,231. PIPE WRENCH. E. Huntley, Seattle, Wash.
803,292. FOLDING RULE. C. E. Keefer, Morrell, Pa.
803,319. WRENCH. F. Zqicker, Indianapolis, Ind.
803,366. FURNITURE CASTER. W. Seavill, Waingaro, New Zealand.
803,381. DOUBLE SHADE AND CURTAIN BRACKET. G. W. Wiggins, Bridgeport, Conn.
803,397. PIPE WRENCH AND SHIFTING SPANNER. R. M. Carroll, Petone, New Zealand.
803,437. PLIERS. P. A. Scott, Chrisman, Ill.
803,512. COMBINATION TOOL. W. Scott, Jr., Nyack, N. Y.
803,529. COMBINED NUT AND PIPE WRENCH. M. E. Garwood, Bingham, Mich.

SEWING MACHINES AND HARDWARE DEALERS, No 4.

For the general Hardware dealer, success in selling sewing machines depends almost wholly on the confidence and courage with which he takes up and talks the line. The territory, *i. e.*, the character of your customers, their disposition with regard to buying sewing machines, whether favorably disposed or otherwise, are all matters of secondary importance. The confident Hardware dealer who knows his sewing machine and has the courage of his convictions will find means to interest and sell nearly all of his trade. There are a few people in every community who will buy sewing machines "sight-on-seen." Most people, however, are indifferent, and must be interested. First, by what the dealer *knows* and *believes* concerning his sewing machine; second, by what he *says* about it; and third, by *Public opinion,* or what others have said or done with the line in the community itself or elsewhere.

It is continuous effort that pays in selling sewing machines as in everything else. Sporadic effort means waste every time. If the dealer has confidence in the machine he sells and talks it up in that spirit and manner, that is the impression people will get. The first few machines sold, serve only as a foundation and aid to introduce the machine to your customers, and if a good machine, backed up and warranted by your jobber, it gains trade and friends for you.

A profitable way to stir up trade is to take some household article like sewing machines that there is a demand for and push it constantly. If your sewing machine is better than the one handled by your competitor, give a good, honest reason for it. Remember, the stronger you can be in your argument, the better people will like it. Not only be honest, but let the machine show and prove that you are. Most people, especially women, like to know the how and why of everything nowadays. Maybe the first few sewing machine sales will be slow in coming, but they will come, just the same, and there is no other specialty line in which the Hardware dealer can invest money where it will bring him better profit or satisfaction, than in a line of good, family sewing machines.

How to present your sewing machine proposition, *i. e.,* what selling points to advance, what language to employ and in what way it should be marshalled, can be learned only from experience. Especially should you study and know your sewing machine thoroughly. Make yourself so familiar with it that you can turn to it and talk sewing machines instantly, as soon as you see and "size up" your prospective customer. Make all the facts, reasons and arguments as to why your customers should buy your sewing machines so much a part of yourself, that you can handle them with the courage and emphasis that carries conviction. A good primary or educational rule is to make every canvass, whether a success or failure, give you points that will make you a better and stronger Hardware sewing machine salesman. Other things being equal, the general Hardware dealer has an advantage over all other merchants as his business and varied stock advertises the sewing machines, brings customers and divides expenses.

After ordering out your "trial shipment," place your sample line of sewing machcines on your floor and say to the first customer who enters your store, "I have just purchased a line of the celebrated ——— sewing macchines." Tell her that you guarantee the machine to do family sewing of any and all kinds, that the machine is always ready to do that perfectly on any and all kinds of goods. First, present to view the front side of the cabinet work, and while raising the head, call attention to such points in the woodwork as may appear desirable features, such as the beauty of finish, arrangement of drawers, the automatic lift feature, the beautiful furniture, its nice and graceful appearance, the light running, Ball-Bearing stand, etc., etc. If this line of talk does not satisfy your cusomer, ask her to take a seat at the machine. Tell her, the line being new, you have not yet mastered it as thoroughly as you would like. It is probable that your customer will know more about the machine in a few minutes' trial than you could tell her in an hour. All this time, use your best endeavor to inspire her with confidence in the machine—compliment her on her ability to operate it successfully, so that when she gets through, she is perfectly satisfied that she can successfully manage the machine to do the work she requires of it.

I would suggest to the Hardware dealer on receiving a trial shipment, to be careful in taking the machine out of the crate to avoid scratching or bruising the woodwork. I would thoroughly acquaint myself with the mechanism of the machine and its working parts; I would myself run the machine a few minutes and see that the belt is neither too tight nor too loose. Then oil it up and see that no nuts or screws are loose and that the band wheel runs perfectly straight and is plumb.

Every woman who comes in to buy a sewing machine has in her mind's eye the particular machine she wants. It is never the machine the dealer has in his store, but some hypothetical machine that she believes has some special features without which she wouldn't be satisfied. The writer knows of many just such cases where the purchaser preferred to pay $40.00 to $45.00 for a sewing machine when the Hardware dealer could have sold her his sewing machine at from $30.00 to $35.00, but because he couldn't prove that his sewing machine had all the improvements and a lot more that the lady believed the other machine possessed, the sale fell through.

The Hardware dealer has got to be prepared for just such objections on the part of the prospective purchaser and find out just what particular machine she has in her mind before he delivers his selling talk. Then he can deliver it from the tsandpoint of meeting her objections and showing her that his machine is equally as good by comparison and possibly possesses some features that the other machine does not.

Another important feature that the Hardware dealer does not dwell on with sufficient strength, in my estimation, is the offer to let the prospective sewing machine customer take the sewing machine for a few days, or a week, if necessary, and try to get familiar with it. Then, if it doesn't come up to her expectations, she is at perfect liberty to return it. This, any sewing machine agent will do, but every purchaser doesn't know it, and in the absence of any hint to the contrary, the lady would naturally think she would have to buy the machine any way. It's a great deal better to obtain her confidence by this frank method.

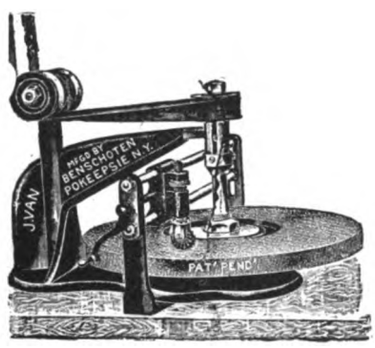
The best business-getting plan for any Hardware dealer in selling sewing machines is an attractive floor display. The floor samples will interest his trade and that interest is bound to make sales. It is the Hardware dealer who keeps his sewing machine constantly before his customers, who talks them up forcefully and plainly is the one who will make the most sales—sure.

Of course, it's no snap, but how can you expect to sell many sewing machines if you have only one or two on your floor? The line is certainly profitable and if it is worth handling at all, it is worth handling well. Order five or six machines from your jobber and place them in the front part of your store and outdoors, where people can see them. Show them to your customers. Advertise them in your local paper or with circulars. Your jobber will be glad to send you electrotypes and plenty of advertising matter, send every customer one of your books (except the dead beats) a personal letter and a sewing machine circular and invith them to see your machines. When customers think of buying, insist upon letting them try the machine in their homes at once for two or three days or a week, not longer. Let your motto be, "Sell as quick as you can, as often as you can"—never let a chance to make a sewing machine sale escape you.

In talking or showing up. keep the customers' attention on the machine—avoid outside talk. Have her to sit down and try the machine—show the customer how to thread the machine and help her to get started. Avoid argument as to the relative merits of other machines and undertake nothing in showing up that you have not mastered previously. Dwell only on the merits and commendable features of your machine. People like to know how and where things are made. Not a technical description, but just a hint here and there. Remember, the paramount object is to make sales; therefore, the best plan is to find the easist way to show up a machine with the least time and attention consumed and yet, make sales.

In selecting a sewing machine to handle, choose one from your jobber that you have the utmost confidence in. One that he highly recommends, therefore, one that you know is first class in every particular and a machine that you can strongly and honestly recommend, in every way, to your customers. By all means, handle only a good sewing machine, because by having a high appreciation of the machine you are selling, you are more enthusiastic, and can speak in more positive terms about its many fine qualities, durability, good work, etc., etc.

If you will put in a line of sewing machines and talk up your machines in the right spirit and manner, you will surely get your proportion of the sewing machine trade. By all means, try to make he machine interesting and desirable to your customer. Be different from the others in your line.



G. H. DIRHOLD, St. Louis, Mo.

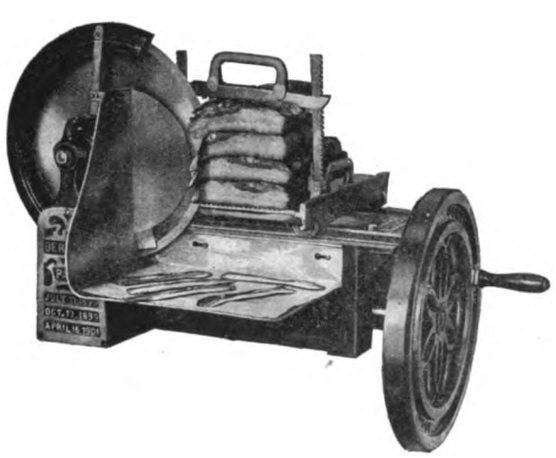
NEW GOODS AND SPECIALTIES.

VAN BENSCHOTEN'S PATENT CLIPPER GRINDER.

John Van Benschoten, 14-20 Catherine Street, Poughkeepsie, N. Y., is the manufacturer of the Patent Clipper Grinder, which we illustrate herewith. The Grinder is simple in operation; a depression of ⅛ inch at a 4-inch circle in the center of the stone allows a flat 5 inches outside grinding surface on which clippers are held parallel, moving them laterally a trifle over the two edges while grinding, thus keeping the surface perfectly flat

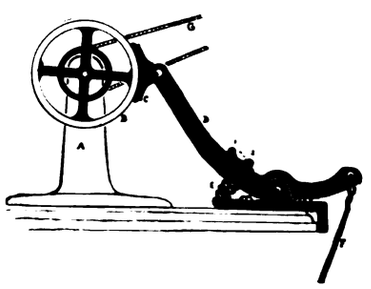


PATENT CLIPPER GRINDER.

and true. A rigid and absolutely positive truing attachment permits the stone being trued at will, removing all unevenness and glaze. It is claimed that the sharpening of clippers, from the fact that all previous grinders have been too expensive, has been confined entirely to the manufacturers; and, as clippers require constant grinding to keep them in good condition, a purchase of one of these inexpensive grinders can establish a well-equipped business with a steady income. Write to the manufacturers how this can be done.

THE AMERICAN SLICING MACHINE.

The American Slicing Machine Co., 56 Fifth Avenue, Chicago, Ill., with an Eastern office at 9 East Fourteenth Street, New York, are placing upon the market the American Slicing Machine, of which we give an illustration. It is simple in construction, substantially made, works easy with marvelous rapidity, and is not liable to get out of order. All parts are nicely japanned, nickel plated or of polished steel, so that the machine forms a great attraction when used in view of customers or the public. Among the special advantages this machine possesses over any-



THE AMERICAN SLICING MACHINE.

thing in the nature of a slicing machine: The meat is not touched by the hands after it has once been placed on the carriage of the machine. The thickness of the slices is determined by the feed-adjusting lever, and any desired thickness can be obtained from that of the wafer to ⅜ of an inch. The meat can be sliced to the last limit and no ragged edges to be dealt with. The rapidity of the cutting operation is such that it can easily perform the work of from four to six men, and, as a child can work the machine as readily as an adult, it is a labor-saving process of the utmost importance. The machine will cut two or three kinds of meat at one and the same time, and whether the carriage contains its full equipment or not, the ease and efficiency of the operation remain throughout. The knife requires sharpening only two or three times a week, and the process is performed with greater ease than is possible with a hand knife. These machines have been adopted by many of the leading Department Stores, butcher shops, delicatessen stores, catering establishments, hotels, restaurants, etc., to whose attention its merits have been brought.

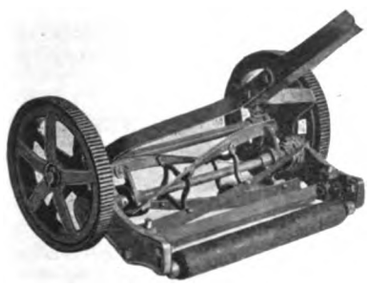
AUTO-BRAKE WATER MOTOR ATTACHMENT.

The A. Rosenberg Co., Baltimore, Md., are manufacturing a fine line of Water Motors suitable for the Hardware trade. Their "Polar" styles of Motors and Fans are provided with a polished cast-brass ball and socket joint, which allows the Motor to be adjusted and tilted in any direction while running, which feature is broadly protected by letters patent granted June 28th, 1898, and they claim no one has any right whatever to make, use, or sell any other Water Motor that can be tilted and adjusted in this way. We illustrate their "Auto-Brake" attachment for

AUTO-BRAKE WATER MOTOR ATTACHMENT.

stopping and starting a sewing machine when driven by their Water Motor. "A" represents any sewing machine and "B" its balance wheel, "C" the shoe of the Auto-Brake "D," to which is attached the spring "E," which operates to press the brake against the balance wheel when the foot is removed from the treadle of the sewing machine. The treadle is connected to the brake by removing the pitman and then attaching the wire "F" in its place on the treadle. This brake can be attached to any make of sewing machine, either plain or drop head, automatic or high arm heads. For the automatic styles it is only necessary to adjust the spring from the lug "2" to the lug "1" and turn the shoe "C" at suitable angle to allow it to rest on the wheel. Their motors are interchangeable and the motors may be turned into fans by removing the pulleys and attaching their fan and guard. Their 7-inch motor bodies are always fitted to attach a guard if desired and will be furnished this way unless otherwise ordered. Besides operating sewing machines, their motors are in use by dairies in making butter, separating cream, operating ice cream freezers, washing bottles. By grocers for driving coffee mills and grinders, by butchers for grinding meats and making sausage, etc. For the Holiday trade the Motors make a most useful present, and sell readily for operating toys, dynamos for charging batteries and lighting Xmas trees and show window displays. They will operate a washing machine, air-compressor, dentists' lathe or drill, jewelers' lathe or buffer, printing presses, scroll saws, circular saws, blacksmith forges, or any machine where there is sufficient supply and the proper motor attached to suit the circumstances. The A. Rosenberg Co. will be pleased to open correspondence and give any desired information to Hardware dealers.

"AVERY" SEAMLESS STEEL HOTEL WARE.



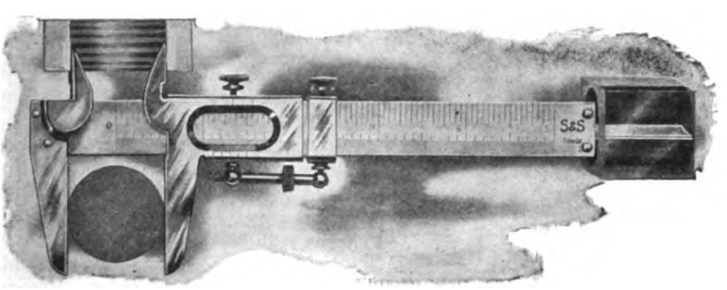
The Avery Stamping Co., manufacturers of the "Never-Break" steel spiders, griddles, kettles, shovels, etc., have been giving especial attention of late to their Seamless Steel Hotel Ware, which they furnish with heavy steel covers. It is claimed that this hotel ware is made of the thickness of sheet steel, which gives the best culinary results. It is said to rest flat upon the range, will not scorch and burn its contents and will not warp or twist out of shape from the fiercest heat. It is claimed that this hotel ware is cheaper than copper ware, yet superior to the latter in some ways. The Avery Stamping Company's steel hotel ware is double coated with absolutely pure tin, free from

Digitized by Google

all alloys, and it is remarked there is no danger of poisoning if in the course of time the tin wears off in spots. This hotel ware is made for the most strenuous service, and is equally well adapted for use in steamship cuisines, railroad dining cars and, in fact, for all public institutions demanding something extra durable. Catalogue and full particulars will be sent to all merchants interested in goods representative of the highest quality, design and finish.

THE HAWK LAWN MOWER.

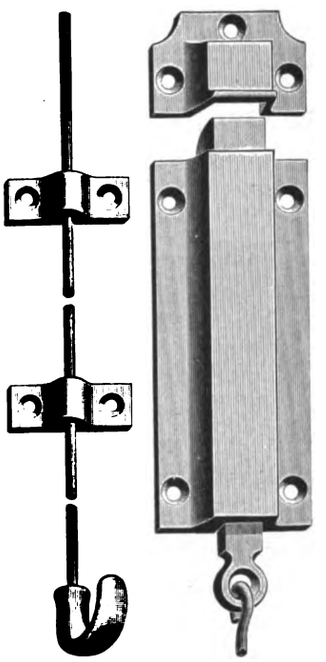
The Globe Lawn Mower & Mfg. Co., Reading, Pa., is engaged in manufacturing the Hawk Ball Bearing Lawn Mower, an illustration of which accompanies this article, which has 10-inch drive wheels, 5½-inch reels and four blades. It has a patented



THE HAWK LAWN MOWER.

cutter bar adjustment and pinion clutch on which they claim a superiority. It is claimed to cut closer to a border than other Lawn Mowers, making it a desirable mower for use on golf links, parks, and fine lawns. It is constructed so it will cut with ease grass 7 to 8 inches high; is elegantly finished with gold body and red enameled drive wheels and has a bottom knife made of steel that is expressly forged for the purpose and fully guaranteed.

S. & S. VERNIER CALIPER.

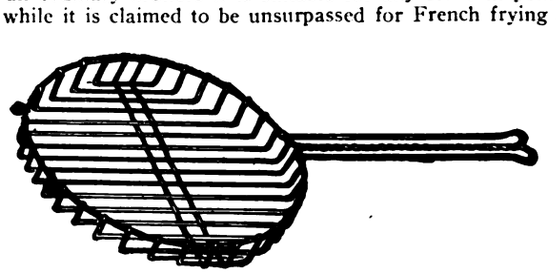


Schuchardt & Schutte, 136 Liberty Street, New York, offer the trade the S. & S. Vernier Caliper, shown in the illustration which accompanies this, and also demonstrates the method of ascertaining accurately inside and outside diameters and depths. They are made in full polished, with and without horizontal adjusting screw, and in the same styles in full nickel plate. The instrument is 6½ inches long over all, when closed, the end depth gauge having a capacity of 3 13-16 inches. The style which we illustrate is graduated in sixteenths and fiftieths of an inch, the vernier attachment enabling the user to get positive measurements to the thousandth of an inch. Similar calipers are also furnished with graduations and verniers for readings to 1-128 inch and 1-10 mm., metric measure. There can be no confusion in determining results, as all three styles of gauges are read from similar scales and verniers. Leather pockets with metallic snap buttons are furnished for carrying. The four tools list but $2.25, $2.55, $2.90 and $3.15 each, according to finish and whether or not they have the adjusting screw; subject to trade discounts.

S. & S. VERNIER CALIPER AND DEPTH GAUGE.

SPRING BOLTS WITH RODS.

Sargent & Co., New Haven, Conn., and 149-153 Leonard Street, New York, are distributing to the trade an extra page, 568B, to their catalogue, which illustrates fully their new line of Spring Bolts with Rod, in the style of the illustration herewith. This is something new, to be used the same as their chain bolts, the advantage being in the nature of an improvement, making its operation easy while avoiding the rattling which usually is an accompaniment of the chain bolt. The bolt, of which we give an illustration, is made of cast bronze metal, with bronze metal rods, in the following finishes: Highly finished, Antique Copper and Antique Copper Sand finish, in 2, 3, 4 and 6-inch sizes. This bolt is also made in the same metal and finishes, but extra heavy, in 6 and 8-inch sizes. Another group, of cast iron with triangular bolt, is made in 3, 4, 6 and 8-inch sizes, finished in bronze plated, highly polished, antique copper and

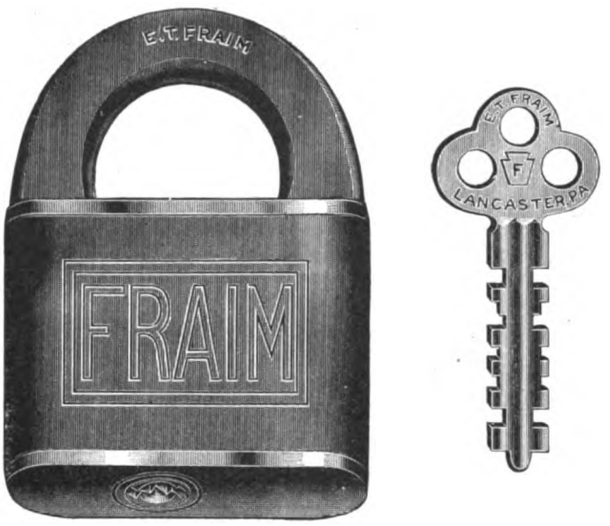


A NEW SPRING BOLT.

antique copper and finish. All are packed with screws to match and have rods 7 feet long, the material of which corresponds to the bolts. Shorter rods, if so ordered, can be furnished at a less price.

THE SMOKELESS BROILER.

The Bridgeport Wire Goods Co., Bridgeport, Conn., and 82 West Broadway, New York, is placing upon the market the Smokeless Broiler, which we show in an illustration herewith, and which is calculated to meet with a large sale, as it is made to be sold at a moderate price. It is manufactured from the best steel wire adapted for the purpose, and retinned when finished, which is referred to as being practically indestructible. Like all ordinary broilers it is suitable for any stove in point of size, while it is claimed to be unsurpassed for French frying and



THE SMOKELESS BROILER.

especially for toasting. Inverted, it makes an ideal gas stove toaster. Being in only a single part, it is readily kept in a good, clean condition after using, as it can be left in the stove to burn off any grease, as the food can be removed from the broiler without any necessity of disturbing the broiler in the operation. It is made in two sizes, one of which we illustrate, to fit the ordinary stove, the other being oval in shape to cover the whole fire. Send for circular giving further information about this saleable novelty.

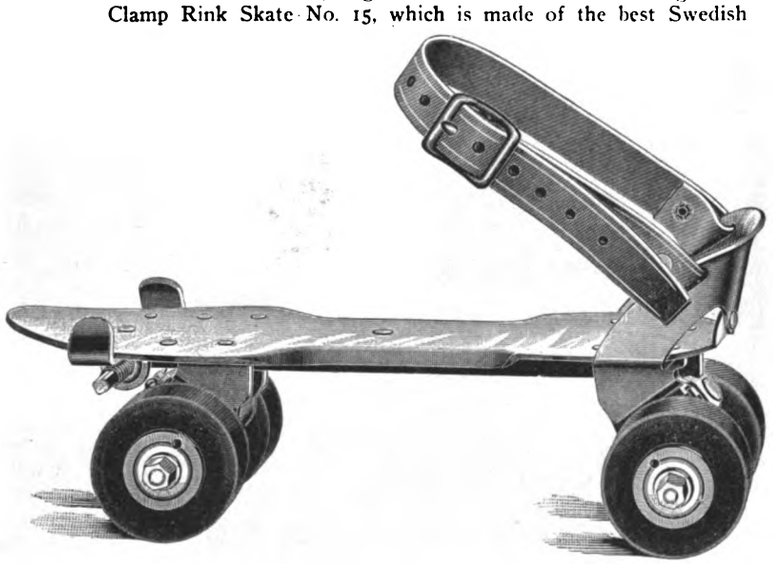
ARMOURED STEEL PADLOCK NO. 464.

Keystone Lock Works, E. T. Fraim, proprietor, Lancaster, Pa., has added to his important and extensive line of Padlocks the one we illustrate with a cut that is full size. It is made from armoured steel with solid bronze trimmings. Has bronze metal



ARMOURED STEEL PADLOCK, NO. 464.

top and cap, with black steel shackle and case. It has two nickel plated corrugated keys and is a Padlock that is already a favorite in the trade. They are made in two sizes, with and without chain, 1 11-16 and 2 inch, the latter of which we illustrate.

UNION HARDWARE COMPANY'S NEW ROLLER SKATES.

The Union Hardware Co., Torrington, Conn., New York office with Tower & Lyon, 95 Chambers Street, are the manufacturers of a line of Roller Skates shown in their latest catalogue, among which are the Roller Skates illustrated in the course of this article. The illustration, Fig. 1, shows their Ball Bearing Half Clamp Rink Skate No. 15, which is made of the best Swedish

BALL BEARING RINK SKATE, NO. 15.

cold rolled steel, which gives the skate a finished appearance. Special attention is called to the construction of the frame, which is of unusual strength. The foot plate is strengthened by a brace which is riveted to it, extending from the toe clamps to the back of the heel. The trucks are oscillating, with rubber cushions, that turn in a three-foot circle. The ball bearing skates are furnished with either hemacite or steel rollers, and are handsomely nickel plated. The illustration, Fig. 2, shows their Ladies' Ball Bearing Rink Skate No. 14, which is of the same general construction as No. 15, except that it is fitted with russet grain leather heel. These skates are said to be exceedingly popular for Rink use. The development of the Roller Skate Rink has been very rapid during the Summer and Fall, and Rinks are now operated in almost all of the large cities throughout the country, especially in New England, while the Middle West and the Southern States are also becoming largely interested in the sport.

"RUSSWIN" DESIGNS.

THE RUSSELL & ERWIN MFG. CO., 45-47 Chambers St., New York, have adopted an extremely attractive method of showing the artistic conceptions designed by them, in Bronz Metal Locks, Knobs and Escutcheons, by mounting the several designs in regular order on a series of leaflets numbering sixteen, and engraved in the highest style of art. In presenting these illustrations of representative designs in various schools they introduce them with a few words regarding Russwin Hardware. The illustrations themselves prove that the designer understands and follows the influence of the period to which each design belongs and brings its peculiar beauties into his work. His production conforms in every line with the style of its particular period. The mechanical skill bestowed upon Russwin Hardware is of the same high order. The making of castings, the finishing of surfaces, the fitting of working parts, and the finishing of the goods are accomplished by skilled mechanics with the most careful supervision. The result is Hardware unsurpassed in purity of design, mechanical perfection and durability of finish. In these illustrations every prominent architectural design is represented, and in the better known schools the choice of a number of designs is afforded.

HARDWARE SHELVING LOWER IN PRICE.

J. D. Warren Mfg. Co., Masonic Temple, Chicago, Ill., on August 1, 1905, published a new Price List of Warren's Hardware Shelving which shows an average reduction of 15 per cent. from the catalogue of one year ago, dated September 1, 1904, which was secured through the installation of machinery made especially for them. It will be noticed that the Warren Oak Cabinets, Bases, and Counters are made at prices for each section as low as $1.50, $2.00, $2.50, $3.00, $4.00 and $4.50 per lineal foot. Oak Drawer Cabinets for Hardware and Bolts as low as $3.50 and $4.50 per lineal foot, the $4.50 covering the very good selling Nos. A2613 and A2617. Oak Sliding Glass Door Display Wall Cabinets at $4.50 per lineal foot, under which No. A2140—a very practical pattern—comes. These prices should appeal to every merchant wishing inexpensive Shelving, having advantages embodied, learned from their 12 years experience in manufacturing Hardware Shelving exclusively. They give assurance that at all times merchants will receive the benefits of their careful study concerning the cost of construction through advantages of machines made especially for their work; and in any other manner they can, without sacrificing any of the good qualities and workmanship which are held paramount to price; as evidence of this assurance—they feel nothing can speak more definitely of their business methods than does this Price List at a time when lumber is advancing and their factory capacity booked nearly two months ahead.

NEW CARRIAGE HEATERS.

The enormous demand made upon the Chicago Flexible Shaft Co., 106 La Salle Ave., Chicago, for the Clark Carriage Heaters has brought about unusual perfection in the making of these cold weather necessities. This firm is said to have the most complete equipment of any for the economical manufacture of carriage heaters. They make about 20 styles of heaters which range from a practical low priced wagon heater to some of regal beauty and perfection. Two of their new heaters are proving exceptional favorites with automobile and carriage owners. The "Duchess" is very popular. It is reputed to be the most handsome carriage heater ever made. It is 24 inches long, weighs 12 pounds, and has adjustable side and end ventilators. The ends are rolled stamped metal heavily nickel plated and the cover is a rich maroon velvet plush. The other of these is known as the Clark No. 7 X. It is very similar to the Clark No. 7 D, but it is a much handsomer heater. The 7 D has been one of the firm's best sellers, and the new 7 X is said to be growing even more popular. It is 14 inches long, weighs 9 pounds and has adjustable side and end ventilators. It has solid metal ends heavily nickel plated. The cover is an expensive maroon mohair plush. It appeals to high class trade who are always looking for the best and the sale of it to this class is heavy.

CHARLES MORRILL'S SPECIALTIES.

Charles Morrill, of 277 Broadway, New York, informs us that their business is constantly showing a healthy increase in volume both in the United States and abroad. This firm has always made quality the paramount issue, with the result that their goods are the standards in their respective lines throughout the civilized world, and the name "Morrill" has become a synonym in the Hardware trade for the highest quality of tools both in material, workmanship and character of work performed.

Quite a number of houses, from time to time, have requested them to put in cheaper material and labor so as to lessen the cost, but this they have unswervingly refused to do, and the reputation and business they have obtained is a justification of this policy.

RECENT TRADE PUBLICATIONS.

I. S. Spencer's Sons, Inc., Guilford, Conn., have presented us with an unusually artistic box, which is in large pamphlet form, finely printed on excellent paper. They state by way of "Foreword" as follows: "The purpose of this book is to remind those who have visited us of our works, and to disclose to others the nature and extent of our facilities for satisfactorily manufacturing light gray iron and brass castings and general Hardware." The building was started in 1857 and the business has grown extensively since that time. They claim that the development has been produced by fair dealing combined with constant effort to maintain the highest standards of workmanship and material. The book contains numerous views of the different Departments of the Spencer Works, and is illustrated by the camera. It is without doubt a handsome production, the cover being beautifully decorated in green and gold. A copy of this most interesting book will be sent upon application.

J. E. Bolles Iron & Wire Works, Fourth and Porter Streets, Detroit, Mich., have made us the recipients of their new catalogue, No. 21, which is finely gotten up in the good taste characteristic of these people. The book is profusely illustrated, showing views of all kinds of Ornamental Iron Work in Bank Railings, Grilles, Elevator Enclosures and Cabs, Iron, Wire, Brass and Bronze Work, Iron Settees for Parks and Lawns, Fencing and Entrance Gates, and also a large line of Builders' Specialties, such as Fire Escapes, Balconies, Iron Stairs, Shutters, etc. They state that their products are Standard in quality and are accurately illustrated in the catalogue, and also that they are constantly adding new designs. In connection with each illustration a brief description of the article is given, together with the measurements and prices of same. This book will be found very valuable and instructive and will be furnished to all interested parties writing for same.

The Peters Cartridge Co., Cincinnati, Ohio, and 98 Chambers Street, New York, have sent us one of their latest price lists of Metallic Cartridges, Loaded and Empty Shells, Primers, Gun Wads, etc. The book contains 60 pages and is very well arranged throughout, and will be found very useful to those interested in this particular line. In addition to this price list we have received a copy of the sixteenth edition of a pamphlet entitled "Handy Book for Trap Shooters and Sportsmen," published by The King Powder Company and The Peters Cartridge Company. This book contains numerous points of interest to sportsmen and trap shooters and will be found very useful and handy to have for reference. Several pages are devoted to an article on "Game Laws," giving synopses of the Game Laws in each State of the Union and in the British Possessions in North America. The book also contains several other articles in regard to shooting rules and one very interesting article on "How to Organize a Gun Club and Conduct a Tournament." If you care to receive one or both of these little books they will be sent on receipt of application.

The Boss Manufacturing Company, Kewanee, Ill., and New York, N. Y., manufacturers of Husking Gloves, Mittens and Pins, Hand Leathers, Wrist Bands, Canton Flannel Gloves and Mittens, etc., have sent us a copy of their latest catalogue, which is published with a view to familiarizing the trade with the extensiveness of the Boss establishment, whose rapid growth since 1890 is unprecedented, and aiding them to a fuller comprehension of the superior quality of the goods they manufacture. They call attention to the fact that very striking improvements are being made in the manufacture of gloves and mittens in their factories, improvements which, they claim, distinguish their goods from all others. They also state that the "Boss" Huskers have acquired an enviable reputation all over the world as being the finest it is possible to produce. The catalogue is a very excellent production and attractive in appearance. It is extensively illustrated and is indexed. If you are interested send for one.

Owosso Mfg. Co., Owosso, Mich., have sent us their 1905-06 catalogue and price list, which describes and illustrates the Owosso Snow Shovels, including the "Peerless" "Boys' and Toy Shovels," "Dispatch," "Challenge," "Peninsular," "Ideal," and the "Bonanza," which is a snow shovel and scraper combined. The catalogue is in pamphlet form and will be found a handy and useful one to those interested in this particular line. If you are not already in possession of same send at once, as they are free for the asking.

Tragle Mfg. Co., Reading, Pa., have recently issued their Annual Catalogue and Price List No. 7, which is a very handy and useful little book, containing numerous illustrations. They claim that they manufacture the finest and most complete line of Veterinary Files and Floats in the world, and guarantee all their goods with the brand "Tragle" on them to be absolutely first quality. They will be pleased to supply their catalogue to any one interested in this line of goods. Send for one.

The Ludlow-Saylor Wire Company, St. Louis, Mo., have issued a Special Catalogue of Fly Screen Cloth, Galvanized Hardware Cloth, Galvanized Nettings, Riddles, Flower Stands, Wire Trainers, etc. The catalogue is in small pamphlet form, is very attractive in appearance, and contains numerous illustrations of the goods manufactured by this company. If you have not received one of these catalogues and are interested in this class of goods the company will be only too glad to send you a copy. They state that they also manufacture Wire Cloth in all grades in Iron, Brass, Copper, Bronze or Galvanized for Mining and Concentrating Plants, and that they will be pleased to quote prices on any of these grades of goods and send special catalogue upon application.

The Griffin Manufacturing Co., Erie Pa., are presenting to the trade their 1905 catalogue and price list of Wrought Steel and Bronze Goods, including Hinges, Butts, Shelf Brackets, Door Bolts and Miscellaneous Hardware. They state in introducing the book: "We now have our own rolling mills and are thereby enabled at all times to get the right grade of material quickly, insuring to our patrons prompt service and the very best goods that skill, money and experience can produce." The catalogue is in book form, 9x6 inches, with bright red cloth cover, lettered in gilt, and is profusely illustrated. The book will be sent free upon request.

The Buckeye Paint and Varnish Co., Toledo, Ohio, have sent us a number of circulars recently printed by them, setting forth the important features of their goods, including their Mixed Paints, Carriage Paints, Decorative House Paints, and their Buckeye Paint and Varnish Remover, Buckeye White Lead (guaranteed strictly pure), and Crystal Rock Finish. For further information regarding the products of this Company write for circulars, etc., which will be gladly sent on receipt of application for same.

F. H. Brammer Mfg. Co., Davenport, Iowa, have sent us a neat little pamphlet exploiting their O. K. Washing Machines, in regard to which they state: "The O. K. Washing Machine is a success. It will do the work. It will save you and save the clothes. The best is the kind that has been proved, and the O. K. Washer is the proved one." Send for this interesting little booklet and learn more of this valuable household necessity.

The Portland Ladder Company, 545-547 Rhine Street, Portland, Ore., have issued a new catalogue and price list of their Fire, Farm, Trestle and Extension Ladders, all of which they claim are made from carefully selected timber, with second growth hard wood rungs, tenoned, firmly put together, and every rung securely fastened at each end. Catalogue may be had for the asking.

The Armstrong Manufacturing Co., Bridgeport, Conn., have sent us a copy of their new catalogue, which describes and illustrates their Stocks and Dies, and Water, Gas, and Steam Fitters' Tools and Machines for cutting off and threading pipe. They claim that these machines are built with the same care, and under the same able mechanical supervision as their stocks and dies and other small tools, which are so well known and generally liked that they are found in the kit of every first-class steam and gas fitter in the civilized world. The catalogue contains a Table of Standard Sizes and a Price List, and is indexed. A copy of this very interesting and instructive book will be gladly sent upon request.

W. A. Busse & Co., Chicago, Ill., are again bringing into prominence their Patent Upholstered Adjustable Chair Seats by the use of their 1905-6 Catalogue. They claim that their seats meet every requirement, being rich in appearance, comfortable, durable and cheap in price, and that they can be put on a chair in an instant without the use of tools, as they do not require cutting or trimming or the use of nails. For further information, prices, etc., write for catalogue. It will be gladly sent upon request.

MIDDLE WEST BOOMING.

Business conditions through the middle west have never been better than they are this fall, and there is much upon which to base the high optimistic view which prevails in the entire west. The corn crop is the greatest in the history of the country and is being sold at a high price—and the general agricultural yield is the best the country has ever known. One of the large jobbers here in Sioux City, Ia., in remarking on the splendid business said: "The United States has made great strides in manufacturing and our industrial progress has been remarkable in all directions; still we are an agricultural nation, and the plowshare is the mainspring of our national prosperity. And with the farmer happy and prosperous, comes business to the merchant, jobber and manufacturer."

In all these Missouri River cities one sees a large amount of new buildings which is one of the expressions of the country's prosperity, and is the kind of expression that is most welcomed by the Hardware man.

The big jobbing Hardware house of Knapp & Spencer Co. occupies one of the best equipped Hardware warehouses in the country; the building is practically fire proof and covers about half a city block, being six stories high, and stocked from its sub-cellar to the roof with a very comprehensive line of Hardware. The trade of this concern is constantly enlarging, new territory being added and the adjacent towns being worked still more closely.

A large double store is occupied by the Orcutt Co., at 1010-1012 4th street which is one of the most attractive stores in Sioux City. The windows are used to good advantage in displaying and showing the lines of Hardware, house furnishing and sporting goods of which the Orcutt Co. carry a big line. In speaking of the city's growth M. Orcutt said: "We realize that the future of our concern was either to push the wholesale trade or to enlarge our retail business. We, therefore, after the big fire, built a store especially adapted to easily handle a large retail business. We have added many new lines of goods and find that each month our business is growing." The success of the Orcutt Company is good proof that it pays, where competition is keen, the Hardware dealer to concentrate his efforts either in enlarging the retail or wholesale end and to drop one or the other, rather than in trying to spread the business in both branches, and having neither a good retail or jobbing Hardware stock.

Another well stocked Sioux City store is that of Wm. Warnock located at 324 Fourth street and through to 313-317 Douglas street. A. W. Ivins, the manager of the Hardware department, talked interestingly about trade conditions and said: "After the big fire here the re-building began at once, and in addition to that the steady growth of the city has made a wonderful demand for building materials and supplies." The stock carried by Wm. Warnock is large and varied—embracing as it does a complete line of Hardware, stoves, paints and oils, sporting goods and automobiles. A complete plumbing and tin shop is maintained and a large business is done in steel and storage tanks.

A distinct feature of Hunt & Schuetz Hardware store is the big sign with letters about 3 feet in height covering the front of the store just above the double windows. This is the largest store sign in Sioux City and certainly no one will miss the store of Hunt & Schuetz passing along on this street.

During the past fifteen months there has been more new buildings erected in Omaha than for some years previous. Both the big jobbers and all the retailers here say that trade has been better this summer than ever before, and the outlook is very satisfactory. The Lee Glass Andreesen Hardware Co. cover a large territory and are constantly widening their business.

The store of the Johnson Hardware Co., at 1217 Farman street is one of Omaha's largest retail Hardware establishments and do a fine business in builders' Hardware which is the specialty of this concern.

An air of push and enterprise about the wholesale house of Wright & Wilhelmy Hardware Co. spoke well for the prosperity of this progressive Omaha store.

Des Moines, Iowa, has become a large jobbing point; centrally situated, Des Moines is the natural distributing point for the great state of Iowa. The Hardware jobbers here, however, are reaching west and north and covering a country extending into four states. The growth and success of the Brown-Hurley Hardware Co. has been most marked. Mr. T. E. Hurley yet a very young man is at the head of this large concern now traveling some sixteen men. By the attention to business details, prompt shipments and carrying a large complete stock the Brown-Hurley Hardware Co. are not only holding their trade against competition but fast extending their business into new territory. It was pointed out to your correspondent by Mr. Hurley that the present big corn crop and good prices was the best guarantee for the business prosperity for a year to come. A very complete loose leaf catalogue is issued by the Brown-Hurley Hardware Co.

The other large wholesale house of Des Moines is the Luthe Hardware Co. Mr. Luthe said that business could not be better, that there was a growing demand for a better class of goods and Sportsman's supplies were in a constantly increasing demand. Proving the fact that the country Hardware dealers are prosperous and are also on the lookout for profitable and up to date side lines.

With the rapid growth of this middle western country, the jobbers of Hardware have kept apace. Atchinson, Kansas, has two large Hardware concerns. The business of Blish, Mize & Stillman Hardware Co. is being looked after by sixteen salesmen on the road, who cover Kansas, Iowa, Nebraska and Missouri. Mr. Sillman said that business has never been better and that the outlook was very encouraging. Sporting goods are being pushed extensively by this concern and this branch of the trade is well handled by Mr. Barlow. At the recent corn carnival in Atchinson, the Blish, Mize & Stillman Hardware Co. made a decided hit by decorating their windows very artistically with corn and having a large mechanical steam train which was operated in the window. In the rear was a painting representing a Kansas corn farm, the train crossing the bridge. It was very effective. In all about fourteen bushels of corn was used in the two windows.

The business of the A. J. Harwi Hardware Co. is largely wholesale, although at the retail store of this concern an active trade was going on. A new and complete general Hardware catalogue was issued by the Harwi Hardware Co. last season and is kept up to date, being of the loose leaf style.

With business at its flood tide, with large stocks of Hardware, much of which is advancing in price, it ought not be a difficult matter for the middle western Hardware jobbers to pay good dividends this season. There seems to be a good healthy undertone running through the business—i. e., that for better prices. In most cases the jobbers of this territory are good friends and are not sacrificing profits to get even with a competitor.

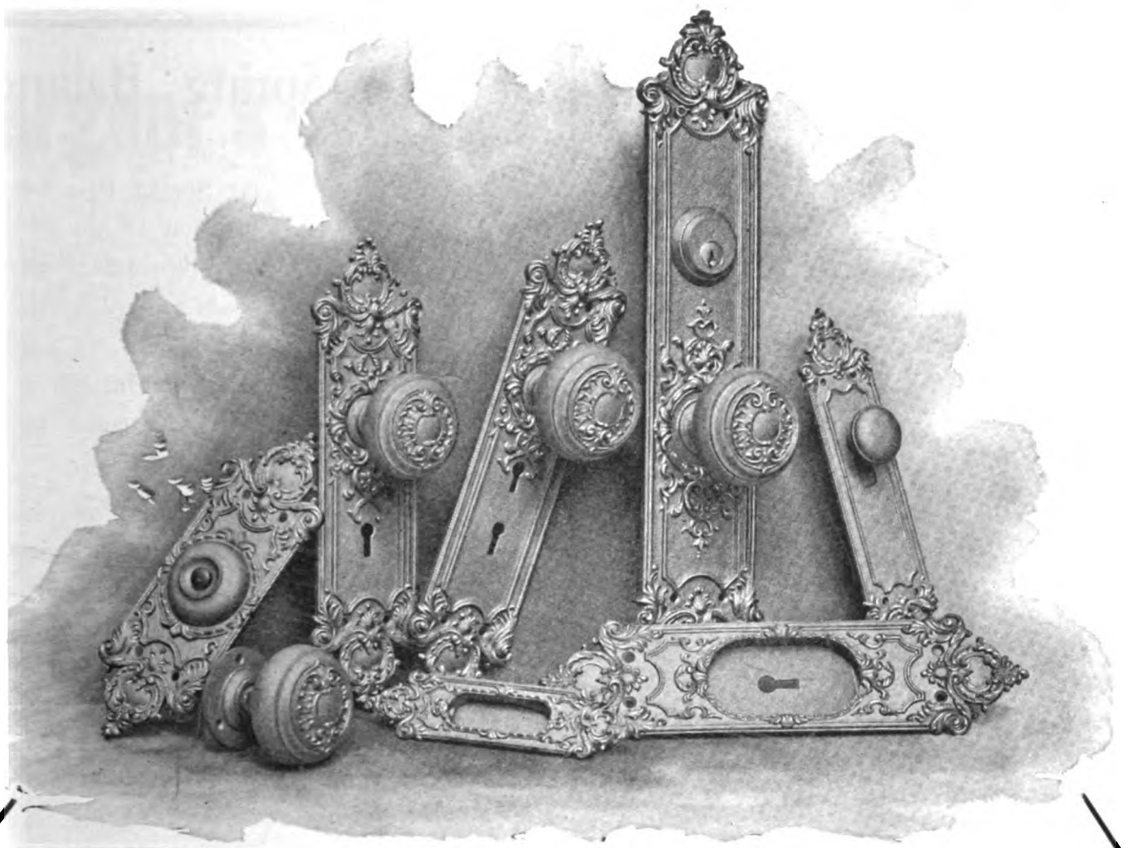
Hammernail.

BISSELL'S CHRISTMAS OFFER FOR 1905.

We have before us Bissell's Liberal Christmas Offer, in which they give the greatest inducement ever made to secure an order, which is in the form of an agreement which the dealer must sign and return order blank before December 1. This is the

DEALER'S AGREEMENT.

"We hereby agree to display Bissell's 'Cyco' Bearing Sweepers in our windows, and advertise them in the newspapers, during the holiday season 1905; and as payment therefor we are to receive with this order one Bissell's 'Superba' sweeper free. We agree to send you copy of newspaper containing holiday sweeper advertisement."



This is to accompany an order for one dozen Carpet Sweepers, assorted, of the various kinds they make, but all are to be "Cyco Bearing," and with which they include free of charge: One No. 4 Sweeper Easel, 500 New Christmas Circulars, One Large Christmas Poster, Three New Christmas Streamers, One Economy Poster, Seven Assorted Show Cards, New Electrotypes and New Advertisements.

Write to the company for further information.

AN EFFECTIVE WAY OF INCREASING EXPORT TRADE.

Under the above heading, we read in "Der Einkaufer", of Berlin: "The American Consul at Prague, Urbain J. Ledoux, has, on the pattern of a chamber of commerce, established a special bureau called the commercial intelligence department of the Prague consulate, affording every opportunity for the registration and examination of catalogues of all kinds, and so classified that importers and exporters can be posted immediately upon the possibility of their doing business. The catalogues, prices current, discount sheets, etc., must naturally be so arranged that anybody seeking information can find it at once. Catalogues without prices or discount lists would be useless; moreover, the weights and measures should be reduced to the standards adopted in the country of their destination. Lists of references should also be added. The catalogues and other printed matter are classed according to the different branches, so that the visitor may easily find what he wants. In order that the filing can be done effectually, it is necessary that the parties sending printed matter should at the same time advise our consuls regarding the various specialties they handle, so as to save tedious searching and to facilitate registration. In bringing this new form of commercial propaganda to the notice of our readers, we can but invite them to join in a movement which, under modern circumstances, can be but productive of beneficial results."

YGRANDE DESIGN (LOUIS XIV). SARGENT'S ARTISTIC HARDWARE

Educate your customers---those who are erecting homes and other buildings in your neighborhood---to the use of better hardware. A fine house should be fitted with fine hardware; cheap goods are out of place in an elegant dwelling.

It will give you a larger profit and your customers will be better satisfied if they trim their buildings with

Sargent's Artistic Hardware and Easy Spring Locks

than if substitute goods said to be "as good" are used.

We have a complete line of Locks suitable for all classes of work and a variety of Designs to harmonize with all schools of architecture.

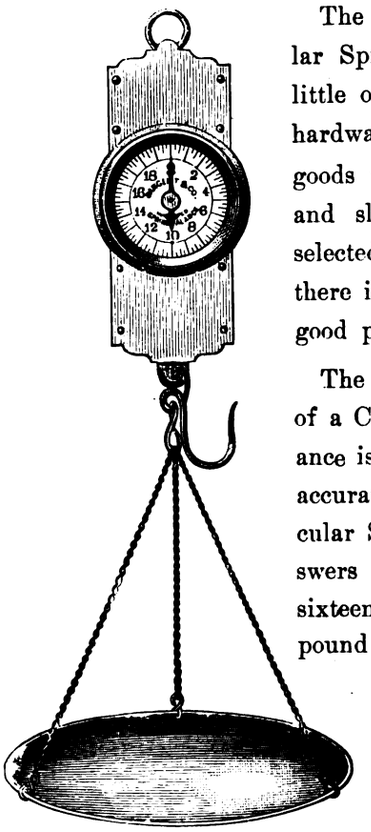
SARGENT & COMPANY, Manufacturers

New Haven, Conn. New York Philadelphia Boston Chicago

Digitized by Google

Everybody is now building, or will be soon,

and there will be much use for builders' hardware. To make sure of your share of the profits sow the seed now by distributing among prospective builders in your neighborhood the attractive, business-bringing printed matter we will furnish to advertise



Sargent's Artistic Hardware and Easy Spring Locks.

Every building fitted with these goods means a satisfied builder—your pleased customer, if you furnish the goods.

Our Store Door Handle Line

is complete, embracing a great variety of patterns. Both plain and ornamental goods are represented. Bit Key Locks, Flat Key Locks and Cylinder Locks are all used.

Sargent's Spring Balances

White Enameled, Front, Round Pan.

The purchase of Circular Spring Balances is a little out of the ordinary hardware line; they are goods with delicate parts and should be carefully selected. In selling them there is a chance to make good profit.

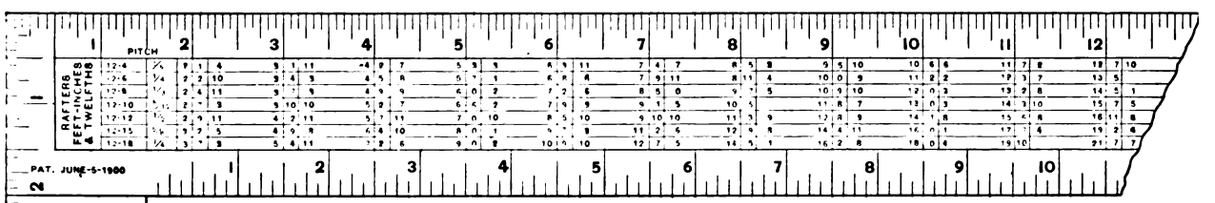
The first requirement of a Circular Spring Balance is that it shall weigh accurately. Sargent's Circular Spring Balances answers this requirement—sixteen ounces to the pound every time.

Again, the balance must be strong in its construction so that it will withstand the wear and tear of almost continuous use. Sargent's Balances fill the bill in this respect—they are strong and durable.

Finish goes a long way in these goods and the finish of our balances is first class; they are made in a variety of styles, with brass front and enameled front, round pans, square pan and scoop. All are warranted

We make also Pocket, Round and Straight Balances in various styles, also Scale Beams.

Here is a First-class Padlock



well-made, strong and serviceable. It is made of Bronze with Double-locking Spring Shackle and has two keys. Can be master-keyed in sets with our Cylinder Door Locks and with the same Master Key to pass.

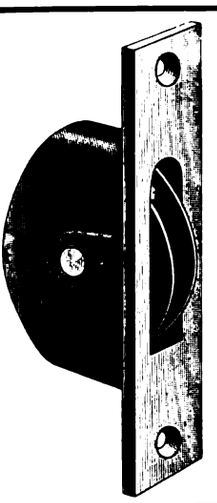
Sargent's Standard Steel Squares

Sargent's Squares are made of the best double-refined Steel and on improved machinery of delicate adjustment. The Squares are "true;" they have that "hang" which makes them just right; they are accurately marked and nicely finished. We make Squares for all purposes and with different markings and labor-saving tables and scales, finished in polished steel, nickel plated and royal copper, also blued steel with white and with yellow enameled figures.

Our Squares are well known and have a good reputation among practical men. You should sell them.

SQUARES WITH RAFTER TABLE



The patent Rafter Table shown above gives the measure of the rafter for any one of seven pitches of roof, based upon the length of the horizontal measurement of the building from the centre to the outside. Full description and directions for using the Rafter Table, as well as the other Tables and Scales with which our Squares are marked, may be found in our Square Booklet, a very useful pamphlet which is packed with each Square and which we also furnish to dealers for distribution to mechanics. Let us send you a copy; it will interest you.

SARGENT'S CYLINDER LOCKS

you can depend upon.

They look well, work well and wear well. No better locks are made and you can stand back of every one with the assurance that it will work perfectly and do good service in actual use and give satisfaction to your customer who uses it. Sargent's Easy Spring makes easy-working locks. "Our Little Red Book" tells about it. Send for a copy.

Noiseless Axle Pulleys

should be used for the best work in finishes to match the other hardware.

Our Axle Pulleys (No. 22 series) are made with Iron, Brass and Bronze Face, both Square and Round Corner. They have Iron and Brass Turned Wheels with grooves for Sash Cord, Ribbon and Chain, and are carefully made throughout. We furnish them in plain face and in all the finishes on Iron and Bronze Metal.

These Steel Chest Handles are well liked and the sales are large; they are profitable goods for dealers.

We make three sizes in all the desirable finishes, and also have them ornamented and with different styles of plate. They are very strong. Send for a sample and prices.

On Tuesday morning Mr. H. G. Reynolds, president Reynolds Wire Co., Dixon, Ill., gave an automobile ride to about forty gentlemen and ladies, members of the National Hardware Association.

During the trip they visited the Treasury Department, Bureau of Printing and Engraving, Smithsonian Institute and the National Museum.

WEDNESDAY MORNING SESSION.

NOVEMBER 8TH.

AT "THE ARLINGTON."

President Samuel A. Bigelow called the convention to order at 10.30. He said:

Ladies and Gentlemen, Delegates and Friends—It is a great pleasure to extend to you a warm and hearty welcome to the eleventh annual convention of the National Hardware Association of the United States.

Each year, increased attendance shows the growing interests in our work. The feature of our meetings that we like most to cultivate is bearing good fruit, for never before have the ladies outnumbered the present attendance. We appreciate their continued interest in our work.

Assembled here in the capital of our country, are representatives from nearly every State in the Union, as well as from our sister State across the Canadian border. We are here to cement

ARLINGTON HOTEL, WASHINGTON, D. C.

the ties of friendship, brotherly love, to work together for our common welfare. Let us hope that each member will meet many old friends and make new ones and carry home pleasant memories of our Washington meeting.

The convention then joined in singing "America."

The president introduced Rev. D. J. Stafford, D.D., rector of St. Patrick's Church, Washington, who invoked the Divine blessing in the following words:

"In the name of the Father, Son and Holy Ghost, Amen. Almighty and Everlasting God, Father of all nations, we lift our hearts in gratitude to Thee this morning. We thank Thee for our great prosperity, for the national resources of our great country and for all that marvelous progress wherewith Thou hast blessed with bountiful harvests all the nations of the world.

Grant us, Father, Thy protection, to direct us in the ways of prosperity and to bless us in the days of our happiness, as Thou dost bless us in the days of our troubles, in the days of our misery. Give us to understand that righteousness exalts a people and that to abide in the way of Your commands is the best security for future prosperity and future greatness, and that in our dealing with one another, we will as in our dealings with the nations of the world, we may always remember to give just measure and absolute justice to every individual and to every nation with whom we have dealings that we may always be faithful to Thee, and that we may understand that morality and honesty are the things upon which national prosperity depends and the surest guaranty for the future of this great country; that in all things we may glorify Thee and bless Thee through Jesus Christ our Lord.

Our Father who are in heaven, hallowed by Thy name, Thy Kingdom come, Thy will be done, on earth as it is in Heaven, give us this day our daily bread, and forgive us our trespasses as we forgive those who trespass against us. Lead us not into temptation, for Thine is the Kingdom, and the Power, and Glory, for ever and ever, Amen.

The blessing of God, the Father and Son, and the Holy Ghost descend upon this convention and inspire you in your deliberations and in building up business integrity amongst all the States of our great nation."

T. JAMES FERNLEY.
SECRETARY-TREASURER.

Mr. Bigelow moved that Mr. Van Newkirk be elected General Secretary during the session of the convention.

The motion was seconded and carried.

On motion J. J. McCaffrey was elected Railroad Secretary during the sessions.

President Bigelow then read his annual address, which was as follows:

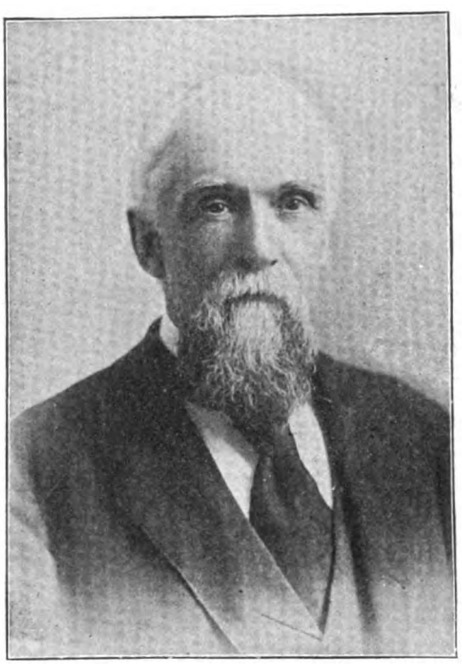
W. W. SUPPLEE.
OF ADVISORY BOARD.

THE PRESIDENT'S ANNUAL ADDRESS.

By SAMUEL A. BIGELOW.

What more fit place to hold our Eleventh Annual Convention than in the capitol of our country?

Digitized by Google



What better time than in the closing months of a most eventful year, which has brought peace to two great nations, through the personal effort of our beloved President (Theodore Roosevelt)?

With armies of half a million men, veterans who had fought the fiercest battles recorded in history, each confident and anxious to renew the conflict, neither was willing to suggest a settlement.

These were the conditions existing when he proposed a conference to arrange terms for peace. The world looked upon the realization of his suggestion as an impossibility.

His position as President of a great nation, free from the petty jealousies and self-interest of all other countries added to his known honesty of purpose, eminently fitted him to accomplish this most difficult undertaking.

The sequel to this great triumph is now being developed in Russia, where it promises to

R. A. KIRK.
OF ADVISORY BOARD.

GIVE NEW LIFE AND LIBERTY TO MILLIONS

of people who have been downtrodden for hundreds of years.

Let us rejoice that our President has been the chosen saviour to relieve all this distress and suffering, and that God has given him the power and strength of will to accomplish those great results.

In offering our tribute, I believe we can all subscribe to Secretary Morton's estimate of the man, whose honest integrity and indomitable will have enabled him to accomplish so much good for all mankind, and placed our country in the proud position of peacemaker for all the world.

He is, taken all in all, one of the most remarkable of all the great men who have occupied the White House. As

EARNEST IN HIS LOVE OF COUNTRY AS WASHINGTON,

as far-seeing as Jefferson, as courageous as Jackson, and as much opposed to human slavery in all forms as Abraham Lincoln, he stands robust in his integrity, and sturdy in his determination that there shall be a square deal all around.

Let his example guide us in the work of our convention.

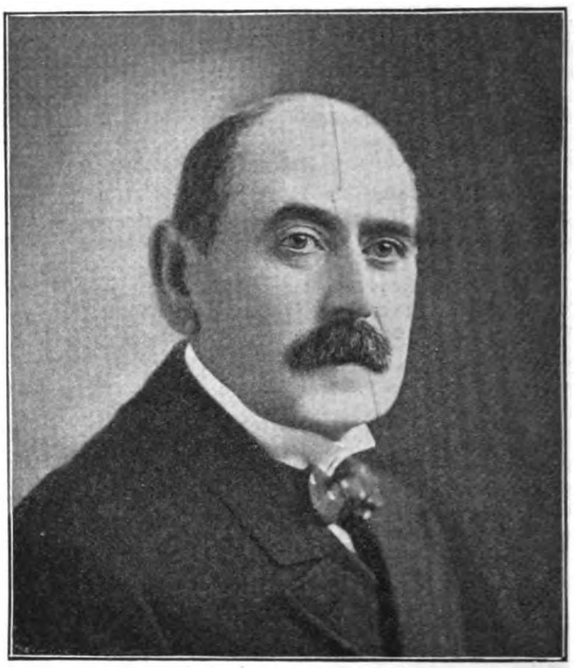
A year ago we were on the threshold of the second great outburst of American Industrial Expansion. To-day we are in its midst.

Looking about us, we find

LABOR OF EVERY CONDITION FULLY EMPLOYED—

our factories are all working and producing a larger output than was ever known before.

Pig Iron, the base metal from which all Hardware products are made, was never in greater demand, many furnaces have withdrawn from the market, having sold their entire product for the first quarter of the coming year.



All classes of buyers are still in the market, and all grades of Iron are in demand. Notwithstanding the advanced prices, buyers are seeking to make contracts extending far into next year, but few furnaces are willing to sell beyond April next.

Consumption at the present has reached marvelous proportions. Prices have already advanced over $3.00 per ton in the past year. Coke, also an important factor in the reduction of Pig Iron to the finished products, is in active demand at higher prices. Ovens are heavily over-sold and high premiums are being paid for prompt delivery.

BOUNTIFUL HARVESTS HAVE REWARDED THE FARM LABORERS

in every section of this great country. A high level of prices, both for farm products and for manufactured material, is increasing the fabulous wealth of our country with rapid strides.

A report from this city in September gives these facts regarding the country's crops in 1905:

JOHN BINDLEY.
OF ADVISORY BOARD.

"The value of the farm products raised in the United States in 1905 will equal approximately the total value of all the gold mined in the last thirty years.

"While the backbone of agricultural prosperity is represented by the three great speculative crops, wheat, corn and cotton, other products swell the total by many hundreds of millions of

H. H. BISHOP,
EX-PRESIDENT.

dollars. For example, the American hen lays $145,000,000 worth of eggs per year, but it is worth about as much as the wheat crop, and more than the cotton crop.

"In 1870 the country produced 287,000,000 bushels of wheat for a population of 38,500,000. This year it will produce 700,000,000 bushels for a population of 83,000,000.

"The wheat crop would require 24,640 trains of 40 cars each to move it, more than half of the freight cars in the entire country The 5,737,000 farms in the country are valued at more than $20,000,000,000, and gross value of crops raised in 1899 was $4,717,-

Digitized by Google

000,000, or 20 per cent. gross income. And yet the average return per farm is but $800.

"THE DISTRIBUTION OF THE CROPS IS THE MARVEL OF THE WORLD. To-day a million freight cars are hurrying the crops over 300,000 miles of railway to the seaboard, and to the various distributing points to feed our people.

"The 2,716,000,000 bushels of corn would occupy approximately equivalent to 3,380,000,000 cubic feet if closely packed, or space enough to cover the entire site of the 'city' of London to a depth of 100 feet."

Two years ago Benner prophesied the conditions as they now exist in 1905 and promised they should continue until 1911. Surely, we should be thankful that we can share in this great prosperity.

For four months our brothers in the South have been called on to fight a terrible plague, which has paralyzed business, and brought sorrow and suffering to its people.

WITH TRUE AMERICAN PLUCK AND ENERGY they have fought a bitter fight against a subtle foe and, thank God, they have won. Let us hope they have done their work so well they may never be called upon to renew this terrible struggle again. To-day they are free to pursue their paths in peace, and share in the general welfare.

Never before in the history of our country was there a brighter outlook for the industrial and commercial interests than exist to-day. During the past year your executive officers have labored diligently on the lines laid down by you at our last convention. The report of the various committees will give you the detail of their work and their recommendations should receive your careful attention and loyal support.

You will be called upon to discuss and advise your officers and committees on many vital and important matters.

OUR INTERCOURSE WITH MANUFACTURERS HAS BEEN MOST CORDIAL. Our membership was never larger or more united than it is to-day. The benefits from our association are increasing each year. Our customers, the retail dealers, appreciate our support and honest desire to improve the conditions that menace them. Intelligent, broad-minded men govern their councils and use their influence to promote cordial relations with their jobbing friends.

In the two years your president has occupied that honorable position he wishes to thank the members of your Executive Committee and your secretary and all the members for their most loyal support.

No member ever refused to accept a committee appointment or to do any work assigned to him. His years spent in your service and his many warm friends

WILL EVER BRING BACK PLEASANT MEMORIES, but none that he treasures more highly than the many kind and loving messages he received on his golden business anniversary.

COL. R. M. DUDLEY,
OF EXECUTIVE COMMITTEE.

Members will rise while we read the names of those of our number who have joined the Great Majority since our last meeting:

HENRY W. MILLAR,
Of Chas. Millar & Sons Co.,
Utica, N. Y.

June ——, 1905. Mr. Millar had been identified with the commercial interests of his city for a number of years, and had the confidence and respect of the entire community.

EDMUND ORGILL,
Of Orgill Bros. & Co.,
Memphis, Tenn.

Died in September, 1905, in the 81st year of his age. For fifty-one years he was identified with the Hardware interests of that city. Was a man of high character and bequeathed to his family an untarnished name.

J. D. MOORE,
OF EXECUTIVE COMMITTEE.

FRED. HINDS,
Of Babcock, Hinds & Underwood,
Binghamton, N. Y.

May 5th, 1905. A young man who gave promise of great usefulness, esteemed by his friends and loved by his family.

DOSITHE P. PATENAUDE,
Of A. M. Holter Hardware Co.,
Helena, Mont.

Died May 3d, 1905. In Southern California, where he had gone in the hope that his health might be restored. He was generally in attendance at our conventions and took a great interest in association work. He will be missed by many friends.

WM. C. PETERAM,
James M. Vance & Co.,
Philadelphia.

Died January 15th, 1905. An honorable, conscientious, old-time merchant, noted for dealing justly with his fellow-men, and taking great interest up to the time of his death in the uplifting of mankind.

JAMES N. FRYE,
Of Frye Phipps & Co.,
Boston, Mass.

Died Dec. 5th, 1905, in the 76th year of his age. He was a successful merchant and a courtly, honorable gentleman, dearly beloved by hosts of friends.

Secretary-Treasurer T. James Fernley made the following report:

THE SECRETARY-TREASURER'S ANNUAL REPORT.

By T. JAMES FERNLEY.

Again, and for the eleventh time, it is our privilege to come before you with a report of the conduct of the work entrusted to your humble servant. We will not attempt at this time to give a detailed account of the work of the year, but following the custom will, during the three days of our convention report in detail regarding correspondence and conferences, as questions may arise during discussions.

During the year, we have visited nearly all the members of our association excepting those in the extreme west. The members of our association have all expressed themselves as being well pleased with the work that is being accomplished by our organization. We have whenever possible during the year attended meetings of sectional and state associations. Among others

Digitized by Google

visited being the Southern Hardware Jobbers' Association, New York State Hardware Jobbers' Association, and the Missouri River Hardware Jobbers' Association. We have been in constant communication during the year with all sectional and local Associations and have been benefited thereby.

One hundred and twenty-eight houses have signified their intention of having one or more representatives present at this convention. This is a larger number than has ever been present on any previous occasion, and this would indicate that the interest in the work of our organization is stronger than ever. Quite 70% of the membership will answer to roll call. Considering that the organization covers the entire country, and that about 10% of our members are located in the Pacific Coast States, we feel that the attendance at this convention indicates in no uncertain manner the strength of the organization.

RELATIONS WITH RETAIL TRADE.

We are very much pleased to report that the retail merchants of the country have built up a very strong organization, and that to-day the National Retail Hardware Association of the United States is a truly representative body. The officers of this association and our own are on very friendly terms indeed, and we are co-operating to the extent of our ability in our efforts to improve existing conditions.

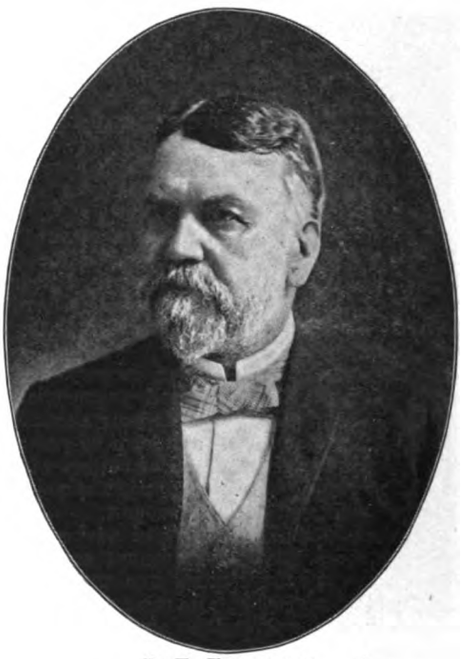
CATALOGUE HOUSE COMPETITION.

A very large portion of the work of the Secretary-Treasurer during the year has been devoted to his duty as General Secretary of the Wholesale & Retail Hardware Joint Committee, and it is very pleasing indeed to be able to report that our labors in this connection have been crowned with considerable success. Inasmuch as this is a subject which will be discussed at our meetings we will not go into detail.

RURAL MAIL DELIVERY.

Our attention was called through the column of the *Iron Age* on September 21st, to the order of the Fourth Assistant Postmaster General, providing for the numbering of rural free delivery boxes, and the delivery of mail to the patrons of the rural routes when addressed by number.

We immediately wired the Postmaster General, protesting against the order, and asking for its immediate rescinding. We also communicated promptly with the members of our organization, and with the secretaries of the various commercial Clubs



Geo. B. Logan,
CHAIRMAM MEMBERSHIP COMMITTEE.

throughout the country, asking them to take similar action. We were very much gratified indeed at the responses received, and as a result of concerted action from the various commercial channels, the order has been suspended. It is still necessary to be vigilant concerning this matter.

We would also call the attention of the members of our Association to the importance of the necessity of carefully watching legislation in connection with the enactment of a Parcel Post Bill. We find that a very large number of the members of Congress are in favor of the passage of such a bill, and it can only be prevented by a systematic and active opposition.

ONE CENT LETTER POSTAGE.

During the year a very large number of manufacturers have sought our assistance in connection with their efforts to meet the views of the jobbing trade. We have been freely consulted regarding the classification of the trade, and at all times have endeavored to be fair and impartial in suggestions made to manufacturers. As a rule, we find that those who are attempting to be

B. F. Eshleman,
OF MEMBERSHIP COMMITTEE.

classed as jobbers, and who are not entitled to jobbing consideration are not legitimate Retail Merchants, but are a type of concerns doing a general merchandizing business, and who are jobbing other lines of goods simply using "Hardware" as a side line. We feel that our efforts in connection with the classification of the trade are as much to the interest of the Retailer as to the Jobber.

FINANCIAL CONDITION.

Our financial report will show that our treasury is in a prosperous condition notwithstanding the fact that we have had some unusual expenses this year in connection with our Catalogue House work.

The Standing Committees of the association have given very faithful attention to all correspondence placed in their hands. The Executive Committee without any exception have manifested a desire to so guide the work of the association that the interests of all the members should be properly protected. Our President has been in constant correspondence with the Secretary of the association, and has generously given his time and talent in connection with our work.

The Secretary-Treasurer desires to thank the association for confidence reposed in him, and to express a hope that this Eleventh Annual Convention will be the most successful ever held.

It was moved and carried that the reports of the President and Secretary-Treasurer be accepted and placed on file.

Secretary Fernley announced the future programme as to social features outlined by the Entertainment Committee.

Rill-call showed a large attendance of delegates.

The President introduced C. A. Birge, ex-President of the Canadian Manufacturers' Association, who made the following remarks:

Mr. President, Ladies and Gentlemen, Members of the National Hardware Association and Members of the American Manufacturers' Association of the United States—It gives me a great deal of pleasure to say just a word or two to you this morning. I shall not take up your time, because I know you have a lot before you. I am unexpectedly called upon this morning.

I am not here representing anybody but myself, in a way. The Canadian Hardware Association has sent a representative here, who, I believe, will speak to you later on, but I am here on their invitation as a manufacturer of Canada. The invitation has come to me year after year through the Secretary of the Association up there, yet, this is the first time that I have been able to avail myself of it.

I do not feel as a stranger amongst you entirely, because I am to some extent an American. I am not an American, but I am a

Digitized by Google

real Canadian, but my father was born in the good, old State of Connecticut, consequently I have a warm heart and a warm corner in my heart for anything that belongs to the United States, its people, its government, and everything else.

I bring to you, while not a representative—not officially representing the manufacturers of Canada, or the iron manufacturers of Canada, but I believe I am personally safe in saying that the gentlemen here representing the Canadian Wholesale Hardware Association will bear me out in bringing greetings

James H. Ritter.
of entertainment committee.

from the Canadian Manufacturers of Hardware to the National Hardware Association—the buyers of Hardware; they are very important to us as manufacturers. We like you very much, but we like you on this side of the line. You have got such a very high wall around your garden that the only way we can get to look over it at all is to go through the gate, and we cannot bring anything with us. Our wall is not quite so high as yours, but we are hoping to have it higher; we are hoping to have it somewhere along the line of your own (applause), not as a retaliatory measure at all, but for the purpose of building up in Canada our nation as you in the United States have built up yours, under the policy of protection.

We admire the people of the United States and our admiration has been wonderfully increased during the last few weeks by the action of your noble President—and uncrowned King—who reached out his hand to two of the rulers of nations on the earth, and said, Gentlemen, it is time for peace. Our admiration was further called out by the fact that the reaching out of his hand in that manner resulted in peace—results which I question if any other ruler on the face of the earth could have brought about. (Applause.)

The United States stands in a peculiar position in that respect. You are in position to do that thing, because you are not entangled so much with foreign policies as the European nations.

Let me again offer greetings as a Canadian manufacturer and my good wishes for the success of your convention and for your success commercially, nationally, and personally. I thank you, gentlemen.

Secretary Fernley then introduced to the Association the representatives of the Canadian Hardware Association.

President Bigelow announced that the next thing before the convention was the discussion of the Catalogue House Question. He introduced Mr. S. Norvell, of St. Louis, chairman of the Catalogue House Committee.

S. NORVELL.

Mr. Norvell said:

Mr Chairman, Ladies and Gentlemen—In our handling of this Catalogue House question to-day we are going to try to get away from dealing in platitudes. We find that a good many people are talking of the Catalogue House subject and when we get down to facts we find they are saying what somebody else has told them; they don't know what they are talking about from the actual facts. They are dealing in impressions, and our effort to-day will be to cut out oratory, even if we were capable of being orators, and to deal in some cold facts. In order that there may be no question about the facts that we will present, we will produce here stereopticon photographs of the pages of the last two catalogues issued. We are not dealing in ancient history, therefore we are not producing any photographs of old catalogues, with one exception. They are catalogues issued within the last sixty days.

On my way to Washington I had the pleasure of stopping in Pittsburgh and there I was invited out to a home of a prominent official connected with the Manufacturers' Association. He had heard me "orate" on a number of occasions. At the supper table his young daughter said she would like to know about this Catalogue House question. I warned her of what it meant to get me started upon that subject, but with the courage of childhood and ignorance she persisted. So after dinner we sat by the grate and in an A B C manner I told this young lady what this Catalogue House Question meant, and the official of the association afterwards told me I converted him, as he had never understood the matter as clearly as he did in this A B C talk.

Now, to boil the matter down. For generations it has been the custom in this country for the manufacturers to sell goods to the jobber, for the jobber to sell the retail dealer, and for the retail dealer to sell the consumer. That system has built up in a large measure the prosperity of this country. It has developed our business men. Nowhere in the world has there been the opportunities that there have been in this country for the man who started with nothing in a few years to become the proprietor himself. That condition, if Catalogue Houses are permitted to increase and to continue what they are already doing, will largely pass away, because it will limit individual opportunity. Benjamin Franklin, one of our wisest men, stated that that government was the best government which gave the largest number of men an opportunity to raise their families in comfort and respectability. We claim that the Catalogue System is absolutely against that proposition. It means a few very wealthy and hundreds of underpaid employees. The President of the

James S. Bonbright.
of entertainment committee.

United States in his last message to Congress said that the well being of this country depended upon the welfare of the artisan, the laborer, and especially upon the well being of the small merchant, and, while business enterprise was to be commended, he saw one of the evils of the times in the gathering together of immense amounts of capital and great numbers of people in a few concerns in the large cities of this country. I think we can claim that President Roosevelt is a pretty good anti-Catalogue House man.

Now, the figures that we will present to-day have been compiled not by jobbers, but by retail merchants from their own invoices. The gentlemen you will hear are active retail merchants.

Now I will first call upon E. M. Bush, of Evansville, Ind., vice-chairman of the Joint Committee on the Catalogue House Question, and also Vice-President of the National Retail Hardware Association.

Digitized by Google

Mr. Bush addressed the convention and said:

E. M. BUSH.

Mr. President, Gentlemen—As one of the representatives of the retail Hardware interests, and a member of the Joint Committee, I am glad of this opportunity to meet with you and discuss the burning question of Catalogue Houses.

The worthy and honored President of our National Retail Organization, our National Secretary, the chairman of the Joint Committee and other official sources and the discussion of this

JOHN DONNAN.
OF FRATERNAL RELATIONS COMMITTEE.

matter in the trade press, have left me no new arguments to bring to you, nor would the ten minutes allotted to me permit of logical presentation. My idea is that we have for a short time a heart to heart talk about the matter.

A CONDITION, NOT A THEORY.

May I ask how many of you, gentlemen, you manufacturers, have, like the retailers, taken one of these catalogues home and gone carefully through it, noting their prices and the goods of your manufacture that they illustrate and sell? You know what the Catalogue House has paid for them, you know what the jobber has paid for them, and you also know what the jobber is expected or required to get for them from the retailer. I want to say, and I base my knowledge upon well established facts, that a retailer who pays rent, and himself a salary, cannot do business under 20%. Remember, that the volume of business done by retailers does not run into the millions or even hundreds of thousands of dollars as does your business. Sales of $30,000 to $40,000 a year for a retailer is a very fair business; 20% of the first amount is $6,000; of the latter, $8,000. An attempt to pay freight, drayage, taxes, rent, insurance, advertising, donations to all sorts of enterprises, stenographer, clerk hire, bookkeeper, collector, etc., and to yourself a moderate salary out of this, will quickly convince you that I have made no misrepresentation as to our cost of doing business. Knowing, then, that it costs the retailer not one per cent. less than twenty to do business, seeing how little margin there is upon your goods for the retailer, if he meets the price, which we are having to do more and more all the time, have you not wondered how he can do it and meet his obligations? We are up against a condition, not a theory, gentleman.

We retailers have no means of knowing the cost of manufacture, but we have the intelligence to judge of relative values, and we know that the manufacturer, except, perhaps, when the volume of business runs into millions, cannot make money where his products are sold above the actual cost of production, counting nothing for marketing same, wear and care of machinery, salaries, rent, taxes, insurance, etc., for the profit there is for the retailer if he meets the cataloguers' prices, and, if you cannot do this with your volume of business, should the retailer be expected to grow rich and opulent upon his?

RURAL FREE DELIVERY A FACTOR.

Let me assure you that these conditions are in very generous circulation throughout the entire country, and the only reason they are not in the hands of practically every rural household, at least, is because the cataloguers do not yet know all rural names, but are moving heaven and earth to know them, and I fear some postal department official will contrive some way to reach them all. For instance, the recent order that was issued

NUMBERED RURAL MAIL BOXES.

by the postal department that mail be delivered upon rural routes by numbers only, and, while we have succeeded in having this part of the order held up, the department still insists upon mail boxes being numbered—to my mind a most foolish proposition—for before the numbering is completed upon a rural route, some new family moves in or builds upon it and what will its number be? In order to keep intact the numbering of these routes, will the next official ruling be that no farm upon the route can be subdivided and built upon, and that every newcomer must settle at the end of the route and so obtain a number not pre-empted. Why is numbering insisted upon? Does something lie behind it?

CATALOGUE HOUSE QUESTION NOT A THEORY, BUT A CONDITION.

Allow the present deplorable and unprofitable condition brought about by Catalogue Houses to continue at the expense of the retailer and you, gentlemen, face not a theory, but a condition, serious to yourself and the country, when these houses become so numerous and strong by syndicating that they can dictate to you the prices they will pay for goods or start factories one or the other must eventually prevail—will bring the greatest output for factories, and which system will tend to produce of their own. Let us consider for a moment which system—for the highest grade articles.

The Catalogue House illustrates your wares with small, indifferent cuts, setting forth their virtues in a size type that requires a reading glass to decipher, and depends upon cut prices to market these wares, and a cut price inevitably cheapens merchandise.

AFFECTS TRADE, CITY AND COUNTRY PRESS.

If the retailer is supplanted by the cataloguer, with him goes the trade press and a large proportion of the city and country press, for the retailer is the direct support of the latter and the trade press receives its support from the manufacturer, who uses its papers to reach the retailer. No retailers, no trade press.

The retailer, besides advertising your wares in his local papers, displays them in show windows and well arranged stores,

COL. JAMES R. NUTTING.
CHAIRMAN PRESS COMMITTEE.

calling attention to their merits through progressive, wide-awake salesmen, whose end is to create the desire for possession. Who knows better than yourself that seeing an article creates the desire for it? How often have you in reading advertisements in magazines resolved to send for that article and never carried your resolve into execution? But, see in a show window something you desire, you step in and possess it, and so with other members of our household. The retailer's desire is to sell the best and most profitable line, avoiding investing in and talking inferior, cut-price goods. Hence, gentlemen, I claim that support-

SUPPORT THE RETAILER.

ing the retailers in this fight you are helping to win your own battle, having in him an influence always at work to create a demand for more goods, and from him comes a more constant demand for better goods that bring a good profit.

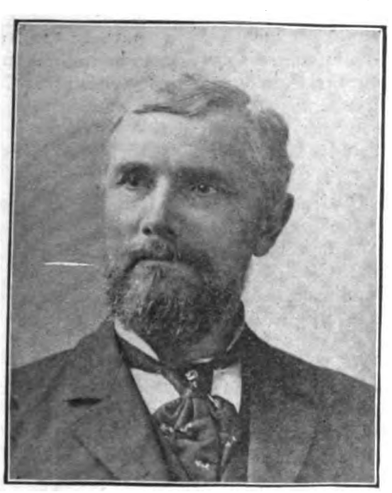
Digitized by Google

I attribute the demand there is now for cheap and inferior goods to the influence of the cataloguers, "Ten-cent racket" and Department Stores, which are forever beating down the price, and looking for "leaders" that bane and curse of commercial life of to-day. If the change from the "deserved creating" to the "vision destroying" system is brought about, it will be much easier for the retailer, with comparatively small investments, to change his vocation than for manufacturers to adjust themselves to conditions that will be irksome, to say the least, or have for competitors the syndicate of mail order houses, with factories of their own, which will surely be the development of that system.

"A SQUARE DEAL."

We appeal to you not as servants, worthy of their hire, but to all the dignity of free-born American manhood, as men who believe in "a square deal," and who do not believe we are receiving a square deal, when after investing in, displaying and talking the quality and merits of your wares and assisting in making them household words in American homes, you manufacturers sell to, or permit to be sold by cataloguers, these wares which are used by them to knife your friends in the back!

In my own place of business there are some tools that have been sold continuously by my predecessor and myself for fifty-two years, long before a Catalogue House was dreamed of, and I am glad to say, gentlemen, I have never seen these tools illustrated, priced or named by any cataloguer.



What possible argument has a retailer with a customer who brings into his store one of these catalogues with a number, size and name of a manufacturer upon an article quoted at a less price than you can possibly sell and even make expenses? I have been up against this very proposition time and time again, and, gentlemen, it made me feel like thirty cents.

RETAILERS APPRECIATIVE.

The retailers in our organizations appreciate the wonderful progress that has been made in this work for the comparison of the latest issues of the cataloguers with those of only two years ago, show that many prominent manufacturers, who were greatly in evidence then, have now disappeared, and, we believe, forever, from these pages.

There is an old Arabic prayer of good wishes: "May your shadows never grow less," and I give it to you heartily, but may the name of every one of you vanish in like manner as have these other names of whom I speak from off the pages of every catalogue in the country, for only then will the retailer come into his own again.

At the close of Mr. Bush's remarks Mr. Norvell, introduced S.

C. B. LOCKWOOD,
OF PRESS COMMITTEE.

R. Miles, of Mason City, Iowa, a member of the Executive Committee of the National Retail Hardware Association.

S. H. MILES.

Mr. Miles said:

Mr. President and Gentlemen—I thank you for this opportunity to present, as a member of the Wholesale and Retail Joint Committee, some phases of this Catalogue House question from a retailer's point of view. In a great deal of discussion of this question it seems to me the retailer himself has not been taken into consideration, and that he has been criticised by those having little knowledge of the subject or people they have been wont to discuss. Such criticism is not only unfair, but unjust, and, instead of bringing the three interested parties to this discussion, namely, the manufacturer, the jobber and the retailer, into close and more friendly relationship, so far as the retailer is concerned,

"PUT YOURSELVES INTO THE OTHER FELLOW'S SHOES."

it has had exactly the opposite effect. I would like you this morning, if you can, to place yourselves in the position of retail Hardware merchants, forgetting, for a time, your own ideas on this subject, and considering the question from a retailer's point of view. It has been said, and with reason, that a single fact is worth a cartload of arguments, and I shall try to refrain from dealing in glittering generalities of which, it seems to me, we have had quite enough in the discussion of this subject, and to confine myself to facts as best I may. If my presentation of this question this morning is in an argumentative way, kindly attribute it to the habit necessarily acquired by a retail salesman of presenting facts in this way, rather than any desire on my part

W. S. WRIGHT,
OF EXECUTIVE COMMITTEE.

to take up your time with more argument. There will be presented during this session a number of facts and figures in a way that must be more convincing than anything I can say to you, and in a more comprehensive way than I believe the same facts and figures could be represented by any other method. With a knowledge of what is coming later, I will only call your attention to two or three matters, having a bearing on the subject under discussion, that I think may not be touched upon later.

NOT A LOCAL CONDITION.

One of the questions frequently asked by those not familiar with the subject is: Is this Catalogue House question general or local, or does it exist largely in the imagination of the retail merchants? To be able to answer this question fully and intelligently, on October 20th I caused to be mailed out through the secretaries of a number of Hardware associations a circular letter in which I enumerated thirty-two lines very generally carried in stock by the retail Hardware merchants of the country, requesting the merchants receiving them to check the various items on the lists on which they were most frequently called on to meet the Catalogue House price. While I knew something of the extent of the territory covered by the two prominent Catalogue Houses, I was very much surprised, on checking replies received, to note that they were from Minnesota on the North to Texas on the South; Massachusetts on the East to Washington on the West; and was still further surprised to find more items checked on the same number of replies on the lists from Washington and Connecticut than from Wisconsin and Iowa. In this connection I will give you a few of the prominent lines indicated, simply giving you the percentage as to the whole number of replies received.

Ammunition	60%
Builders' Hardware	60%
Cutlery	30%
Hay Tools	50%
Poultry Fence	55%
Sporting Goods	70%
Blacksmith tools and supplies	60%
Cream Separators	40%
Guns	93%
Mechanics' Tools	80%
Sewing Machines	60%
Stoves	85%
Tin and Enameled Ware	40%
Washing Machines	50%

The point I desire to bring out by this comparison is: What avenue of escape is there left open for the retailer if he is obliged to meet the Catalogue House price on thirty-two different lines of goods carried by him? May I ask what lines are left open to him on which he can hope to redeem his business and make it profitable? There is but one reason why a Boston

Digitized by Google

jobber can go to Iowa and sell his wares; that one reason is simply price.

PRICE THE REASON.

That same reason—price—is the real and only foundation upon which the Catalogue House of to-day is able to build and maintain its business. The same weapon placed in the hands of the retail Hardware merchant, or taken from the Catalogue House, would go a long ways toward the solution of this troublesome problem. "Do it now" is a trite saying in very common use to-day, and the retail Hardware merchants of the country are saying to the manufacturers to-day, not to a single manufacturer, but as to one man, "Do it now." Cut the Catalogue House off your list. If it result in a still further slaughter of prices, let it come. We are ready for the fray. As you must be convinced before this session closes we cannot now profitably meet catalogues prices; and their inability to secure standard, well-known brands, of Hardware through legitimate and regular channels will injure all far more than a still further slaughter of prices will injure the retail merchant.

We have sometimes heard the great growth and present business of Catalogue Houses charged up to excessive profits demanded by the retailer, this profit sometimes even amounting to graft. Among other duties assigned me as a member of this Committee, one was to tabulate a list covering certain lines of Hardware for use at this meeting.

A COMPARISON.

The task became such an interesting one that I did not confine myself to the lines assigned me, but made up a list of more than 150 items, covering pretty generally the various lines carried by the average retailer. A number of these items were figured by discount, but 122 of them were figured net, either by a single piece, dozen or gross. I find these 122 items would cost the dealer $158.94, against the Catalogue prices of the same items of $150.08. Now, if this list of goods were sold by the merchant at his exact cost, without freight or even the Catalogue house, one small percentage of profit added, it would pay him a gross profit of $1.14 or about ¾ of one per cent. Speaking of graft, this is certainly an example. Now if you will add to the merchant's cost 5% to cover freight and cartage, and 20% for the cost of doinfi business; making a total of 25% and deduct from this his excessive profit of ¾ of one percent, you have a difference and an actual loss of 24¼%. Considering yourself in a retailer's shoes how do you like it? But you may see any dealer that will pay the prices used in this schedule is not entitled to consideration. I will furnish any jobber or manufacturer in this room or out of it a copy of the items and prices used in making this comparison, and, if you will agree to supply the same goods at a material saving in cost to the retailer, I will undertake to put them in touch with a volume of business that will prove very gratifying both in quality and quantity. Making this comparison was not in my mind when making up this schedule. It was suggested as the work progressed. And prices used are those at which any live retailer, Hardware merchant can purchase the goods enumerated. But I have every reason to know that the prices used are lower than are being made to the average dealer, either by the jobber or by the manufacturer; making the comparison from the standpoint of the average retail merchant a still more aggravated one.

Occasionally some writer for the trade press solemnly and wisely informs us that business conditions have changed, and that the manufacturer must go direct to the retailer, if not to the consumer, to market his products.

SOME INTERESTING FIGURES.

In this connection I have compiled some figures that I think will prove interesting. In making up these figures I requested a jobber, selling southern trade, one selling eastern trade, and a local Iowa jobber, to send me a few copies of orders just as they received them from their customers. I made this request without disclosing in full my reasons; but notwithstanding, they responded very promptly, and I think a brief study of these replies will not only prove interesting but instructive. I will give you the State from which the order was sent, the number of items and the number of factories with which it would be necessary to place orders to cover the various items. An order from Texas of 31 items coming from 10 different factories; Louisiana of 20 items from 12 different factories; Missouri of 36 items from 17 different factories; Massachusetts 76 items, 15 factories; Maine 200 items, 34 factories; Iowa 52 items, 17 factories, at a total cost of $50.82, or about $3.00 for each factory order. Iowa 39 items, 19 factories, total $75.95 or less than $4.00 for each factory order. Iowa 53 items, 27 factories, $74.08, or about $2.75 for each factory order.

While orders of the size indicated above might be satisfactory to the manufacturer, the placing of 40 orders with as many factories to cover 90 items would not be satisfactory to the retail merchant. I think these figures will serve to show that the retail Hardware trade is not yet ready to go to the manufacturer direct to supply all of their wants; and that there is not only a very wide field of usefulness for the jobber, but a decided reason for his existence on the part of the retailer. Too limited stocks carried by the average retailer is also frequently urged as a reason why the Catalogue Houses have been able to build up their present business. Let us consider for a few moments what it would mean to the retailer to buy a majority of his supplies from the manufacturer. It would mean one or two things: a still more limited assortment or increase in capital invested. It is very much of a question, even if the retail Hardware merchants in many localities were able to, and did, sell every dollar's worth of Hardware in the territory belonging to him, if he would be justified in multiplying his present investment in stock by 2½ which would surely follow were the jobber to be eliminated.

As a patriotic American citizen as well as a retail Hardware merchant, I am proud of the high rank the American Hardware manufacture has attained among the Hardware manufacturers of the world, standing, as he surely does, at the very pinacle. And I congratulate you, gentlemen, on this proud achievement, but, lest you forget, I ask if you will consider for a few brief moments, at least, one element that has made this success possible, and ask yourself if success without the "man behind the gun" the more than 25,000 active, energetic, loyal retail Hardware merchants of the United States, can your success continue without his assistance? If it can, there is little use to continue this discussion. If not, what then? But you say we want and must have the continued assistance and co-operation of the retail Hardware merchant.

WANT OUR NAME ON PAYROLL.

Let us suppose you have had in your employ a man who has been with you for years. This man has been an intelligent, faithful employee; has been an important factor in the successful conduct of your business. You call him into your private office and say to him, "John, you have been in my employ a great many years; I appreciate what you have done for me, and I want you to continue in my employ, but owing to changed business conditions it will be impossible to longer continue your name on the payroll." How long would John stay? The retail Hardware merchant of to-day is John. We care little for words of praise and flattery, what we want is our names on the payroll. Without this you cannot hope to continue to receive that hearty and enthusiastic support that has marked the past, and surely contributed to your success. In the discussing and the handling of this question, the retail Hardware merchant has undoubtedly made some mistakes. But in considering them we ask you to throw about them that same mantle of charity that he has used in considering your attitude on the Catalogue House question. That mantle while new, seems from the viewpoint of some manufacturers at least, to be high enough and broad enough to cover the Catalogue House Question. The mantle of changed conditions.

At the close of Mr. Miles' remarks Mr Norvell proceeded to give his illustrated address on the Catalogue House question.

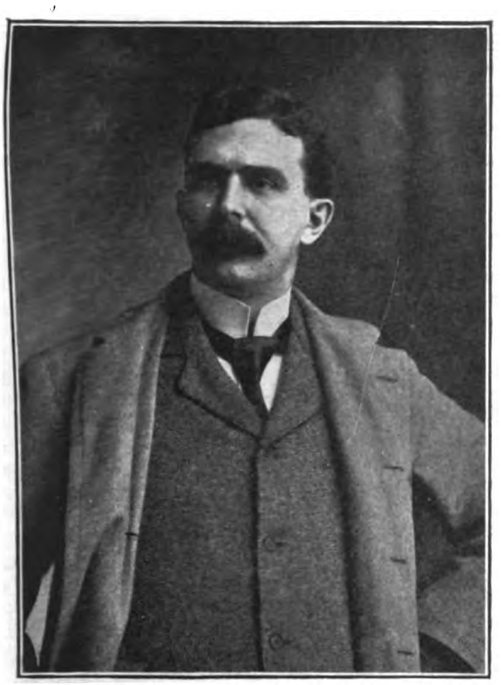
S. NORVELL.

S. Norvell, Chairman of the Catalogue House Committee, then addressed the Convention and said that he had prepared a large number of stereoptican views for the education of the delegates on the Catalogue House Question, which were then shown to the audience. Among the first of them were pictures of the buildings of Sears Roebuck & Co. and Montgomery Ward & Co.

These were followed by photographed pages from the catalogues of these concerns on which the claim was made that the Catalogue House could "undersell anybody on earth."

The balance of this series set forth the saving the Catalogue House could effect for the consumer by sending him his goods direct from manufacturer; the doing away with express charges by "Club Orders," made up among mechanics and farmers, and shipping these "Club Orders" direct to one person by freight; the Banking Department of the Catalogue House which paid as high as 7% on $1,000 deposits; the prize plan which secured for the purchaser of a certain quantity of goods the present of an organ, a gun, a sewing machine, the value of which was equal to a cut of 5% on the goods sold.

Again, the system the Catalogue House employs for the extensive distrubution of its catalogues among farmers, and the commission of 5% it pays to farmers for the collection of orders.



A number of these plates showed cost of goods sold by retailers to consumers as compared with cost of same goods sold by Catalogue House to consumer.

Mr. Norvell, as Chairman of the Catalogue House Committee, said that he had requested twenty-five of the largest jobbers, both Association and independent jobbers, to give an expression of opinion on the Catalogue House question and that out of twenty-five telegrams received, only two had declined to be quoted on the subject, thus showing the unity of opinion of jobbers upon this question.

Digitized by Google

These telegrams, from twenty-five of the largest houses in the U. S., selling Hardware, represented a total capital of twenty-five million dollars, and a total sales in the Hardware line of over one hundred millions, and employing a force of twenty-five hundred travelling men. These telegrams were from all parts of the United States—from Boston, to San Francisco and from St. Paul and Minneapolis to New Orleans, and all of them stated that they did not sell Catalogue Houses and that in their opinion the only cure for this evil is for manufacturers to quit selling them; that they did not believe in the controlling price idea—that is, the manufacturers controlling the Catalogue House price. The great majority of these telegrams stated that both jobbers and retail dealers in purchasing goods should try as far as possible to avoid these lines shown in the catalogues of Catalogue Houses.

A series of arguments or questions prepared by the committee were shown on the screen for the consideration of the Convention which were as follows:

S. NORVELL.

CATALOGUE CATECHISM.

No. 2. If certain manufacturers sold a few jobbers at twenty of twenty per cent over others, would not this be unjust discrimination? Would the Government stand for it?

No. 2. If centain manufacturers sold a few jobbers at twenty per cent lower than the rest of the jobbing trade, how long would their goods be carried by other jobbers?

No. 3. Is not a Catalogue House, selling to customers, a retail dealer?

No. 4. When a manufacturer sells his line of goods to a Catalogue House at twenty per cent less than the retail merchant can buy the same goods, is not this unjust discrimination?

No. 5. Is not the controlling-price theory wrong in principle? Should the Catalogue House enjoy both a jobbing and retail profit?

No. 6. Do not such double profits on certain lines place them in position to do business without profit on other lines?

No. 7. When a manufacturer sells his line to Catalogue Houses upon the controlled-price theory, thus enabling them to allow all the jobber's profit and all the retail merchant's profit, does he not, by affording them this double profit help the Catalogue Houses to carry their warfare, in the form of cut prices, against other manufacturers who have declined to sell them?

No. 8. Have not manufacturers who were sincere and determined in the efforts not to allow Catalogue Houses to obtain their goods through indirect sources, shown it is possible to cut off their supply?

How can a Catalogue House injure itself more than to quote cut prices on lines of goods and then be unable to fill orders?

No. 9. If a manufacturer admits he is afraid Catalogue Houses will cut prices on his goods, therefore he does their bidding, would it not be logical for jobbers to obtain protection from this manufacturer in the same manner?

No. 10. Is not the key to the solution of this Catalogue House question in the hands of the manufacturers?—simply because Catalogue Houses cannot obtain extreme prices on their lines from any other source?

No. 11. Is any jobber to-day, of any standing, selling Catalogue Houses, or can he afford to take the chances of selling them?

No. 12. Do not far-sighted manufacturers realize the profit both jobber and retail merchant can make on their goods, is one of their best assets?

No. 13. When a retail merchant cuts a price, is not the demoralization only local? When a price is cut by a Catalogue House does it not cover the entire country and affect every dealer, regardless of local conditions?

No. 14. Is not the entire Hardware trade of the country, wholesale and retail, a unit in its views on the Catalogue House evil?

No. 15. Is not the only difference of opinion between most manufacturers and all jobbers and retailers, simply a question as to the remedy that should be applied to the evil?

No. 16. The Joint Committee believes the only remedy is to quit selling Catalogue Houses. If there is a better remedy it has not been suggested.

Many people are prepared to criticise who have no suggestions to offer.

No. 17. It is only fair to those manufacturers who have quit selling Catalogue Houses that the entire jobbing trade of the country should know the position, on this question of every manufacturer and jobber in the Hardware, sporting goods and cutlery lines.

Do the manufacturers of Guns and Rifles realize that on account of the competition of Catalogue Houses, small merchants are not stocking their goods? Where formerly good stocks of these goods were carried all over the country, it is now the exception to find a complete stock in any medium-size or small retail store. Merchants tell the jobbers' salesmen there is not enough money in the goods to pay for the investment of stock. They are trying to do business by taking special orders.

It is clearly not to the interest of either manufacturers or jobbers to have retail merchants quit stocking any lines of goods.

It may be interesting to Hardware jobbers to know that the Catalogue Houses are obliterating on those makes that the manufacturers have refused to sell them, the serial numbers on Guns and Rifles they obtain through indirect sources. The manufacturers of such Guns and Rifles are refusing to guarantee or to replace any of their goods on which serial numbers have been obliterated

This information should be given by jobbers to their salesmen.

Some have been of the opinion that this Catalogue House agitation would die out. Some have pursued a nutral policy in the hope that things would blow over. This is a mistaken policy. The retail merchants in a large part of this country are in direct competition with Catalogue Houses every day—they cannot forget this competition, it is constantly impressed upon them.

Therefore, even if this Joint Committee passes away others will rise up to take their place and carry on the fight of an irrepressible conflict. The system of selling goods through jobbers and retail merchants, and through Catalogue Houses, cannot and will not exist in this country side by side.

Every Hardware and sporting goods jobber in this country should see that his buyers have on their desks the catalogue of Montgomery Ward & Company and Sears, Roebuck & Company. He should see that every buyer is thoroughly posted on the lines of goods sold by these Catalogue Houses. He should have his buyers study their prices.

One of the greatest obstacles the Catalogue House Committee has had to overcome on this question, has been the lack of definate knowledge on the part of manufacturers and jobbers, and also editorial writers of trade papers. Many men have expressed their opinions who did not know what they were talking about, and could not tell what was being offered by these Catalogue Houses on the various lines if you asked them.

The Retail Hardware Trade Association should impress upon their members the great importance of their being supplied with these catalogues, so they will know the prices that are being made and the lines of goods being sold by these catalogue houses.

Mr. Norvell stated that the effect of the whole thing was educational, and that this would probably be the last time that the Catalogue question would be discussed in open meeting.

At the close of Mr. Norvell's illustrated address Mr. W. P. Bogardus, of Mt. Vernon, was called upon for a few remarks.

W. P. BOGARDUS.

Mr. Bogardus said: Mr. President and gentlemen, I would like to emphasize one point: If it costs the jobber 15% to handle goods and it costs the retailer 20% to handle goods, now

Digitized by Google

can either one of them live if the Catalogue House buys the goods at the same price that the jobber buys them? To whom will the jobber sell his goods?

Now, we hear a good deal about fair play these days, of equity and justice, and we see the revolution which has gone over the country in the elections of yesterday which indicate that the American people are in favor of fair play and justice to all. Now I must submit to you gentlemen that if you expect 90% of your trade to live, you have got to protect them. If you give the same price to ten per cent of your trade that you give—even less sometimes—than you give to the jobbers, how is the jobber going to sell his goods? and to whom is he going to sell them?

It is utterly impossible for the retail trade of this country to exist unless there is some different arrangement made for the handling of goods and I submit this question to you, gentlemen, as a fair question.

We do not ask any favors. We do not ask any privileges. We simply ask to be treated as your friends, as the distributors of your goods, as the men who finally pass them out to the consumer, and we ask your help, we ask your backing, we ask your counsel and advice in this matter. We have been up against this proposition for twelve solid years. We have never been able to get a solution. We come to you, as friends, as helpers, to help us out of this proposition and to give us some kind of a solution. We are here to-day as friends, not as enemies. We are here to give you suggestions to help build up the trade of this country. It is a trade that caters to the necessities of mankind. There is not a house built, there is not a building of any kind built, but what your manufactured goods have to go into it. Now let's stand together and see if we cannot get a solution that will bring back to the retail trade of this country and to the jobber some measure of the prosperity that they heretofore enjoyed.

Mr. Norvell, the Catalogue House Committee has had their say. We have presented our idea of the case. We leave the issue in your hands.

A recess was then taken of the Convention until two-thirty p. m.

EXECUTIVE SESSION.

WEDNESDAY AFTERNOON.

NOVEMBER 8TH.

The Convention was called to order in Executive Session at 2:30, by President Bigelow.

Reports of the various Committees were called for. The report of the Catalogue House Committee was read and the consideration of same deferred until a later hour.

The report of the Metal Committee was read and referred to that Committee for further consideration at their special meeting.

President Bigelow stated that he had received a telegram from F. P. Dunlop, President of the Southern Hardware Association, stating his inability to be present at the meeting of the Association.

Mr. Palmer stated that he had received a telegram announcing a terrible loss to one of the members of the Association namely, the Moore & Handley Hardware Company of Birmingham and suggested that resolutions of sympathy be prepared.

President Bigelow appointed Mr Palmer and Col. B. F. Eshleman, as a Committee to prepare the proper resolutions.

The report of the Heavy Hardware Committee was read and referred back to that Committee.

The report of the Fraternal Resolutions Committee was read and placed on file.

The report of the Committee on Membership was read and placed on file, with the understanding that it would be taken up later for consideration.

Mr. Bihler of the Transportation Committee presented the report of that Committee. The report was discussed at some length, specially the portion of the report referring to proposed action by Congress giving more power to the Interstate Commerce Commission. After an exchange of views it was moved that the discussion be closed and no action taken on that part of the Committee's report.

The report of the Executive Committee was read. It was moved and carried that the report be accepted and placed on file to be taken up at a later date.

The report of the Catalogue House Committee was again taken up for consideration and on motion the report of the Committee was approved with some slight changes.

President Bigelow announced the names of the Committee on nominations, which were as follows:

Capt. F. Baker, Elmira; George W. Herrick, Boston; Col. B. F. Eshleman, New Orleans; Major T. G. Walther, St. Paul; Hobert Weed, Buffalo; J. P. Balderston, Philadelphia; J. A. Warner, St. Joseph.

No motion the Convention adjourned until ten o'clock the next morning.

WEDNESDAY EVENING.

THE EUCHRE PARTY.

The Progressive Euchre Party was a complete success. Mr. Alex. A. Norton, the official stenographer of the Association was the successful winner of the first prize; a chest of "Oneida Community Silver".

The following is a list of other prizes and their respective doners:

Kampfe Brothers—1 ivory handled shaving set.
E. C. Atkins Co.—6 saws.
Geo. H. Bishop & Co.—2 saws.
The Irwin Auger Bit Co.—Box of auger bits.
Meriden Cutlery Co.—1 cake knife.
Supplee Hardware Co.—1 mower. (Great American)
The Chapin--Stevens Co.—Combination rules and level.
Fayette E. Plumb.—½ doz. artist hammers.
Hopkins & Allen Arm Co.—Shot Gun.
J. Stevens Arms & Tool Co.—1 little Scout Rifle.
American Axe & Tool Co.—1 doz. min. hatchets.
Boss Washing Machine Co.—3 Boss washers.
Charles Parker Co.—Bath room set.
Landers Frary & Clark.—1 Carving set, 1 doz. bread and butter knives, 1 universal coffee Percolator.
Dana Mfg. Co.—2 Dana Mop Wringers.
North Brothers Mfg. Co.—4 American Ice Cream Freezers, 2 Ice Chippers, 1 Yankee Tool Set, 1 Christmas Tree Holder.
Manning Bowman Co.—1 Coffee Percolator, 1 bread mixer.
Warren Mfg. Co.— Desk Cabinet.
Stanley Rule & Level Co.—1 doz. Zig Zag Rules.
Caldwell Mfg. Co.—½ doz. Boucher Adjustable Shaving Glasses.
Geneva Tool Co.—Garden Set.
Withington & Cooley Mfg. Co.—Floral Set.
Iowa Farming Tool Co.—Floral Set.
American Fork & Hoe Co.—Floral Set.
Miller Bros. Cutlery Co.—1 doz. pocket knives.
David Maydole Hammer Co.—½ doz. Maydole Hammers.
Samuel Winslow Skate Co.— 4 Pairs of Skates.
Davis & Cook.—Cook's Patern Level.
Wm. Schollhorn Co.—100 ticket punchers.
Kirk-Latty Mfg. Co.—½ doz. Express wagons.
American Wringer Co.—3 Wringers, ½ doz. Dryers, ½ doz. Toy Wringers.
John Chattillon Bros.—Bath room scales.
Enterprise Mfg Co. of Pa.—1 coffee Mill.
Clyde Cutlery Co.—Hand Painted Lemonade Pitcher.
Bronson-Walton Co.—8 Roasters, Baking Tins, Coffee Mills
Ohio Tool Co.—Iron smooth plane.
McCaffrey File Co.—100 manicure files.
Dover, Mfg. Co.—Asbestos family cabinet, French Set of Dover Asbestos Sad Irons.
Atha Tool Co.—1 doz. Full Polished Hatchets.
Bissell Carpet Sweeper Co.—2 Cases of Bissell Sweepers.
Goodell Pratt Co.—Home Companion Tool Set.
Corbin Cabinet Lock Co.—4 Locks.
Oscar Barnett Tool Co.—Two Combination Knives.

THURSDAY MORNING.

NOVEMBER 9TH.

President Bigelow called the Convention to order at ten thirty.

Secretary-Treasurer Fernley read the report of the financial condition of the Association, which showed same to be in a flourishing condition.

On motion the report was referred to an Auditing Committee appointed by the chair, consisting of Messrs. A. B. Palmer, J. G. Bauer and A. S. Burwell.

The report of the Committee on One Cent Letter Postage was presented and read. The report was as follows:

REPORT OF POSTAGE COMMITTEE.

To the President and Members of the National Hardware Ass'n:

GENTLEMEN—The matter of one-cent letter postage has been taken up by different organizations at various times, but up to the present time none of them seem to have made much progress, and in our opinion only a strong business organization, such as ours will ever accomplish the desired result.

To the members of our association this is a very important matter, and I have no doubt the reduction from two to one cent in letter postage would mean a saving of over $2,000,000 per annum.

Your committee would be aided in their work very much, if the members of this association would advise their Secretary-

Digitized by Google

Treasurer the exact amount of their postage account for the year 1904 to enable your committee to know just what the saving would be to our membership, as a whole. This information, if given to him will not be known in detail to any of the committee, but he will simply give the committee the total amount, so you will not be giving away any inside information of your business, and at the same time will be aiding the committee very greatly.

Your committee realizes that they have no easy problem to solve, but our cause is so just, we have confidence that we will succeed in due time.

Possibly you are aware, that at the present time letter postage, or first class matter, only amounts to about 12% of the total tonnage and contributes 90% of the total revenue, and that the cost of carrying a letter, for which you pay two cents, is less than one quarter of a cent. This being the case, it is unreasonable to ask the Government to carry this letter at one cent, when at that price the profit is over three quarters of a cent?

You, of course, are aware that there is at present a very large deficit in the Post Office Department, which is increasing very rapidly each year, owing to the large amount of second class matter carried at an enormous loss.

Your Committee do not believe it policy at this time to make any attack in this second class postal matter, as we do not want to encourage opposition from that very strong factor, but believe in advocating a just cause and let matters take their course

We presume during the past year most of you have received a circular from a so-called Manufacturers' Association of New York City, advocating one-cent letter postage, and incidentally Parcels Post.

Your committee, aided by your Secretary-Treasurer, have followed up this circular very carefully, and are satisfied it is an underhanded movement in favor of Parcels Post and is a move of the Chicago Catalogue Houses. During our investigations your Secretary-Treasurer received a letter from the Secretary of this so-called Manufacturers' Association, stating over his signature that one-cent letter postage was a secondary matter with them.

During the month of September your Secretary-Treasurer organized in the City of St. Louis an organization of Presidents and Secretaries of Trade Organizations of which he was elected Secretary, and at that meeting they adopted the following resolutoins:

ONE-CENT LETTER POSTAGE.

We recommend that the various Trade Bodies and Commercial Associations throughout the country make strenuous efforts to induce Congress to enact a law providing for one-cent letter postage.

A similar resolution was adopted by the National Druggists Jobbers' Association at their meeting in New York City in October.

In February 1905, the following resolution was adopted by the Indiana Retail Hardware Association.

Resolved, that we strongly urge upon our members the importance of carefully watching legislation on the Parcels Post question. This is a measure which, if ever adopted by the Government, will seriously cripple the interests of the retail merchants of the country. We, therefore, ask that every member of our association use their influence on members of Congress to the end that they shall pledge themselves to vote againts any such measure.

We further urge the adoption of one-cent letter postage. This is a measure that will benefit every citizen of our land and is one which is in favor of the masses and not of the classes.

This resolution has the right ring and should be adopted by every association of every kind throughout the country, and through them sent to each and every member of Congress.

The success of one-cent letter postage means sure death to Parcels Post, and in your committee's opinion is the only way to kill that movement permanently. Your committee believe that they must at once commence active work, and ask you to add to its members by authorizing your President to increase its size, as he may think best.

GEORGE T. MCINTOSH,
Chairman.

The report was accepted and placed on file.

The subject was discussed at some length by the Association, many members urging that earnest attention be given to the subject by the various members towards carrying out the suggestions made in the report.

Mr. Stoddard, the Traffic Manager of the Ammunition Association, was introduced.

Mr. Stoddard addressed the convention as follows:

ADDRESS OF MR. STODDARD.

If you will give me a few moments, I will try to explain to you, as briefly as possible, the restrictions passed by the American Railway Association on the shipping of Ammunition and Loaded Shot Shells; also some facts why the restrictions are uncalled for.

Owing to a number of explosions of Dynamite, Nitro-Glycerine and Blasting Powder, shipped in bulk, which have caused the loss of many lives and the destruction of a large amount of property a few months ago, the American Railway Association appointed a Committee for the purpose of drafting regulations regarding the transportation of high explosives. This Committee had several meetings and at one of their meetings in New York we were invited to appear; at this meeting, I found that they had embraced Ammunition in their report under certain restrictions and I explained to them that Small Ammunition and Loaded Shot Gun Shells were (neither explosive nor dangerous to handle), either in transportation or in store, through fire or otherwise, and to substantiate my statement I gave them evidence of tests that had eben made at one of our factories.

Some of the tests are as follows: A case of Cartridges was shipped to St. Louis by freight and then reshipped East; it was very roughly handled, one side of the case was split open, evidently by a hard fall, while one end was broken through and the contents damaged, either by fall or something being dropped on it. The case was roughly patched, one or two big nails being driven through, right into the Primers and notwithstanding this rough handling none of the Primers exploded.

A case of 500 No. 12 Gauge Smokeless Powder Loaded Shells, regularly loaded and packed, was dropped 25 feet on to an iron floor covered with oak planking. The force of the fall split off the top of the case and started the glued dovetailing in the ends. None of the Shells exploded.

We have instances of several cases that were dropped in like manner from different heights and positions and in none of the cases were the Ammunition exploded. A case of 500 Smokeless Powder Shells, regularly loaded and packed, were placed under a drop hammer, weighing 1500 pounds; the hammer was allowed to fall a distance of two feet. The entire column of Shells was crowded together 2⅜ inches, shortening each Shell nearly half an inch. The anvil was forced up through one end of the case, the top and bottom of the case were split off. None of the Shells exploded. This is the severest test of the effect of general shock to a case of Shells or Ammunition.

A case of 500 Smokeless Powder Shells, regularly loaded and packed, was subjected to a fire and heat from a gas blow-pipe. One side of the case was burned through and badly charred and the Ammunition was penetrated by the flame. The expert conducting the test stood at the side of the case, his hand resting upon it. When the blow pipe was turned off, the fire in the case went out, illustrating that Ammunition will not continue to burn by itself. There was no combustion of contents sufficient to even move the position of the case. All of these tests can be verified by photographs taken at the time.

I also gave them quotations from a large number of letters received from our customers where these goods had been in buildings that were burned, and also offered to take the Committee to any one of our factories, at our expense, and put the Ammunition to any test that they might require to prove that the (goods were perfectly safe to handle) in transportation, and that there was no danger account of fire. The Committee, however, did not see fit to accept our invitation, but claimed that on account of the demands of the public, some restrictions must be laid on Ammunition. As far as I am able to ascertain there has been no complaint from the public regarding Fixed Ammunition or Loaded Shot Shells. The Committee finally modified the regulations, requiring the goods to be marked "handle carefully" and the signing of a certificate to cover each shipment. This, you will understand, applies to all shipments containing Ammunition; any of you in making a shipment of Hardware or other articles may include a few boxes of Cartridges in the case, and you will be compelled to comply with these regulations. It seems to us that it is unwarranted and unjust to ask that any such rules should be applied to this product. In our opinion, if we are required to brand our packages "handle carefully", it will only be a matter of short time when these articles requiring special care (will advance in rate or classification), and so attract the attention of underwriters throughout the country as to make necessary storing in special warehouses under advanced premium rates. It also calls to the attention of the railroad employees and the public in general that we desire our goods handled with care, which is not a fact, as the goods are as safe to handle as Nails, so far as danger from explosion while in transportation or by fire. If there ever has been, during the forty odd years which this commodity has been placed upon the market, a single instance where the article itself had been injured or the surrounding property been injured, by reason of rough handling, collisions, fires, or other disasters, there would be a possible excuse or necessity for the branding of these goods "handle carefully."

Thre has been three tests made in the presence of Fire Chiefs,

Digitized by Google

Insurance Men and Committees appointed for the purpose, one in Chicago, one in New York and one in Duluth, and the reports of these tests have all been favorable. Let me read you a few extracts from the report of the Duluth test.

A test was also made in August of this year in the City of Duluth by members of the International Association of Fire Engineers, then in convention in that city and quite a great deal of ammunition was burned and citizens were invited to be present. A large crowd witnessed the burning. An account of this burning was given in the *Duluth News Tribune*, under the date of Aug. 18. We quote the following extracts from said account:

"When the match was lighted to the oil soaked fuel under dozens of wooden boxes of cartridges, many were leaning against the temporary building which contained enough ammunition to kill every person in Duluth."

"Eager to secure souveniers of the test hundreds of children were packed about the burning shack oblivious of the apparent danger which, if any, was shared with the firemen."

"At the closing of this very lenghty report as published and in which was conclusively shown that there was no danger whatever to any one in a burning building of Ammunition the paper publishes the following statement:

"For years I have been fighting against the story of ammunition in the buildings," said Chief McQuade, "because I though a fireman could not with safety enter a burning structure in which these explosives were kept. I regarded it as extremely dangerous, The test to-day is the best thing I have seen at any of the meetings of the Association and I have attended a great many. I observed carefully that one cartridge may be exploded in a box but it is practically isolated in its section and does not go with force enough to ignite others and that according that a simultaneous explosion of large quantities of ammunition is impossible. A shower of broken glass from over head broken windows is much more dangerous than the explosion of ammunition by fire and the flying of empty shells or bullets which are impalled with scarcely force enough to carry them five feet can do no more harm than scratch a fireman's face."

"This test demonstrated what has often been claimed by the manufacturers of ammunition and which I never believed that the cartridge must be confined in a gun barrel to give it force and speed. I have seen enough to convince me that our firemen if occasion arises, will, when I have explained the result of this test, enter a building where ammunition is on fire as cheerfully as though the structure contained fire-crackers."

"As a result of the success of the demonstration yesterday resolutions will be passed by the Association at the meeting to-day setting forth that there is no danger to firemen, while at work in buildings in which ammunition is stored."

We believe it is for your interest that you take this matter up with the official of the railroad with which you do business, and if possible get them to eliminate the rule requiring these goods to be marked "handle carefully."

We earnestly hope you will give this matter your immediate attention and assure you we will give you all the assistance that is possible by our endeavors to influence railroads against any legislation regarding Small Arms Ammunition.

This question was thoroughly discussed. Recommendations were made by several members that the subject be taken up both generally and locally and influence brought to bear upon the various railroads to modify their present rules in respect to the restrictions imposed in the shipping of fixed ammunition.

The following resolution was adopted in reference to the matter:

"Believing that loaded shells and fixed ammunition are not nigh explosives, we protest against their being so classed by transportation companies and that our Association be instructed to carry out the spirit of the same."

WILLIAM VALLANCE.

President Bigelow introduced WILLIAM VALLANCE, of Hamilton, Ontario, President of the Canadian Wholesale Hardware Association. Mr. Vallance said:

Mr. President and Gentlemen—It affords me a great deal of pleasure on behalf of the Canadian Association to thank you for the very kind invitation extended to our members to visit you. We need counsel; have much to learn; and we know of no gathering in the world where we could learn so much as from the gathering I see before me this morning, composed, as it is, of influential men in the trade of the United States.

We occupy on the map, not a very large space; we are scattered; we have not the solidity that your Association has. The Coast has a small association of its own, Winnipeg has one for Manitoba; and the eastern provinces have one for the maratime provinces and our Association, that we now term it, is composed of representatives from Quebec and Ontario. We have not attained to a universal Association, such as you have, but we hope to progress to it, but owing to our long drawn out settlements, this has not yet been attained. We come here to learn. We cannot teach you anything. We are glad of the opportunity you have afforded us. I thank you gentlemen.

President Bigelow introduced T. H. NEWMAN, Vice-President, from Montreal. Mr. Newman spoke as follows:

T. H. NEWMAN.

Mr. Chairman and gentlemen of the National Hardware Association, I desire to confirm as strongly as I can the thanks so ably expressed by our President for the many courtesies tendered our Association. We have been in existance about seven or eight years. Mr. Fernley, your able Secretary-Treasurer, has paid us two visits. I would like to make a statement—I don't know whether it is proper or not—but we will come no more unless some of the National Association pay our association a visit. We would like to see you at our next annual meeting in October of 1906, possibly to be held either in Toronto or Hamilton, Ontario.

I would like to say just one or two words regarding the cordial, friendly, relationship between the United States and Canada, not only in a friendly way but from a business point of view. We all in Canada do as much trading with the United States—considerably larger—than we do with Great Britain. We are so closely allied to you, the boundary line is so narrow and almost intelligible that our natural desires and inclinations are towards American goods and these have become familiarized to us to a very large extent, and our factories are modeled very much on the same plans that they are in the United States and are developing rapidly.

We in Canada seem to have turned the corner. We have a population of about six millions, progressing rapidly, with unbounded territory and unlimited resources and we look forward to a great future and I think I am safe in predicting that in the next ten or fifteen years Canada will see development undreamed of ten years ago.

I don't think I can add anything to what Mr. Vallance has said and you will be welcome in Canada if you come there and we will do our best to entertain you and hope to see you next October.

The Association then adjourned until ten a. m., Friday morning, 10th inst.

THURSDAY AFTERNOON.

The social feature of the afternoon was a visit by the Association in a body to President Roosevelt at the White House. Several hundred delegates and guests had been furnished with invitation cards and they were admitted into the reception room of the White House. After they had all assembled the doors of the President's room were opened and the President was ushered before the assembly. President Roosevelt greeted the visitors in the following language:

PRESIDENT ROOSEVELT.

"Ladies and Gentlemen—I want to say what a pleasure it is to greet this representative association of American business men here, and when I have said that greeting to the men I want to go a little further and say that I think that the average American is a very good fellow, and the only better fellow I think, is his wife. I want to say that I am glad to greet the gentlemen who are present, but I am more pleased to have the attendance of the ladies. You know I don't say anything I don't mean. When I say the American woman is better than the American man I mean it.

"It is a great deal of pleasure to see you here. This republic has been prosperous chiefly through the extraordinary perfection of our business methods—through the efficiency of our business men, and also through the honesty of our business people, and I am sure that that is absolutely essential for the development of business men, and their success depends not only upon efficiency, but upon absolute honesty in the conduct of our public life in politics and the business world."

On behalf of the visitors, President J. C. Birge, of the American Hardware Manufacturers' Association, said:

"Mr. President, you have said you mean what you say. We know it. I will also say, with like sincerity, that when the name Theodore Roosevelt is mentioned, Mr. President, no other name inspires in the heart of an American the pride which that name suggests."

The guests filed by the President and were introduced to the President by Mr. Fernley.

This closed the programme for the day.

One of the incidents of interest in connection with the convention was during the visit of the delegates to the White House. Col. Nutting, the chairman of the Press Committee, in speaking of it afterward, said that it was a revelation to him as to the President's memory for faces. There had been some discussion before the visit as to whether the stories told of President Roosevelt's memory for faces was accurate, and Col. Nutting had a good chance to test it.

Digitized by Google

He had never met the President but twice, and the last time was two years ago. But when he was brought up in line and shook hands Mr. Roosevelt exclaimed:

"Hello, Colonel; glad to see you. How are all my old friends out in Davenport (Col. Nutting comes from Davenport, Iowa), and especially how is Miss French? (Octave Thanet.) You tell her I read all she writes. Do you know, that woman knows as much about factories and the machine business as a man!"

The members of the association who witnessed the incident decided that the President's memory for names and faces had not been overrated.

AUTOMOBILE SIGHT SEEING TOUR.

On Thursday afternoon, at four o'clock, there was started from the Arlington Hotel an automobile sight-seeing tour through Washington for the members and visitors. This was largely attended by them and three large automobiles took them to every place of interest in the capital to the edification and enjoyment of all participants.

THURSDAY EVENING, NOVEMBER 9.

At the New Willard Hotel, an address was delivered by

THEODORE P. SHONTS,

Chairman of the Isthmian Canal Commission, who delivered an exhaustive *resume* of the work to be accomplished under his direction, and who gave a good, practical talk in a businesslike way upon the great project, in which he demonstrated the difficulty of an enterprise of that magnitude, in which the preparatory work had to be carried on two thousand miles from the base of supplies, in a hostile climate and under health conditions, which, through centuries of neglect of all sanitary principles, had become a menace to the lives of all persons save natives of the tropics. He was listened to with great interest and with frequent applause.

EXECUTIVE SESSION.

FRIDAY MORNING, NOVEMBER 10.

The convention was called to order at 10.30 a. m. by President Bigelow.

A resolution was offered by one of the delegates on the subject of the U. S. Consular Service. He said the matter had been brought to his attention by those who were interested in improving the American Consular Service. The following resolution was adopted:

"RESOLVED, That the National Hardware Association in convention assembled in the National Capitol approves the measure to reorganize the American Consular Service on a strictly business basis, that it may become more serviceable in the extension of our fereign trade, by the creation of a larger market for our surplus products."

A committee was appointed to prepare resolutions of thanks to the ladies for their splendid entertainment, also to send a letter of thanks to President Roosevelt for the reception tendered to the asociation.

The report of the Press Committee was received and filed.

The report of the Executive Committee was taken up for discussion in detail. The various recommendations therein were concurred in.

At the close of the meeting of the main association the Heavy Hardware Committee went into session, after which the convention adjourned until 2.30 p. m.

EXECUTIVE SESSION.

FRIDAY AFTERNOON, NOVEMBER 10.

Convention was called to order at two thirty and the considerations of portions of the report of the Executive Committee was continued.

The report, on motion, was adopted as a whole.

The Auditing Committee reported they had found the accounts in good order.

The report of the Heavy Hardware Committee was received and placed on file.

A committee was appointed to confer with a similar committee of the American Hardware Manufacturers' Association to consider the most desirable place for the next annual meeting of the two associations.

RESOLUTIONS.

The Committee on Resolutions made the following report:

To the National Hardware Jobbers' Association:

Your special committee respectfully recommend the adoption of the following resolutions:

RESOLVED, That a cordial vote of thanks be extended to Mrs. F. P. May, Mrs. George May and the ladies who assisted in making our visit to Washington so pleasant and happy; to Rev. D. J. Stafford, D.D., for participation in our opening exercises; to Mr. J. H. Van Newkirk for his arduous labors as Journal Secretary; to Mr. J. J. McCaffrey for his painstaking work as Railroad Secretary; to the American Hardware Manufacturers' Association for their profitable and instructive meeting and exceptionally social reception; to Mr. E. S. Jackson for his incessant and successful work in preparation for the banquet; to the Arlington managers for all they have done towards making the convention a success.

It is a pleasure for the committee to add to the report the congratulations to our President, Samuel A. Bigelow, from our entire membership, on his completion of his semi-centennial in he Hardware trade, and to express the that he is now entering upon the most successful and enjoyable period, the length of which shall nearly equal that which has passed.

RESOLVED, That the thanks of this association be tendered to the American Manufacturers' Association for the privilege extended our members, including the ladies, of listening to the HON. THEO. P. SHONTS in his able presentation of the Panama Canal question, and to the address of GIFFORD D. PINCHOT on the subject of "Forestry in the United States."

RESOLVED, That the National Hardware Association partly indorses the views of Mr. Shonts and pledges the support of it members in assisting him to reach the end to which he and this Government stand pledged, namely, that the Canal will be built and, on, motion, the resolutions were unanimously adopted.

ELECTION OF OFFICERS,

The report of the Committee on Nominations was then called, and that committee made the following recommendations for officers for the ensuing year:

For President—W. S. Wright, Omaha, Neb.

First Vice-President—John C. Koch, Milwaukee, Wis.

Second Vice-President—Brace Hayden, San Francisco, Ca.

Executive Committee—P. E. Strauss, Boston, Mass.; W. D. Taylor, Cleveland, Ohio.

To fill unexpired term of W. S. Wright—A. J. Bihler, Pittsburgh, Pa.

The report of the committee was accepted, and, on motion the Secretary cast the ballot of the association for the nominees, and they were declared elected officers for the ensuing year.

The several newly elected officers addressed the association, expressing their appreciation of the honor conferred upon them.

The newly elected President, Mr. Wright, assumed the chair

PRESENTATION.

Mr. J. H. Ritter, on behalf of the association, brought forward to the rostrom four pieces of silver, consisting of three large silver berry dishes and a silver pitcher, and, addressing Messrs. H. H. Bishop, John Bindley, R. A. Kirk and Samuel A. Bigelow, stated that the association presented them with these souvenirs as evidences of the esteem of the association for them personally and in appreciation of their past services as presidents of the association.

The recipients of the gifts made appropriate acknowledgments.

The convention then received the report of the committee which was to confer with a similar committee of the American Hardware Association regarding the place of the next meeting.

That committee reported that the matter had not yet been fully determined upon.

It was moved and carried that the question of the selection of the next place of meeting be left to a committee of three to be appointed by the Chair.

An informal vote was taken to show the sentiment of the members as to the next place of meeting and resulted in a majority favoring the city of Washington.

A vote of thanks was tendered Secretary-Treasurer Fernley tor introducing the members to the President, and for his efforts in promoting the comfort of the guests during the session of the convention.

The convention then adjourned *sine die*.

HONORARY MEMBERS.

Irby Bennett	Nashville, Tenn.
George H. Sargent	New York City

The Ninth Convention of the American Hardware Manufacturers was held at the New Willard Hotel, Washington, D. C., November 8, 9, 10. Nearly 400 delegates were in attendance.

WEDNESDAY A. M.

No more appropriate place could be chosen for the Ninth Annual meeting of the American Hardware Manufacturers' Association, and the Eleventh Annual meeting of the National Hardware Association of the United States, than the City of Washington, the capitol of our country.

That this was the concensus of opinion was attested by the unusually large numberof members and visitors present—about fifteen hundred in all. The weather was perfect and everyone seemed to be in the right mood to enter into the spirit of the occasion, this annual gathering of Hardware men.

EXECUTIVE SESSION.

Formal opening session of the American Hardware Manufacturers' Association. Open to members only. After roll call the President then delivered the following address:

PRESIDENT'S ANNUAL ADDRESS.

by J. C. BIRGE.

The many important and far-reaching questions which are liable to come before this convention for your consideration, leads to a statement which may illustrate the close relations existing between us and the interests with which we have to deal. The proposition is, that Agriculture, Manufactures, Commerce and Education are corner stones in the temple of American Progress. As active factors in our national life, they should operate in perfect harmony toward the development of our material resources, in the prosecution of our individual duties, and in the uplifting and betterment of mankind. As each is absolutely dependent upon all the others, it would be absurd for either of these factors to ignore the others or assume to be independent of those vital relations which bind them all together. We see Agriculture wake the slumbering forces of the soil and cause the once barren wilderness to yield the food which every human being requires. The Manufacturer, from the crude materials found in rock and forest, shapes the infinite variety of useful articles upon which every civilized man is dependent. At the bidding of merchant princes, Commerce sends the white-winged messengers of peace across every sea, and on land distributes to every home nearly every desirable article needed for every human want, while Education gives to all the training which prepares them for this work and fits them to enjoy its fruits. Should anyone endeavor to escape this dependency and live as a hermit in the depths of the forest, he would find that the clothes which would protect him and the gun upon his shoulder are supplied from the joint service of the manufacturer and merchant. With the consciousness of these closely interwoven relations, and in the interests of perhaps the most extensive department of Manufactures, the Iron, Steel and Hardware industry, we are this week to be brought into conference with representatives of an important branch of Commerce with which we are closely associated, to wit: the Hardware Jobbers.

The purpose of these concurrent gatherings, is, as we believe,

TO PROMOTE AND CONTINUE PLEASANT MUTUAL RELATIONS,

to advance the interests of manufacturers to adjust if possible in a friendly manner any matters which may be causes of inconvenience or friction, and incidentally to infuse into our otherwise severe business relations the genial influence of social life.

There are branches of Commerce other than mercantile, in which we are also vitally interested, not the least of which is Railroad Transportation. Matters in which we have interests in common with the railroads are to be presented at this convention, and will doubtless receive your consideration. Possibly no two men could be found in the United States who were better qualified to discuss the merits of the old Bach-Townsend Bill than were Secretary Taft and President Spencer, who discussed the matter at Hot Springs.

The so-called Interstate Commerce Law Convention assembled in Chicago on October 26th and to which a delegation was sent from this Association. We were asked to sign and return a proxy, a form of which was sent us, providing that the vote of this body be cast in favor of a specific policy as indicated.

It is reasonable to presume that no officer of this Association would commit this body in such a slip-shod manner.

EVERY MEMBER OF THIS ASSOCIATION SHOULD BE A FACTOR

in any general pronouncement of views upon any subject wherein

NEW WILLARD HOTEL,
WASHINGTON, D. C.

a declaration of principles is made. We expect a brief report on this convention.

In August last a convention was held in Chicago, at which was considered the question of reciprocity and tariff revision. Our relations especially with Canada make the subject one of interest. A report from the chairman of our delegation will be presented.

On a former occasion there was presented to you some statements concerning the destruction of the great forests of the United States,—a matter of tremendous importance. You will be greatly interested and instructed on this subject, by Hon. Gifford Pinchett, Forester of the United States, on Thursday evening.

Agriculture not only represents the great producers of our country, but the agriculturists are among the most numerous consumers of your products. Our present method of transacting business and the sinking of our identity conceals us so completely from the consumers of our wares, that they can hardly realize that we are factors in their interest, and yet we must always have their wants in mind. In fact, upon them we are primarily dependent for our trade, and they are dependent upon us for the goods.

If the manufacturer, the merchant, the transportation company, and the consumer, are

THUS DEPENDENT ONE UPON THE OTHER,

it is manifestly important that the methods of conducting affairs shall be along fair, natural and proper lines, and in harmony with honorable business principles. If there are wide differences of opinion as to what are for the best interests of either of these departments as they bear upon any question of mutual concern, these interests may be profitably considered only through a spirit of friendly reciprocity. The interdependence of all these interests is so absolute, that neither can wisely dictate terms. In the light of these suggestions it seems proper briefly to mention some of the important questions which may come before you for consideration. turers who produce the particular articles referred to, state that the manufacturer's profit on them is very close—not to exceed 10 per

Digitized by Google

THE POSTAL QUESTION.

When in the office of a great factory or commercial house a little two-cent stamp is placed upon a letter, it is a matter of little thought, from the fact that it is but two cents. When, however, it appears that the aggregate during the year runs into hundreds and thousands of dollars, and that letter-postage is the chief maintenance of the great postal department and contributes largely to the payment of freight on parcels and other cheap-rate matter, we are inclined to ask, In what interests is this cheap transportation conducted? The subject is one which at the present time appeals especially to merchants, by reason of proposed legislation. Two years ago, at Atlantic City, the plan to increase the scope of parcels-post delivery by lowering the rates on merchandise, was presented at length by a special advocate of that idea. Many of our members expressed themselves as not being directly interested in the subject. Nevertheless, upon learning the disastrous effects upon the regular merchant trade, which would result from the proposed legislation, you with practical unanimity adopted resolutions in opposition thereto. These resolutions were transmitted to the proper authorities.

A few months ago there was widely issued from Brooklyn, N. Y., over the signature of Richard W. Bainbridge, an official of the Manufacturers' Association of New York, an alluring scheme, the ostensible purpose of which is the reduction of letter-postage to one cent. The ultimate purpose, however, was, as admitted,

TO INCREASE THE SCOPE OF PARCELS-POST DELIVERY.

The plan proposes that the increased burden be thrown upon the rates on periodicals, which would still result in an increased postal deficit. The much-abused "endless chain" system of correspondence was introduced, to give increased poularity and indorsement to the plan without cost to the promoters. Copies of these communications were sent to our members by our Secretary.

Another effort to facilitate parcel-post delivery resulted in an order from the Postal Department instructing that all rural routes be numbered and all boxes in each route should also be numbered, thus enabling certain classes of advertisers to reach every rural box in the United States without the expense and inconvenience of securing the names of the persons addressed. The Iron Age, of New York, took the initiative, and with much patience secured information, which, when laid before the postal Department,

RESULTED IN A TEMPORARY SUSPENSION OF THE ORDER.

The entire trade press of the country, and many merchants, have used their influence along the same line. The order was amended so that the names and numbers should both appear on the boxes. This intensified the objection. The fact offered by some manufacturers, that a liberal parcels-post would prove a convenience to them in mailing samples, is hardly an offset to the havoc which befalls the retailers through the shipments made from catalogue houses direct to consumers.

CATALOGUE HOUSES.

This naturally leads to the subject of Catalogue House competition, which has become one of absorbing interest to the trade at large in many branches, to manufacturers as well as to the merchants. The present position of the manufacturers on this question is very similar to that of an old colored man, described by an Ex-Governor of Virginia.

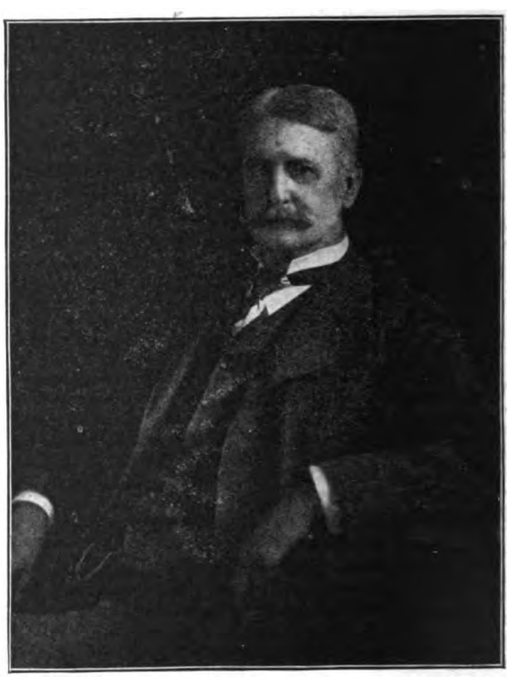
The negro, while riding a mule through a dense forest at night, was overtaken by a violent thunderstorm. Being unable to make any headway through the thick darkness except by the aid of the fitful flashes of lightning which occasionally revealed his surroundings, and becoming greatly alarmed by the loud and terrible peals of thunder which reverberated over his head, he at last appealed to the Throne of Grace in this fashion: "Oh, Lawd, if it's jest the same to You, I'd rather have a little less noise and a little mo' light."

We have heard the continued thunders, peal after peal, but we ned a little more light. We need light on how it is hoped to curb the Catalogue House except by competition, so long as some merchants and some manufacturers furnish them all the goods that they need, to the extent of $75,000,000 per annum, and so long also as these houses arrange to manufacture (as they now do) such good as they cannot easily obtain from other sources. This increase in the manufacturing branch of their business cannot be viewed either by you or the jobbers with complacency. In the meantime, the trumpets of rams' horns are being blown around the walls of Jericho, which refuse to fall. The retail merchants are encouraged to believe that you manufacturers are the evil spirits that are supporting these houses, yet it appears that few from this membership have any relations with them. Several articles published in journals, givings color to this idea, have appeared, and some communications from both Jobbers' Associations strengthen this belief. An official communication was delivered to our Secretary after your adjournment at Hot Springs, and has therefore not come to your notice heretofore. It is as follows:

"To the Members of the "June 8, 1905.
American Hardware Manufacturers' Association.

"The following resolutions have this day been adopted by the Southern Hardware Jobbers' Association, and are respectively submitted for your consideration.

"DISTRIBUTION OF GOODS BY THE MANUFACTURER.



"RESOLVED, That this Association record its unqualified disapproval of any manufacturer marketing any part of his product through any other channel than the legitimate hardware jobber, and when this policy is disregarded by any manufacturer, the offending party shall be reported to the Secretary, who shall take the matter up through personal correspondence and endeavor to cause the manufacturer to discontinue this practice; and we further most earnestly protest against the manufacturer selling to the small dealers at all, as by doing so the small dealers frequently purchase more goods than they can legitimately handle, and therefore dispose of the surplus at cost, to the damage of the jobbers for hundreds of miles around."

This communication was acknowledged by our Secretary, who quoted a resolution adopted by you at Atlantic City, which resolution was quite in harmony with the request of the jobbers.

It must be conceded that the inroads of the Catalogue Houses are certainly a matter of serious concern to all retailers and jobbers, and is of equal concern to you. Strong and

EXPERIENCED MERCHANTS ARE PUSHING THE CAMPAIGN AGAINST THESE HOUSES,

and, as we must believe, conscientiously and vigorously, in the interests of the merchant trade. So, far, however, as is indicated by the information which has come to our notice, the only remedy proposed by the merchants organizations is that all manufacturers and jobbers shall discontinue the sale of any goods to these houses. The penalty for any disregard of this protest will be the reporting of the offender to their Secretary, after which the defendant will be given a hearing. If found guilty the punishment will be at the discretion of the court. You naturally ask, does this place the manufacturer in a dignified position? Is it a courteous declaration, and can it possibly prove an adequate remedy? Even though it may seem perfect in theory, is it possible to induce or compel all

JULIUS C. BIRGE,
PRESIDENT.

jobbers and manufacturers to co-operate? If the response is not absolutely unanimous, will it succeed? Have we evidence that the jobbers are inclined to make any sacrifices or concessions whatever, looking to this end, and which are in any sense equal to those sacrifices which they ask you to assume when they urge you to refuse all trade with those great houses, at the same time also to avoid retailers, also those who sell groceries, and consumers, which request is responded to by the greater number of our members? There is another phase of the case which may be fairly considered. Let us assume (which we can safely do) that no Catalogue House can buy from a manufacturer any article at any less price than you would sell a similar article to a regular jobber. Now, taking into account the cost of catalogues, the expense of distributing them to millions of consumers, and the addedd cost of the delivery of single packages by their methods, are they able to place this article directly into the hands of the consumer at a less price than the retailers will supply a similar article which they obtain through the ordinary channels of trade, the jobbers? It would appear that they are able. If they are, both we and the jobbers certainly have the Catalogue House question with which to reckon. The jobbers and retailers cannot, either with fairness or success, throw the burden of the fight entirely upon the manufacturers.

For the purpose of ascertaining if the merchants are really making sacrifices which would appear sufficient to meet the Catalogue House competition, we have taken occasion to purchase a few very staple articles of different kinds from reliable retail stores near Chicago, the center of disturbance. The different manufac-

Digitized by Google

cent.; and this statement we have endeavored to verify. On one kind of article, the retail price paid was $1.10 each. Tracing this identical article back to the manufacturer who produced it, it was found that the cost to the jobber was not to exceed $4.00 per dozen; thus, showing a net profit of more than 200 per cent. to be divided between the jobber and the retailer, with enough margin remaining to pay the freight to the jobber. We discovered similar results on other lines of goods, each showing equally large margins for someone. This kind of competition will certainly not interest a country buyer who has access to Catalogue House prices. While many of us have been strictly and conscientiously refusing to sell this and other similar trade, the Catalogue Houses have on a large scale

ENTERED INTO THE MANUFACTURE OF GOODS

which they find it difficult otherwise to obtain. At the same time, some jobbers have also entered the field of manufacturers, both directly and indirectly. While the manufacturers have been pilloried in these rigid stocks, more than one of the large jobbers, as has been generally known, have during the past year held extensive trade relations with these Catalogue Houses; and you are therfore again between His Santanic Majesty and the dark and deep blue sea.

The subject is of commanding importance to us. We believe that the Catalogue Houses are a menance to the retail stores. We recognize that the retail stores make the country towns to become centers of civilization. For the interest of rural communities, if for no other reason, we would foster them.

We are striving, and will continue, to assist the jobbers who are

GEORGE W. CORBIN,
VICE-PRESIDENT.

HENRY B. LUPTON,
VICE-PRESIDENT.

our customers, in trying to solve this problem, but they apparently fail to recognize the fact that their only remedy means that the various manufacturers shall turn their backs on an annual business of more than $60,000,000, which is transacted by two of these houses. Most of us will continue to make the sacrifice so long as there is any prospect of accomplishing results, but the present crusade against those houses along the lines proposed is sure to fail.

In the line of campaign, which is that the manufacturers as a whole shall be drafted and put in the front line in the conflict, for the protection of the so-called regular trade, and suffer the main shock of the almost hopeless contest, should you not have some share in the honor which is usually accorded to worthy allies, or are you content to remain down in the galleys tugging at the oars while the commanders sit on the deck waving their flags and receiving the plaudits of their admiring constituents?

It is fair to state, however, that the Merchants' Committee certainly have conducted an honorable and open campaign. There has been no subterfuge or deception, for they have stated with apparent frankness and sincerity just what they want—an example worthy of the emulation of this Association. It deserves in return our highest respect and if the interests of manufacturers had been more fully recognized would doubtless have received almost universal co-operation.

SPECIAL BRANDS

The statement has recently been published that you have raised the issue of Jobbers' Special Brands for the purpose of evading the Catalogue House question. It would seem this impression is an error, for the reason (as I am informed) that the subject of Special Brands was the main question presented at the first meeting of this Association, four years ago, and at a time when the jobbers as a whole were nursing the infant which has now become a giant beyond their control. This subject has annually since that meeting been presented by various members for your consideration. This, however, seems immaterial. The fact remains that you have made it a question of to-day, and have imposed upon me by virtue of my office the duty of bringing it before this convention. This seems to necessitate a brief statement of the present status of the question.

You will remember that at the convention at Hot Springs there was read a report upon this subject, which was previously prepared by a committee of nineteen members selected by your instructions from the various industries here represented. The report was unanimously adopted by a rising vote, without one single dissent, and at the largest executive meeting ever held by this Association. The official copy was transmitted to the jobbers then in session, with the request that they give it their kindly consideration. Their reply, which, by the way, never reached us except through the press, clearly indicated that the report was not understood or received in the spirit in which it was presented. This is not strange, because the jobbers had but little time for its consideration, and this time was apparently devoted to some personal matters and to the form in which the report was framed, rather than to the real question at issue. In view of your unanimous and deliberate indorsement of the report, it must be understood that you then believed that all the statements contained therein were true. It was your expressed opinion that in view of the supreme importance of the subject as it bears upon many of you as manufacturers, it was expressed in the language of moderation and in a spirit of thorough friendliness. The evident plan of the report was to set forth briefly and as kindly as possible some effects of a practice which, as much from the policy of the manufacturers as through the acts of the jobbers, has become so nearly universal as to cause you embarrassment, which embarrassment is intensified by the urgent, and, under other conditions possibly the reasonable request that you confine your sales exclusively to jobbers. So far as can be discovered in your report, the entire discontinuance of

THE USE OF SPECIAL BRANDS BY JOBBERS

was not suggested, or probably not expected. You expressed no objections concerning the use of jobbers' names on any articles. The issue presented was that the jobbers generally demand the absolute elimination of every track, trace or resemblance of the manufacturer's brand, name or place of business, upon the goods furnished, and this under existing conditions you regarded as unfair. It was admitted that a few goods bearing factory brands were sold in cases where the customer demanded them. The concluding paragraphs of the report embrace all that you as an Association have asked to the present time. The request is as follows:

"We therefore ask the Southern Hardware Jobbers now in session to consider the question whether or not the sale of standard factory brands in preference to the enormous multiplicity of irregular private brands, would not also be to their advantage. We invite this consideration, with the assurance that we certainly can and do furnish goods bearing our standard brands fully equal in quality and certainly at as low prices as those at which we would furnish similar goods under special brands.

"Some doubtless have adopted the use of Private Brands, in view of the possibility that if an article bearing the manufacturer's brand prove to be highly satisfactory and profitable to the retailer

Digitized by Google

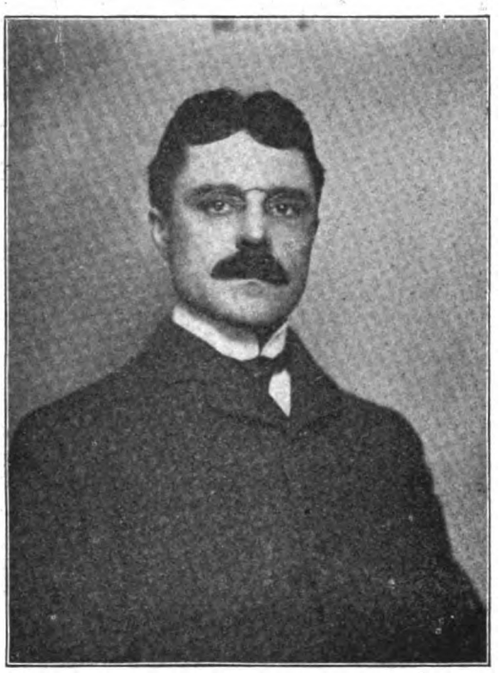
and consumer, such persons may seek to deal directly with the producer. The present policy of manufacturers should certainly remove this fear if it exists, but we believe that the use of Jobbers' Private Brands is inclined more than anything else to drive the manufacturers to a more direct distribution of their goods.

"Such merchants as will assist in the mitigation of this evil by handling regular manufacturers' brands, will receive our most cordial support and co-operation."

This request certainly appears to be courteous, dignified and respectful, and fairly opens the gates for a conference if such should be mutually agreeable.

One paragraph in the report, which to a callous manufacturer seems to be quite innocent, has evoked much criticism, but, as stated in their reply, points to the jobbers as past-masters in the art of double-dealing. The objectionable paragraph is as follows:

"Many jobbers often buy a second grade of goods and sell them under a private brand as their first quality."



If this statement be untrue or misleading, you should correct it. It was not stated that all jobbers do this. In fact, if they did, it still is not questioned that any jobber or manufacturer certainly has an absolute legal and moral right to grade his wares as he sees proper. The occasion for the statement in your committee's report, as you doubtless construed it, was simply to show

THE EFFECT OF THIS PRACTICE ON THE SALE OF REGULAR BRANDS,

and not to point a moral—the question was Private Brands, and not men.

The gentleman who, it is said, prepared the main reply for the Southern Jobbers, is believed to be the soul of honor, and yet if the best goods which he sells under his own brands are at all times the best that are made, he is certainly a paragon and deserves to be enthroned on the seats of the saints.

If the paragraph should be addressed to some persons in another connection as indicating their ability to obtain good prices for their goods, it might be received as a high compliment, and some sales-

C. W. ASBURY,
VICE-PRESIDENT.

men on the road would receive an immediate advance in salary if they would develop the ability to sell cheap goods at a high price. On the other hand, it would not be strange if there were buyers who use all the arts of diplomacy to secure their goods at a less price than their competitors.

It is an axiom with merchants that goods must be bought well and sold well; but

WHY CLOUD THE MAIN ISSUE BY MAGNIFYING INCIDENTAL STATEMENTS

far beyond their importance and manifest intent, so long as it is admitted that many merchants and manufacturers rely upon the regular and uniform excellence of their goods for success.

The head of a certain very large jobbing house which has been exceedingly careful with the quality of its private brands (and there are others of the same type), apparently never imagining that his house was in the minds of your committee, has strongly commended your statement, and asserts that the common practice of shifting jobbers' brands and grades is unfair and misleading, and that many of them for the good of the trade should be eliminated.

The extent to which manufacturers are asked to meet the demand for private brands is fairly illustrated in the pocket cutlery industry, wherein not only is the jobber's private brand required, but in some cases the retailer's name is etched upon the blade in addition to the jobber's name. A pocket knife of this type was recently purchased from a retail store in a Michigan town having a total population of two hundred persons. It is a general store dealing in food, flour and general supplies.

If the manufacturer were given a fair recompense for the enormous detail accompanying such work there *might* be some justification for this practice. As the main speaker at the jobbers' session this morning presented many figures showing the small profit to the retailer when competing with catalogue houses, it may not be amiss to state that between the retail price paid for the knife just referred to, which was 75 cents, and the price at which manufacturers here present regularly furnish the same kind of knife to any reputable jobber, there is a profit of fully 150 per cent.

This is not one of the cases previously referred to in this report. If the speaker of the morning instead of showing only the profit between the jobber and the retailer in a few instances had also shown to the manufacturers what the jobber's profit really was, the burden of responsibility might have been more definitely fixed.

Other jobbers have stated that if you will protect them in a profit on your staple goods, they would prefer them to irregular brands. This plan deserves your consideration.

In your report you expressed the hope that some jobbers may fairly open the way for your brands to the consumers, and to such you promise your cordial support and co-operation, and you advise them that if present conditions continue it will be impossible long to restrain many of the manufacturers from seeking such avenues as will carry their regular goods to the consumers.

Putting aside the features of your report which it must be regretted have been construed differently from what was intended, the main points of the question are clearly before us, and are as follows:

The jobbers are pressing more strongly than ever that all of your products shall pass exclusively through their hands.

They will not to any considerable extent permit your brands or labels to appear on their goods.

They will buy and sell the goods of manufacturers who do sell through other channels.

They will manufacture, as opportunities are afforded, as they certainly have a right to do.

F. D. MITCHELL,
SECRETARY-TREASURER.

They ask you on their behalf to fight the Catalogue Houses, which to-day are off and far away beyond any possible control of either you or the merchants so long as present methods are pursued. Many of us have conscientiously worked with them on these lines, but the handwriting is on the wall.

Have you any assurance of reciprocity? Does the reply of the Southern Jobbers indicate any inclination to assist us in our dilemma?

While it is not the purpose of the factories with which the President of this Association is connected,

TO CHANGE THEIR POLICY IN MARKETING THEIR GOODS,

it is absolutely certain that, unless there can be some friendly compromise of these questions, in the near future, there will with many factories be a realignment of forces and a readjustment of methods in many lines. Some manufacturers will rush into the arms of the Catalogue and Department Houses, fearing it will soon be too late. Others will reach for direct trade through other methods. These words, being the expression of honest convictions, ought to be received even by a jobber in the friendly spirit in which they are given. It is no time for dissimulation or trimming, and a sensible merchant will respect a frank and honest statement in a higher degree than he will a qualified statement known to be somewhat different from views expressed on this floor.

If these sentiments are not fully endorsed and approved by you, this report will not be given to the press. I am simply striving to summarize your views as best I can and as your servant.

There is one matter with which many of you may not be entirely familiar. In the summer, a circular and prospectus prepared by some person not a member of the Association, was mailed to twenty

Digitized by Google

of our members. It was so sent without the knowledge or authority of your board or of the officers. Some person, from motives unknown to your board, appears to have placed copies of the document in the hands of some merchants. The standard of integrity of the Hardware Jobbers of this country is so favorably established, that we know with certainty what estimate they would place on any person who, to put himself in their favor, will deliberately seek to embarrass those whose confidence he has temporarily secured.

These questions now before us, and which seem to be of such commanding importance to the manufacturers at the present time, and being perhaps of equal interest also to the merchant trade and to the consumers, seem to emphasize the idea set forth in the introduction to this paper (and doubtless at too great length), that the subject ought to be treated if possible in harmony with the merchants.

The Jobbers have asked you to discuss with them the Catalogue House question. They have expressed themselves on the subject of Private Brands. On all subjects except the last mentioned, you have apparently come fairly into accord with them. The discussions have resulted in placing before both bodies the two sides of the question and in the spirit which might be expected. One value of these joint conventions is to work toward a mutuality of interests.

The Hardware jobbers of this country I hold among my best and most valued personal friends, and you surely share this sentiment. Like other honorable business men, they would abhor deception, and they are bound at least to respect those who frankly and honestly, but in a kind spirit, will state their views. You need them, and they need you. Be fair.

If a committee from the bodies would undertake to reach some solution of this matter which would prevent radical measures on the part of our members, it might prove of value.

With this convention, the duties with which you intrusted me will be assumed by another. This seems the most fitting opportunity for me to express to you my sincere thanks not only for the honor which you have conferred upon me for the second time, but for the uniform kindness and forbearance which has been manifested, and which I trust may be bestowed upon my successor.

Unbounded thanks are due each member of your official boards. Their constant intelligent and sacrificing efforts, unknown to most of you, have been the power which has controlled the organization. Although some of them have at times from necessity been brought into some prominence, yet each of them has been averse to those duties wnich would bring him into the public eye.

This has led to a readjustment of your committees, and you will doubtless observe that there is now very little duplication of names.

The spirit of your present board is that there shall be rotation in office and that each member shall come to the front. Let every man keep behind this Association and push it along, and above all while you will be fair and honorable in your dealings with merchants you must be loyal to your associates here.

Respectfully submitted,

JULIUS C. BIRGE.

CATALOGUE HOUSE QUESTION.

The following address on the CATALOGUE HOUSE QUESTION was prepared by W. W. Pratt, of Goodell-Pratt Co., but lack of opportunity prevented its delivery at the time.

The growing tendency toward organization necessarily carries with it a heavy responsibility, which must rest upon the shoulders of those who direct and administer the affairs. This concentration of power must be handled wisely and well if the results are to be beneficial, yes, even if serious consequences are to be avoided.

The manufacturer of to-day, and particularly those engaged in making hardware and its kindred products, are not in an enviable position; they are standing between two fires as it were, they find organized labor on one hand dictating to them how they shall run their plants and an organized selling power upon the other making similar pretenses as regards their methods of distribution.

The honorable gentlemen comprising the Catalog House Committee, from motives purely philanthropic, are endeavoring to emancipate the great rank and file of hardware trade from the slavery of Catalog Houseism. They believe (certainly this is the impression conveyed by their statements) that the Catalog Houses must be destroyed, and are using every means in their power to accomplish this result.

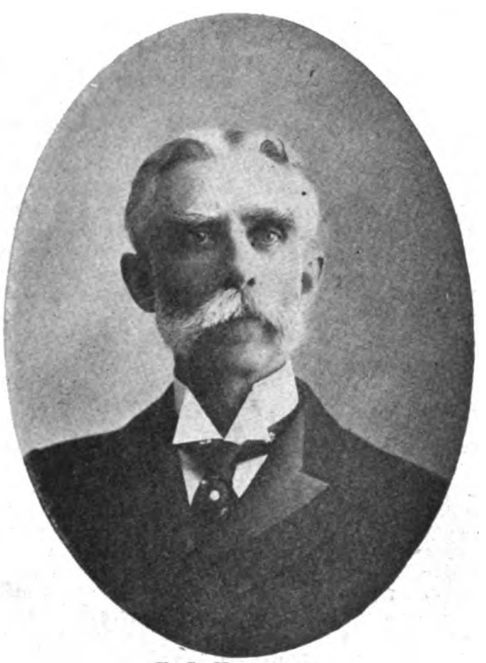
They have endeavored by persuasion and argument to

INDUCE MANUFACTURERS TO REFUSE TO SELL THEM GOODS,

hoping to either force the Catalogue Houses to become manufacturers themselves or go out of business. Having exhausted gentler methods, I understand that it is now their intention to adopt a more strenuous policy, that they will push forward with great vigor and through concerted action will attempt to *induce* the rank and file of the hardware trade in this country to *favor* in their purchases those manufacturers who have declined to sell the Catalog House trade.

Now there is little in the phraseology of this platform that could be criticised, yet its hidden meaning is not hard to read, I should hate to think that anyone of the gentlemen who are prominent in this movement would favor either directly or indirectly a campaign of boycott, yet this impression is sure to go out if such a program is adopted; it would be just as well, and I believe far better, to come out and call a spade a spade,

FIGHT IT OUT IN THE OPEN,



and let the outcome of the whole matter be the survival of the fittest. The adoption of that policy, gentlemen, may be with thoughts of revenge, it cannot be with the hope of victory.

The Company which I represent has taken no uncertain stand upon this question, we do not believe that it is wise or for our best interests to decline to sell the Catalog House Trade, and we propose to continue to sell them; and while we are willing to use our good offices with the Catalog Houses in an endeavor to have fair and reasonable prices maintained, not having seen fit to attempt to regulate the retail selling price upon various articles which we manufacture, we do not consider it consistent that we should insist upon the Catalog Houses maintaining fixed prices when we know that oftentimes retail merchants themselves are selling our goods for less money.

Now, gentlemen, we are willing to take all the blame upon our own shoulders,

THE GOODS WILL GO IN A STRAIGHT LINE

from our factory to the warehouse of our Catalog House customer; it will not be necessary for any jobber, be he a member of the National Association or not, to incur the enmity of his fellow jobbers by becoming an underground passage through which the Catalog House can be supplied with our goods. Having made our plat-

F. S. KRETSINGER.

form, we propose to stand on it, and if we are not able to succeed, we will accept with good grace the other alternative; or in the words of Kipling, as taken from the "Young British Soldier", slightly changed, "When the jobbers come out to cut up our remains, we will roll on our musket and blow out our brains and die like a soldier."

We believe that the consuming public has some rights in this matter, that to them the Catalog House is sometimes a convenience, sometimes an economy, and sometimes both. They have purchased our godds from Catalog Houses for many years, until this avenue of distribution has become a sizable one, and we decline to close it.

Gentlemen, with all due respect to your good intentions, you are on the wrong track, you are endeavoring to destroy when you should create; you are looking for moats in the eyes of others and you have overlooked entirely the beams in your own. You have concentrated a telescopic mind upon the evils of the Catalog Houses until they have become magnified beyond all proportion. Better far should you turn this instrument upon your own affairs in an endeavor to meet this competition by searching for methods of economy and assisting the retail hardware merchants, in order that they may be able to offer to the consuming public in service and efficiency what no Catalog House can ever supply.

Are you, gentlemen of the National Hardware Association, offering to the retail hardware merchants of this country

THE MAXIMUM OF SERVICE AT THE MINIMUM OF COST

or, have you in reaching out into territory far from your base increased your costs of distribution until they have become excessive? And you, gentlemen of the National Hardware Merchants Association, are your stocks well assorted and your stores well kept? Are you studying carefully the needs of your constituents, are you alive and quick to adopt modern trade-getting methods? Do you advertise to the consuming public, keeping your name before them and pointing out the advantages of your wares? Are you quick to take hold of any thing new which may interest your customers, and are your clerks alive to the necessity of showing up what they have to sell? I venture the assertion that those of you who can answer these queries in the affirmative never have, are not at the present time, and never will suffer severely from Catalog House competition.

Digitized by Google

The evils which you so desire to correct can never be corrected by an attempt on your part to throttle the Catalog Houses by shutting on their source of supply. The great consuming masses of this country will not stand for it, they hold the balance of power; without their demands your warehouses would be closed and your factories idle, and any attempt on your part to drive out of business a distributing medium which may appear to them a convenience, if not an economy, will result in failure and react to your own injury.

The Catalog Houses will continue to exist, regardless of this agitation, and such goods as they require they will be able to procure, notwithstanding all your efforts to prevent it. Now this is not a subject which can be taken up by the Manufacturers' Association as a whole, and acted upon as an association, certain manufacturers have already declared themselves as declining to sell to this class of trade; some of them tried to and could not, other of our members never came in contact with them at all, and still others, who have formerly sold them directly or indirectly, have acceded to the wishes of their jobbing friends and taken a step which I believe each and every one of them will live to regret. The only way you can put the Catalog Houses out of business is

TO EDUCATE THE CONSUMING PUBLIC

so that they will not buy from them; just so long as the consuming public regard them as a convenient source of supply, just so long will they continue in business.

What is the cause of all this distubance? Unprofitable prices. Who is to blame for them, Catalog Houses alone? Far from it. Sometimes the manufacturer through an over zealous desire to secure an order from a competitor's customer, or because of a surplus of goods and a shortage of cash, he feels that he must turn his stock into money. Sometimes the jobber, who in reaching out into fields far from his base, is obliged to offer some special inducement to secure a foothold, or in an endeavor to secure an order for special brand goods, which carry a large profit, is willing to sacrifice his profit on manufacturers' well-known brands, which always meet with ready sale. Then, again, the retail merchant will occasionally cut prices, perhaps he has more goods of some certain kind than he requires, and wants to sell them; perhaps his neighboring competitor has upset the market and he must meet him; perhaps trade is sluggish and he hopes to stimulate it.

Evils of this character are bound to crop out occasionally under our present competitive system, they can be corrected in a measure but never eliminated entirely. You can pick out individual items upon which the Catalog Houses are making ridiculously low prices, and I will find you retail merchants who have gone them one better; to go to the other extreme, I have known men in the retail hardware trade in this country who have deliberately marked articles costing them $12.00 per dozen, $2.50 each, and wondered why they did not sell. Perfection does not reign largely on this universe, and in our present day commercial life there is plenty of room for improvement, but I claim that the Catalog Houses, individually and collectively, are no more to blame for the present unsatisfactory condition of certain prices than the jobbers, retailers or manufacturers, individually or collectively; and the sooner you cease your warfare on them, the sooner will you be able to accomplish the end which you are now striving to attain.

YOU ARE HAVING THE SAME TROUBLE TO-DAY

with the Catalog Houses that you had among yourselves a dozen years ago, before the present organization was completed; you had tried for years to fight it out with your neighboring competitors, and the warfare was disastrous to both, you have perfected your organization, and your warfare among yourselves has ceased.

Now, I am not attempting to defend any individual Catalog House, neither am I defending all of the methods employed by Catalog Houses as a class, but I am defending this method of distribution. It is a legitimate one and will continue in vogue just so long as the consumer sees fit to employ it. This condition is no more serious, nor does it differ materially from that which confronts nearly every manufacturer at some time in his career; he finds, after having diligently worked toward the development of trade upon certain lines and met perhaps with considerable success, that some larger, better equipped, or perhaps more ingenious competitor has duplicated his product, and is offering it at less than his actual cost. Unless, gentlemen, the goods of that particular manufacturer have an individuality with the consuming public, he must meet their prices, or he is bound to lose his trade,

HE CANNOT CONTINUE TO SELL GOODS AT A LOSS

and he is forced to devise means and methods sufficiently economical to enable him to compete at a profit. He might go about the country making any amount of noise, but it would not avail. Perchance could he invoke the gods of war, and assembling them within the inner chamber and behind closed doors, invite the various jobbers of the country to come there and define their position, notoriety he might gain, but not the results desired. He might even be so bold as to attempt to cut off the source of his competitors' supply of material; how much, gentlemen, do you think that would avail? Go to them, convince them that the retail hardware merchant can render better, more efficient, and as economical service as the Catalog Houses and you have nothing to fear from their competition; until you do that, this method of distribution is bound to continue an important one.

Now all that is written and all that is said about Catalog Houses is only advertising them to the consuming public. While you are endeavoring to make it more difficult for them to obtain goods, they are increasing their efforts to sell, and stirred by their success, aspirants for similar are starting new Catalog Houses in the East, in the West, in the North and in the South; for any dealer who publishes and circulates freely a net price list to the consuming trade most be considered a Catalog House. It is the principle which you assail.

The present large Catalog Houses of this country were nursed by you during their infancy, now you have forgotten your mother love and are attempting to disown them. You sold them all the goods which they required, until their purchases became so large that

IT WAS NECESSARY FOR THEM TO DEAL WITH THE MANUFACTURER

direct, and from that moment your warfare against them began. Are you as particular about declining to sell these new Catalog Houses that are springing up now, in their infancy, as you will be when they have become larger factors in trade? Or, are you willing to supply their wants while they are small, and when they begin to assume proportions and become important avenues of distribution, will you ask the manufacturers to assist you in shutting off their supply? If this sounds strange to you, let me call your attention to the fact that truth is stranger than fiction.

In closing, let me say that the solution of this problem rests wholly and entirely with the consuming public. Go to them, convince them that the retail hardware merchant can render beetter, more efficient, and as economical service as the Catalog Houses and you have nothing to fear from their competition; until you do that, this method of distribution is bound to continue an important one.

GEORGE P. HART,
CHAIRMAN EXECUTIVE COMMITTEE.

OPEN SESSION AT THE NEW WILLARD.

THURSDAY, NOVEMBER 9, 8.30 P. M.

The auditorium on the tenth floor of the New Willard was crowded with both manufacturers and jobbers and the ladies when President Birge called the meeting to order and introduced Vice-President Lupton, who presided. Theodore P. Shonts, chairman of the Panama Canal Commission, was first introduced.

Mr. Shonts spoke as follows:

ADDRESS OF THEODORE P. SHONTS,

Chairman of the Isthmian Canal Commission,

BEFORE

THE AMERICAN HARDWARE MANUFACTURERS' ASSOCIATION,

AT THE NEW WILLARD HOTEL, WASHINGTON, D., C.,

ON THE EVENING OF NOVEMBER 9, 1905.

President Birge and Members of the American Hardware Manufacturers' Association:

When I received Mr. Lupton's invitation to come before your association and talk on the Panama Canal, I accepted it with pleasure because of the opportunity it afforded of talking to business men in a business way of what is a great business project; as I view it, the building of the Panama Canal is a business, not a political, proposition. (Applause.) I propose, in what I have to say to you, to talk as a practical man to practical men who themselves are engaged in large commercial enterprises, and who know from experience the difficulties to be met and the enormous amount of thought and labor involved in the inauguration of great undertakings in the United States. You will be able to appreciate, therefore, how every difficulty was aggravated in an enterprise of the magnitude of the Isthmian Canal, in which the preparatory work had to be carried on two thousand miles from the base of supplies. But this is not all: The work

Digitized by Google

had to be done in a hostile climate and under health conditions which, through

CENTURIES OF NEGLECT OF ALL SANITARY PRINCIPLES,

had become a menace to the lives of all persons save natives of the tropics.

In order, therefore, to make the Isthmus a place fit to live in and to work in, there were three fundamental tasks which had to be performed in advance of all others.

First. Through sanitation of the Isthmus.

Second. Providing suitable habitations for all classes of employees.

Third. Providing a system of food supply which would afford to all employees opportunity of obtaining wholesome food at reasonable cost.

1st. In regard to sanitation: When the United States began this work there were no systems of water works, of sewerage, or of drainage on the Isthmus. The people depended largely on unprotected cisterns for their water supply, filled during the rainy season, and on barrels filled from neighboring streams, all breeding places for mosquitoes. The filth of ages had accumulated around the dwellings and in the streets undisturbed except when washed away by torrential rains. Pools of stagnant water had existed for years in proximity to dwellings and insect-breeding swamps lay undrained adjacent to the cities and many of the towns. Seventy per cent. of Panama is now supplied with pure mountain water, fed from a storage large enough to furnish sixty gallons per day to each inhabitant after its present population shall have increased one-half. Fifty per cent. of a complete modern sewerage system has been installed, and work on the remainder is being carried rapidly forward. The first million of brick for paving its streets are on the ground. The city has been fumigated time and again, first house by house, to stop the spread of disease, and again as a unit, that is, the entire city at one time. A large force is just finishing a thorough cleaning of the city—the first scrubbing it has had during its centuries of existence; and Governor Magoon, under whose jurisdiction all this work has been accomplished, is arranging to raze many of the worst shacks and replace them with modern sanitary buildings. Within a year, it may confidently be predicted, Panama will be a city well watered, well sewered, well paved, and clean and healthy.

What has been done for Panama is being done for Colon and every important labor camp across the Isthmus. Work on Colon's water reservoir is well under way, and temporary measures are being employed to safeguard the city's health pending the report of a Board appointed to recommend plans for permanent improvements.

AN ABUNDANT SUPPLY OF PURE WATER

from mountain springs has been provided at Culebra and at other important labor centers along the line of the canal, and adequate drainage is being installed in them also.

Four thousand one hundred men are now employed in these sanitary undertakings. So effective has been the work that yellow fever has been virtually extirpated from the Isthmus. In June last there were 62 cases of yellow fever there; in July, 42; in August, 27; in September, 6, and in October, the worst month of the year for yellow fever, 3—no one of the latter among the employees, and all originating many miles from the line of the canal. In regard to general health conditions, I was told, when on the Isthmus in October, that there were over a hundred less patients in Ancon Hospital than there had been for many months, although we had brought in 4,000 additional laborers during the previous two months, and it was from the new arrivals that the hospitals were usually recruited.

To fully understand what has been accomplished by our sanitary work it is only necessary to compare the present rate of sickness with that which prevailed on the Isthmus when the French were in possession. In August, 1882, the second year of the French occupancy, with a force of 1,900 men, the death rate was 112 per 1,000. In August, 1905, with a force of 12,000 men, there were only 8 deaths, or two-thirds of a man per 1,000. (Applause.)

If we have not, as our critics complain, made "the dirt fly," we have made the filth fly, and we have made yellow fever, that supreme terror of the tropics, fly so far from the Isthmus that it will never, let us hope, find its way back again.

We have established a hospital system which includes a large hospital at Colon and another at Ancon, and a number of smaller hospitals at convenient points along the line. The one at Colon is built on piers over the Atlantic Ocean, and patients there have at all times the benefit of cool and invigorating sea air. That at Ancon is one of

THE LARGEST AND BEST EQUIPPED IN THE WORLD,

situated on the hill above Panama and commanding a superb view of mountains and sea.

The management and service of the hospitals are on a par with the natural advantages and beauty of location. Colonel Gorgas, who is in direct charge of hospitals, has organized a staff of doctors and nurses for which it would be difficult to find a superior anywhere. Mr. Isham Randolph, one of the members of the Consulting Board of Engineers, who recently visited the Isthmus, said, in a letter published on his return: "The hospitals are a source of just pride to our people. If sickness could ever be regarded as a boon, it may be so thought of in Ancon and Colon." No less emphatic testimony comes from Mr. D. M. Hazlett, who speaks from personal experience as a patient in Ancon Hospital. Writing in the *Panama Mail*, he says: "The medical staff and corps of trained nurses are beyond criticism. No expense has been spared in providing the various wards with all the conveniences which science and experience can command. There is probably no institution in the world where patients receive better treatment or more faithful service than in Ancon Hospital."

2. In regard to providing quarters for the employees. The commission inherited from the French Company more than 2,100 buildings, all in bad condition. During the last year, over 500 of them have been repaired; two new hotels, three stories high and containing from 55 to 60 rooms each, have been completed, and authority has been granted for eight others, a portion of which are under construction at the present time. Work is in progress also on cottages for married employees and on bachelor quarters. In this work of construction 2,400 men are employed, and additional carpenters are being sent out with every steamer. This work is being pressed forward with the utmost vigor.

3d. In regard to food supplies.

THIS WAS THE MOST SERIOUS PROBLEM THAT CONFRONTED US.

If we couldn't feed the men, we couldn't build the canal. Owing to the fact that the natives never look beyond their present necessities, no surplus food supply ever accumulates. This normal condition of no surplus was greatly intensified by the almost total failure of the crops for the two preceding years, by the abandonment by agricultural laborers of their farms back in the hills for work on the canal, where they received higher pay for shorter hours, and by quarantine against the port of Panama on account of bubonic plague, which prevented the arrival of food stuff from neighboring provinces.

We were thus brought face to face with the problem of feeding twelve thousand (12,000) men, with base of supplies 2,000 miles away.

We immediately arranged to open local commissary stores at every important labor camp, to provide mess houses, and to furnish food, both cooked and uncooked, to all employees at cost. We cabled orders to have our steamers equipped with refrigerating plants; we arranged for the erection of a temporary cold storage plant at Colon; and we purchased refrigerator cars for immediate shipment to the Isthmus, thus establishing a line of refrigeration from the markets of the United States to the commissary stations of the Isthmus. We also purchased from individual lessees the equipment in existing hotels and assumed their management ourselves. The net result of these efforts is that to-day we are affording to all employees opportunity to obtain an abundant supply of wholesome food, cooked and uncooked, and at reasonable prices. The silver men—by which I mean the common laborers—

W. M. PRATT,
OF EXECUTIVE COMMITTEE.

are being fed for 30 cents per day, and the gold employees—by which I mean those of the higher class—at 90 cents per day, and it is good food in place of bad. There may be dispute about the blessing of tainted money, but there can be none about the curse of tained food (Applause.)

But in addition to these fundamental tasks of improving the health conditions on the Isthmus and providing for the physical comfort and well being of all classes of employees, another essential preliminary to actual canal building has been receiving our earnest attention. I refer to the enlargement and improvement of our facilities for receiving and distributing the immense quantities of materials and supplies which will enter into the construction of the canal, as well as into the work referred to. The only really valuable instrument essential to canal building acquired by our government in its purchase from the French was the Panama Railroad. But this instrument, like all the others whose wrecks cover the Isthmus, had been neglected and its equipment allowed to become obsolete. If the docks, wharves, warehouses, terminal yards, locomotives and cars of the Panama Railroad had been in good repair, which they were not, they still would have been entirely inadequate to properly care for and handle the small commercial business the road was transacting. The existing facilities, poor as they were, were rendered less efficient by the entire absence of any mechanical appliances on the docks to assist in receiving or discharging the steamers' cargoes. The negro laborer was the only power employed; he was at once the only hoisting machine and the only traveling crane in use. Imagine, then, the congestion which necessarily ensued when the accumulated orders in the States began to arrive in large quantities on both sides of the Isthmus. To aggravate the situation, while the deluge of arriving material was at its height, the commercial business of the road increased nearly 50 per cent. over the year before; and at the moment when we thought affairs could

Digitized by Google

get no worse, two cases of bubonic plague at La Boca resulted in two consecutive quarantines at that place, completely tying up that outlet for 60 days. Furthermore, the personnel of the Panama Railroad as acquired had not been educated on modern lines, and therefore was completely paralyzed when confronted with the onerous conditions caused by this congestion. It was necessary, consequently, to begin at once the construction of new wharves equipped with modern mechanical appliances, and of large terminar yards at both ends of the road; of extensive warehouses; of suitable machine shops and of a modern coal hoisting plant, which will reduce the cost of handling coal from ship to engines from $1.30 to about 12 cents per ton.

We have also purchased new and more powerful locomotives, larger cars for both passenger and freight services, and heavy steel rails for relaying the road, and have strengthened the bridges to enable them to carry the heavier equipment. We have reorganized the personnel of the road, putting into the higher positions experienced, aggressive, up-to-date men, with the result that with the old equipment and facilities they have cleared up during the last thirty days an accumulation of over 12,000 tons of commercial freight. With the advent of our increased dock facilities, terminal yards now nearly complete, and new power and equipment now arriving, the road will be in a position to handle efficiently and economically a vastly larger volume of business than heretofore.

While all this necessary work was in progress, the task of purchasing, forwarding and distributing the enormous quantity of materials and supplies of all kinds was receiving our constant and most careful attention. The purchases included not only the items entering into the permanent plant, but also those required for the preliminary work. To give you an idea of the magnitude of these purchases I will read for you the principal items: 61 steam shovels, 1,300 flat cars, 12 rapid unloaders, 22 unloading plows, 13 earth spreaders, 324 dump cars, 12 hoisting engines, 120 locomotives, 5,000 tons of steel rails, 125,000 cross ties, 12,000 pieces of piling, 14 air compressing machines, 3 cranes, 152 rock drills, 30,000,000 feet lumber (approximately), 2 dipper dredges, 646,000 pounds blasting powder, 617,500 pounds dynamite, 7,000,000 paving brick, 3,500,000 building brick, 500,000 square feet roofing tile, 36,000 barrels cement (approximately), 3 steel water tanks and towers, 12 stand pipes, 2 ocean steamships.

The approximate total cost of our purchases was about $9,000,000. It should be borne in mind that at the time when orders for most of these items were placed, the industries of the United States were crowded with domestic business, and were unable, consequently, to make prompt deliveries. It should be borne in mind, also, that after machinery had been manufactured here and set up, it had to be taken apart, shipped two thousand miles over steamship lines already taxed to their full capacity, and on arrival on the Isthmus had to be again set up before ready for use. Then, too, on account of many reports as to the prevalence of yellow fever on the Isthmus, it was very difficult at a critical time for concerns furnishing material to get steamers to take it there, because of fear that their crews might become infected and their vessels might be quarantined when they wished to return to the United States. Finally, the steamers of the United Fruit Line from New Orleans, which had been carrying a considerable amount of the freight going to the Isthmus, were put out of service on account of yellow fever in that city.

To the various causes of delay mentioned is to be added the requirements of law that all bids for materials used in government work shall be advertised for. This compels a delay in all cases of from ten to thirty days.

Furthermore, in addition to the purchases for the canal, the following have been ordered for the Panama Railroad: 500 box cars—40 ton, 12 caboose cars, 10 refrigerator cars, 6 passenger coaches, 24 locomotives, 2 wrecking cranes, 1 locomotive crane, 1 pile driver, 3 track scales—100 ton, 1 modern coal hoisting plant, 1 cantilever crane for coal hoisting plant.

In regard to all equipment purchases, both for the canal and the railroad, it should be stated that the gauge of the Panama Railroad being wider than the standard gauge in the United States, made it impossible to use second-hand rolling stock of any kind; all locomotives and cars had, therefore, to be built to order. After the supplies reached the Isthmus we had to contend not only with the lack of terminal facilities and mechanical appliances already mentioned, but also with an inadequate equipment with which to distribute it to its destination or the force to handle it. These obstacles have been largely surmounted. The elimination of yellow fever and the establishment of better systems of housing and feeding the employees have enabled us to recruit our working forces till those assigned to the material and supply division now number over twenty-one hundred men.

I have so far, gentlemen, endeavored to give you an idea of the difficulties which we have had to encounter and overcome in order to make the Isthmus a place fit to work in, and to collect the tools with which to work. So far as actual excavation and dredging are concerned, we have not endeavored to accomplish much. As a general principle, in which I think you will all concur, it is inadvisable to attempt to run a railroad before the tracks are laid. We are now working, however, six steam shovels in Culebra cut, which is the largest single factor in the construction of the Canal, and have removed approximately one million cubic yards of material. By this work we are accomplishing two things: First, we are putting the levels of the cut in proper condition for the installation of the largest number of machines which can be effectively operated; and, second, we are gathering data which will be useful in future estimates of the cost of canal construction. In the Culebra work 2,600 men are now employed. We are also building railway tracks and yards, and are dredging at both ends of the canal, so far as advisable until the question of type of canal is decided. It should be understood that all the work we have done is applicable to any type of canal.

The question of labor is a grave and perplexing one. We have advanced far enough to know that we can secure a sufficient supply of labor from the tropics, so far as numbers are concerned. The question of quality is a very different matter. Unless a much greater efficiency can be developed than is secured at present, we shall have to look elsewhere. Probably I can best convey to you a just estimate of the quality of this labor by relating an incident which came under the observation of Senator Millard during his visit on the Isthmus: Sitting on the deck of the steamer "Havana," he was watching the unloading of a heavy piece of machinery from the hold of the vessel. The tackle got caught in the rigging on the deck above; the foreman in charge of the gang of laborers sent one of them above to free the tackle. The laborer went to the place to which he was sent, and did what he was told to do. The foreman, paying no attention to him after he started on his errand, missed him a few minutes later, and, looking around for him, discovered him sitting peacefully at the spot to which he had been sent. "What are you doing there?" yelled the foreman. "You told me to come here, sah." "Well, why didn't you come back?" "You didn't tell me to, sah." (Laughter.)

It is to this class of labor that we are paying from 80 cents to $1.05 per day in gold, and out of which it is estimated we do not get more than 25 per cent. (our reports to date show 33 per cent.) of the efficiency of labor in the United States. This is the kind of labor to which we are compelled to apply the eight-hour law—that is, to aliens who know nothing of the law's existence until they arrive on the Isthmus. Such application will increase the labor cost of canal construction at least 25 per cent., and will add many millions unnecessarily to the total expenditure.

In my opinion it is a mistake to handicap the construction of the Panama Canal by any laws save those of police and sanitation. (Prolonged applause.)

E. B. PIKE,
OF EXECUTIVE COMMITTEE.

I want to go on record here that the application of the eight-hour law, of the contract labor law, of the Chinese Exclusion act, or of any other law passed, or to be passed, by Congress for the benefit of American labor at home, to labor on the Isthmus, is a serious error. Over 80 per cent. of the canal will be aliens. A majority of the other 20 per cent. employed will be in a clerical or supervisory capacity. The application of these laws on the Isthmus will benefit a very small number of American laborers, but will enormously add to the cost of construction and American labor at home will have to pay its share of the consequence, heavy increase in taxation. As business men, you all understand the force of this statement. (Applause.)

That is the story, gentlemen, of what we have been doing on the Isthmus. In line with this, let me add that Chief Engineer Stevens, a man well equipped for the task he has undertaken, is preparing three complete sets of plans applicable to as many types of canal, so that when decision shall have been reached as to what type will be used, no delay in beginning work will ensue. It is our confident belief that by the first of July next the plant as purchased will be installed and working to its fullest practical capacity. In other words, by that time the dirt will begin to fly in earnest. (Applause.)

The canal will be built (applause)—rest assured of that—and it will be built at Panama. Those two phases of the problem have passed irrevocably from the field of debate. There is an industrious and voluble band of hired Ananiases (laughter and applause) moving to and fro in the land whose mission it is to deny this. The burden of their song is: "The canal will never be built at Panama, and everybody connected with the enterprise, including the President, and Commissioners, and Engineers, is convinced of it." You can hear the members of this band chanting their song, singly and in chorus, wherever men

Digitized by Google

congregate, and wherever reporters are gathered together. They are rehearsing for their grand burst of noise when Congess shall have assembled. When they ae not rehearsing they are putting the words of their son into bogus interviews and other written forms of newspaper publication, which they are sending forth by thousands from their Bureaus of Publicity in this and other cities. As one contemplates the output of this singular industry, this factory of fiction, he is moved to say of its guiding spirit, as Shakespeare says of Captain Dumain: "He will lie with such volubility, sir, that you would think truth were a fool." (Applause.)

Who is capitalizing this industry? What is the bountiful source of this spouting spring of mendacity? Is it to be found among the friends of an Isthmian Canal? Are these supplying funds for the sustenance of such a sampaign of misinformation? What interests, except those foolishly dreading the competition of an Isthmian Canal, would put up money to delay and possibly defeat its construction? That there are interests of that kind is not a matter of suspicion or speculation, but of history. They have been fighting a canal for more than half a century, and they fought it successfully till Theodore Roosevelt (applause), armed with his "big stick," appeared as its champion. (Applause.) From that moment their efforts have been powerless, but they have not yet discovered the fact. (Applause.) They are wasting their energies and their cash, for behind Theodore Roosevelt stand the American people in solid mass (applause) and with determined front, shouting as one man: "Give us a canal that will be adequate to meet the demands of the commerce of the world, and give it to us at the earliest possible moment." That, gentlemen, is the command which the Commission, under the inspiring lead of the President, is obeying to the letter. We are building the "Roosevelt Canal." (Prolonged applause.)

Gifford D. Pinchot, Chief Forester, was then introduced.

GIFFORD D. PINCHOT.

PREDICTED TIMBER FAMINE.

Mr. Pinchot spoke of the forestry problem before the people of the United States, which he declared to be of vital interest to every manufacturer.

"The people of our country, particularly the manufacturers, are threatened with a timber famine," Mr. Pinchot declared, and this statement formed the keynote of the principal part of his address.

Mr. Pinchot recited the efforts of the Forestry Bureau to protect the valuable timber lands of the country from devastation and threatened annihilation by the woodman's axe.

"It is very well to chop while there is timber to chop," said the speaker, "but if there is no wise discrimination, the day will come, and that not far off, when the last tree of value that is available for use will be felled, and then what are the manufacturers of this country going to do for their material for woodwork?"

It was cited that there is no manufacturing industry that is not dependent, more or less, upon timber—if not upon hard wood, the softer materials play some important part. There is no mine but what has to be timbered; railroads require it for the manufacture of rolling stock and cross ties; manufacturers who confine their attention strictly to the iron industry need it every day in many ways.

But this was only one phase. Mr. Pinchot brought the subject of the great watersheds of the country into his argument for the preservation of the forests, showing that as the timber is being cut away, rainfall is less, streams become smaller, and water power for manufacturing purposes diminishes. The deplorable timberless wastes of Spain were cited as a warning of what is possible in America within the next half century or century if proper provision for preserving and propagating forests be not taken.

PART THE WOMEN PLAY.

A striking feature of Mr. Pinchot's address was his tribute to the women of the audience, when he declared that the women of America would probably be greatly instrumental in the passage of a new forestry bill at the present session of Congress.

He cited that the initial step for the protection of the big forests of Pennsylvania, which are rapidly being cleared away, was taken by organized women, which resulted in State legislation. The women of Minnesota have proved a formidable factor in securing the large forest reservation provided for in the Morris bill, several thousand acres having been set aside in the Cass Lake Indian reservation.

The last speaker of the evening was Mr. David Williams, of the *Iron Age*, who spoke very briefly.

EXECUTIVE SESSION.

FRIDAY MORNING, 10 A. M.

At the executive session of the Hardware Manufacturers at the New Willard a resolution was passed indorsing the President on railway rate legislation, after a stiff fight. It was as much a personal indorsement of the President as anything else, and stood pat on his scheme for regulating rates without going into any details of the plan. The resolution finally passed was that known as "the Pike resolution," introduced by E. B. Pike, of New Hampshire. It said:

"The ninth annual convention of the Hardware Manufacturers' Association has under consideration proposed action of various kinds intended to promote and preserve the interests of the members as manufacturers and shippers, and incidentally the public at large, including the appropriate amendment of the interstate commerce law, that great statute which was designed to redress all real grievances of shippers and consignees, and yet protect

W. H. HAYS,

OF EXECUTIVE COMMITTEE.

the railway carriers in the exaction of just revenue, which has been shown by the test of long experience to be defective in important respects, and especially so in failing to afford prompt and efficient remedies to shippers for existing transportation evils; and

"Whereas, The amendment of this important remedial law was given extended treatment in the last message of the President of the United States to Congress, and has since been publicly discussed by the President in numerous addresses, wherein the great leader of the people and advocate of the endorsement of civil rights has announced the changes in the law, which, after the most painstaking examination and consideration by the

N. A. GLADDING,

OF ENTERTAINMENT COMMITTEE.

Attorney-General and other legal advisers, are deemed essential to effect the purposes of the act; and

"Whereas, It seems a prudent and wise course to follow the disinterested leadership of our great President, rather than be diverted by specious arguments of individuals, therefore, be it

Digitized by Google

"RESOLVED, That this association cordially indorses the plans for railway rate regulation proposed by President Roosevelt and recommends that such railway rate regulation be enacted by Congress at its next session."

REFORM IN CONSULAR SERVICE.

The question of consular reform was raised in a resolution by F. P. Kretsinger, and was disposed of in the usual manner common to commercial conventions in Washington. The resolution as adopted read:

"RESOLVED, That the American Hardware Association, in convention assembled at the national capital, approve a plan to reorganize the consular service on a business basis that it may become more serviceble in the extension of our foreign trade by the creation of larger markets for our products."

ELECTION OF OFFICERS.

The election of officers for the coming year was held, and F. S. Kretsinger, of Cleveland, Ohio, was elected President; C. W. Asbury, First Vice-President; George W. Corbin, of New Britain, Conn., Second Vice-President; Wm. M. Pratt, Greenfield, Mass., Third Vice-President; F. P. Mitchell, Secretary.

Executive Committee—Robert Garland, Chairman; Samuel Disston, John E. Harmster, William H. Hays, William Gaussing, C. B. Carter, Edward Ingalls and E. M. Kemp.

THE NEXT MEETING.

The next meeting of the association will be held six months

EDWARD INGALLS,
CHAIRMAN MEMBERSHIP COMMITTEE.

hence at Hot Springs, Va., and the next, which will be a year from date, has been referred to a committee, which will take the names of several cities under advisement. There has been some suggestion that the meeting a year from now should be held at Chicago, but this has not yet been determined.

The members of the association will hold an afternoon session, at which the final business of the meeting will be transacted, and the meeting will close with a banquet in the Willard Hotel to-night.

THE BADGES.

Just praise must be given to Mr. F. D. Mitchell, Secretary-Treasure of the American Hardware Manufacturers' Association for the badges. They were of three kinds, each of different color; red, white and blue. The red and blue were for members while the white were given to visitors and, as each badge in a gold framed white celluoid panel bore the name of the member, or visitor, formal or informal introductions were quite superfluous, and every one was at first sight practically "hail fellow, well met."

THANKS.

Readers of HARDWARE are greatly indebted to Col. J. R. Nutting of the Press Committee of the National Hardware Association and to Mr. F. D. Mitchell, Secretary-Treasurer of the American Manufacturers' Association for aiding HARDWARE in securing faithful reports of the various meetings.

ANNUAL BANQUET.

The Subscription Banquet by the National Hardware Association was given at the New Willard Hotel on Friday Evening November 10, 1905. All arrangements were in the hands of Mr. Fernley and his Committee headed by Mr. Jackson. It was a great success. There were 400 guests, 175 ladies and 275 gentlemen. Fifty distinguished gentlemen were sitting at the Speakers' Table. At each plate had been placed an imitation Door Hinge containing the Menu on one side and the Toasts on the other.

MENU.

Sauternes — Buzzard Bays

Consomme Printanier Royale

Olives — Celery — Radishes

Filet of Striped Bass Au Vin Blanc

Cucumbers — Cream Dressing

Claret — Sweetbreads a la Montebello

Mignons of Spring Lamb with Peas

Potatoes Duchesse

Sorbet National

Roasted Philadelphia Squabs Sur Canape

Salad

Ices in Forms — Petits Fours

Camembert — Roquefort — Toasted Crackers

Apollinaris — Coffee

Cigars and Cigarettes

ROBERT GARLAND,
OF ENTERTAINMENT COMMITTEE.

TOAST LIST.

"TRANSPORTATION".....HON. THEODORE E. BURTON
Chairman Committee on Rivers and Harbors, House of Representatives.

"DEPARTMENT OF COMMERCE AND ITS RELATIONS TO BUSINESS DEVELOPMENT,
HON. JAMES R. GARFIELD
Chief of Bureau of Corporations, Department of Commerce.

"FOREIGN OPPORTUNITIES FOR AMERICAN TRADE".....HON. OSCAR P. AUSTIN
Chief of Bureau of Statistics, Department of Commerce and Labor.

Toastmaster—MR. W. S. WRIGHT.

TOASTS.

After cigars had been lighted Mr. Bigelow, the retiring President of the Jobbers' Association, introduced W. S. Wright, his successor, as Toastmaster of the occasion. The new President of the Hardware Jobbers' Association then introduced the Speakers of the Evening.

He first called upon Mr. Birge to address the diners, who responded in his usual able manner.

Then Theodore E. Burton, Chairman of the Committee on Rivers and Harbors, House of Representatives, was introduced to speak on the subect of

Digitized by Google

TRANSPORTATION.

Mr. Burton prefaced his remarks by saying that his subject was one most intricate and full of detail, but expressed pleasure in the fact of speaking to men whose knowledge on this subject was practical, while his knowledge was more of a theoretical nature.

He said that the subject of transportation was assuming greater and greater importance. The reason for this was due to the fact that the American Consumer wants the very best articles of every kind and will go thousands of miles to get them. As a result there have been great improvements in transportation to satisfy the Consumers' desires. These improvements are now so vast that it costs no more to send a bushel of wheat from New York to Liverpool, a distance of 5,000 miles, than it did in the days of Miltiadas to carry a bushel of wheat from Athens to Marathon, a distance of fifteen miles. Hardware, he said, has taken the place of wheat. Raw material should be transported at cheap prices. This is going to be the age in which Iron and Steel will take the place of wheat.

A great deal, Mr. Burton, said, is to be accomplished by the rivers of the country. First, in carrying heavy material of low value which could not be carried profitably by the railroads. Secondly, in relieving the railroads in times of congestion. Thirdly, in creating a salutary check upon railroad rates.

In some localities this check has not been wisely carried out as it might have been and there are cases on record where a water was improved at a cost of $6,000,000 for the purpose of making a railroad costing only $3,000,000 behave itself.

We have one great advantage in this country, and that is, our rivers are free and, consequently, freight rates are lower. Different policies are pursued in different parts of the world. Germany, for instance, charges tolls on its rivers reasoning that, as the rivers lie in the most fertile, and richest portions of the country, the merchants along the water course ought to be willing to pay for this advantage.

QUESTIONS OF REBATES.

Mr. Burton then spoke of the railroad rebate question. "While there is a difference of opinion on this subject," he said, "we are all agreed that there should be no rebate granted to any favorite merchant or manufacturer. The rebate should be abolished whether it be open and above board, or whether it be furtively granted. Why? Because the very foundation principle of our country is equality. The principle in business is "equality of opportunity."

"There has been much misunderstanding in the matter of freight rates as regulated by the Interstate Commerce Commission. It is like a Kaleidoscope—ever changing—and what may be the proper rate to-day, may be desirable to change next year, and so on.

Statutory laws for "Long and Short Hauls" should be enacted."

Concluding his speech, Mr. Burton said that "the genius of the times runs too much in the way of money making, too much to gain, and too little to patriotism."

He was very emphatic in urging that the business man should take a little larger part in politics and in the government, as the influence he could exercise would be most potent.

"If you are content with grafters in office, there will be grafters there; if you want men as sturdy as the oak that is the kind of men in official positions. We will need not only men of genius, but men of efficiency. God save our country, the United States of America, for it is to it we owe our opportunities. It is our country that gives us our business."

It is not on material progress I congratulate you, it is because we are reaching a position where we are more respected for our spirit of justice than for our progressiveness. We may have exposures of graft, but our people are just as God-fearing as any people on the globe."

HON. WM. M. SHAW.

Secretary of the Treasury was then introduced. Mr. Shaw very briefly referred to the rebate evil. "I want to say to you beneficiaries of the rebate, the rebate ought to stop; will have to stop. (Applause.) I can tell by the applause who of you has recently asked rebates."

"Instead of trying to apply all the remedy and all the punishment upon the railroad, how would it do to apply a portion of it to the man who deserves it by methods, of course, always fair, who is the transgressor in the rebate business, who holds the temptation?

My own judgment is that there should be a law giving the government chance for curt action for twice the value of the rebate against the beneficiary of the rebate. The railroad company is not the only sinner in this country.

"In some instances if the railroad refuses to give rebate, is often blackmailed into giving rebate. Rebate must stop, and you can only stop it by applying the remedy to the beneficiary and the one that grants it."

Chief of the Bureau of Corporations, Department of Commerce,

HON. JAMES R. GARFIELD.

responded to the toast, "Department of Commerce and its Relation to Business Development."

He spoke of the department he represented as the "infant among the departments," but that it had "grown mightily during the few years of its life".

It was organized because there was great need of bringing the business interests of the country into closer relation with the Federal Government, and because in the development of trade and industry we were no longer bound down by geographical boundaries. Our trade had spread out, had become national, international, world wide.

The various Bureaus composing the Department of Commerce had to do not only with the commercial development and the commercial life of the nation, but also with the interests of manufacturers and of consumers as well as with the tabulation of results. To do effective work, they must have the hearty co-operation of the business interests of the country at large.

In the Bureau of Manufacturers, for instance, all manufacturers ought to be deeply interested. It deals with the distribution of our products in foreign markets, and how the commerce of the world should be brought to our own doors. This Bureau to help American manufacturers, interests itself in the avenues of trade into which manufacturers of Hardware may send the product o their labor; where manufacturers are needed and how to get them there.

The Bureau of Corporations, Mr Garfield said, did not exist for the invasion of private right, but rather to ascertain the exact conditions under which business is being done. Through this Bureau the Federal Government exercised the right "to protect our men against the wrong doing of another, and the Federal Government, while it recognized the individual's right, at the same time intends to impose upon every one individual obligation. Right and obligation, right and duty, go hand in hand."

We must change our ideas in regard to many of the great industries of the country. We are no longer as we were 25 years ago. In those days the individual asked in business as an individual. In these days the individual has given way to the corporation. Individual enterprise while yet large in some places and in some fields, is now but a small proportion of this country. The greater percentage of business is done under corporate form. Is it right that the corporation should demand for itself all the individual, while, at the same time, it does not assume all the obligations of the individual and does not perform the duties that the individual does perform?

This affords the reason for dealing with the corporation differently from which we deal with the individual.

Whatever the method of procedure, the property rights of the corporation must be protected the same as those of the individual, and, unless we strike at the root of the disease it is idle of effect and permanent cure.

We must get at the facts. To get at the facts the Federal Government must have the right to inspect the books of corporations to learn what they are doing, how they are doing it and what the purpose of their organizations are.

If corporations desire the advantages of corporate form they must be willing to submit themselves to their sovereign that created them, the Government.

This does not mean a paternal form of government. It is simply this which is a rule: A corporation by its power of wealth and by its practical influence, or whether it shall be ruled by the sovereign that created it.

This must be brought about by the hearty co-operation of all business men.

FOREIGN OPPORTUNITIES IN AMERICAN TRADE.

was the subject of the

HON. OSCAR P. AUSTIN,

Chief of the Bureau of Statistics, Department of Commerce and Labor. To Mr. Austin, one of the most encouraging signs of the times was the growing tendency for the various industrial and commercial interests to convene in Washington for their annual gatherings. It meant nothing less than a closer relation between business intrests and the Government.

He spoke of our commerce as follows:

"What industry of the world is to-day making the greatest advancement and the most rapid increase in its contributions to the conforts and conveniences and requirements of men the world over? Manufacturing. What nation is making the most rapid advance in its manufacturing industries? The United States. What group of industries among those designated as manufacturers shows the highest total of its products? Iron and steel. What single group of iron and steel manufacturers shows the largest value of products and the widest distribution of its productions to the people of the world. Hardware. What nation is showing the most rapid growth in its exports to the consuming world? The United States. What group of products

Digitized by Google

shows the most rapid growth in our constantly expanding export trade? Manufacturers. What class of manufacturers forms the largest item in that rapidly growing exportation? Iron and steel. What group of iron and steel manufacturers shows the largest total, the most rapid growth, and the widest distribution? Hardware.

Do you wonder, gentlemen of the National Hardware Association, that I deem it a privilege to speak to you on this occasion, upon a subject which is so constantly in my mind and nearest to my thoughts, the commerce of our common country?"

After speaking of the wonderful growth of the industries of our country and the relative advance made by the great industrial nations of the world, he continued:

"No barometer, it is said, offers so accurate a measurement of the prosperity of a country as that found in the production and consumption of pig iron. And if we accept this as a measure of business and industrial activity among the leading nations of the world we find new assurances that we are outstripping the other nations in industry and prosperity." . . .

"What has been the effect of this marvelous increase in the production and consumption of pig iron and all those higher grades of manufactures produced from it? First, there came a phenomenal increase in our railways and with this a cheapening in the cost of transportation. With this cheapening in transportation came a reduction of the cost of producing the various articles which you gentlemen and others engaged in manufacturing are supplying to our people. With this decrease in the cost of production and distribution came not only an increased home market, but also the power of manufacturing to supply a foreign market.

"As a result of this change in our power to supply foreign markets, the exportations of manufactures have trebled during the last decade, the exports of iron and steel manufactures have quadrupled and the exports of Hardware have more than quadrupled. The total value of manufactures exported in 1895 was $183,000,000; in 1905, $543,000,000; the total value of iron and steel manufactures exported in 1895 was $32,000,000; in 1905, $134,000,000; the total value of Hardware exported in 1895 was $8,000,000, and in 1905, $36,000,000.

HARDWARE EXPORTS A MERE TRIFLE.

"But even this exportation of Hardware, of iron and steel, and of manufactures, in which we take so much pride as Americans, is a mere trifle compared with our production, and with the surplus which we must expect that our factories will produce in the near future at the rate of increase which is indicated in the developments of recent years. The $36,000,000 worth of Hardware, the $135,000,000 worth of iron and steel, the $543,000,000 worth of general manufactures exported, must be doubled or trebled and finally quadrupled if you are to continue to expand your producing powers at the rate at which they have been expanding in recent years.

SOUNDS A NOTE OF WARNING.

"And here I want to sound a note of warning to you representatives of a great producing and distributing industry, and through you to the manufacturers and exporters of the United States generally. You must not expect that a great increase in the exportation of manufactures will be an easy task. You have rivals—busy, vigorous, experienced rivals—in the great manufacturing countries of Europe, countries with an industrial population receiving wages far less than those paid to the laboring men of the United States, and with a long and varied experience which enables them to successfully manufacture for the export trade. We take great pride in the fact that our exports of Hardware in 1905 were $35,000,000 in value; but what say you to the fact that Germany, with an area less than that of the State of Texas and a population but two-thirds as large as our own, exported in 1904 $37,000,000 worth of Hardware, and the United Kingdom, with a still smaller area and a population but half that of our own, exported in the same year $92,000,000 worth of Hardware.

"I say these things to you business men here and now because I am profoundly impressed with the feeling that the measure of success in foreign markets, which your manufacturing capacity will soon require, can only be attained by the adoption of methods new to us, but long followed by our more successful rivals in Europe. It has been my privilege in the past four months to visit a considerable number of the countries and colonies which are large importers of manufactures, and to study not only the origin of those manufactures which they import, but the causes of the greater success of our European rivals in those markets. In many of those countries I found the share which the United States is supplying of the imports of manufactures distressingly small and in some cases almost infinitesimal, while the share supplied by the great manufacturing countries of Europe is large and in many cases growing larger, while our own share is stationary or even decreasing.

We are taking pride as a nation in the fact that our exports to the Orient are at this time showing a remarkable increase, but it is a fact which we ought not to overlook, that our exports to the Orient and the growth in those exports occur chiefly in two or three lines of manufacture, while in the hundred and one other lines in which our varied industries ought to participate the market is largely and in many cases exclusively in the hands of our European rivals.

"The cause of our failure to participate in this great market for miscellaneous manufactures, not only in the Orient, but in many other parts of the world, lies chiefly in our unwillingness to manufacture goods in the form required by the foreign market. It is easy to say that we will educate the foreigner and lead him to accept the classes of manufactures which our own people find so unsatisfactory, and in this we have been successful, in some degree, in the European countries where tastes and customs of life are similar to those of our own people; but in those markets in which climatic conditions or long established custom have created demands for articles different in form and variety from those produced for our climate and people, we are making little progress in supplying the great mass of manufactured articles imported. Your manufactures of agricultural machinery and household requirements and Yankee notions sell readily in countries whose agricultural and household methods are similar to those of our own people, but in those countries where methods long established have accustomed the people to different and often more primitive articles of daily use, your agricultural implements and household requirements and Yankee notions are rejected. What is the result? Your European rivals, recognizing the fact that certain peoples, especially those of the Orient and the Tropics, demand products suited to their custom of life, stand ready to comply with those requirements and to produce in their factories the kind of goods demanded by those markets. They have long since given over the task of attempting to educate those markets up to the European or American standard, and instead have educated themselves to manufacture for those markets, to offer their goods through their own salesmen, and to sell them on terms to suit local requirements. As a consequence they are getting the trade—I might almost say the entire trade—of many of those markets, while the American manufacturer who relies upon filling orders from the stock of goods manufactured for the home market, is not only failing to obtain his proper share of those markets, but permitting them to pass absolutely into the hands of his European rivals.

These are serious questions ,which I deem it my duty to bring frankly to the attention of you manufacturers and exporters of the United States. The world's markets for manufactures call for between $4,000,000,000 and $5,000,000,0000 worth of finished goods every year, and of this we have been supplying up to this time barely 1 per cent. In many of the countries which are large consumers of manufactured products we supply but one per cent. of the total importation, while our European rivals, who study the markets and manufacture to meet local requirements, are supplying 40, 50 and even 60 per cent. of the total.

"It seems to me that these facts are of special importance to American manufacturers at the present moment. They have reached, in many cases, the point in their history in which they are able to produce in excess to home demand, and they should understand that the fields in which this excess must be marketed can only be successfully invaded with articles of the class required by those markets, and that the manufacturer who is unwilling to put his products into the form and method of packing required by Oriental or tropical communities and to offer them by methods common to the market will not only fail of success, but destroy the reputation of American manufacturers in those markets.

"I have great and abiding faith in the American manufacturer and American manufactures. The demands of our growing population are rapidly reducing the quantity of foodstuffs that we can offer for the outside world, and this reduction in exportation of foodstuffs should be met by a corresponding increase in exports of manufactures. Nature has given us greater supplies of manufacturing material than is possessed by any other country, our systems of turning these natural producets into finished manufactures are the best known, and our workmen hold first rank in skill and energy. We have already become the greatest manufacturing nation in the world, and I firmly believe that these industries will be so adjusted as to make us also the world's greatest exporter of manufactures."

ATTENDANCE.

The following is a list of those in attendance:

JOBBERS.

ALABAMA—J. D. Moore, of Moore & Handley Hardware Co., Birmingham; G. R. Vaughan, of Barney, Cavanaugh Hardware Company, Mobile; C. E. Thomas, of Wimberley & Thomas Hardware Company, Birmingham; W. M. Teague, Jr., of Teague & Sons, Montgomery.

ARKANSAS—Jas. Mandlebaum, of Fones' Bros. Hardware Company, Little Rock.

CALIFORNIA—W. E. Carrigan and C. W. Cause, of Dunham, Carrigan & Hayden Company, San Francisco.

CONNECTICUT—Col. R. S. Woodruff, of C. S. Mersick & Company, New Haven; W. A. Watts and Lewis H. Bronson, of Brnoson & Townsend Company, New Haven; L. L. Ensworth, of L. L. Ensworth & Son, Hartford.

POINTS ON COLLECTING.

A man's success as a collector frequently determines his success in business, for credit is the rock upon which more than one enterprise has been wrecked. But the easier a bill can be collected the less likely is a break with the customer. After years of experience and the trial of many methods I have found something like the following more successful and less expensive than any of the various schemes so frequently resorted to, especially in an agricultural district or among people who do not do a banking business. Some of it is old to all and all of it is known to some but it is in the combination of its details rather than in their uniqueness that I have found it worthy of more general adoption.

At the end of a reasonable time, or of a specified time, as the case may be, pay the customer a hurried visit, telling him you have some bills to meet by a certain day (which may always be true) that makes it necessary to collect in what outstanding accounts you can, and ask him to help you out to the amount of his. Many a man who is careless about paying his own accounts is a good hearted fellow willing to oblige some one else and that way of putting the case appeals to his pride and sympathy rather than his indignation. If he agrees to pay by the time specified, leave him with the feeling that you have no doubt in his so doing and that your own business worry has been to that extent relieved. Don't give the impression though that your finances are rotten—just temporarily tight.

Nine times out of ten he will do his best to meet the bill on time and if he finds that he cannot do so, the chances are that he will come frankly forward and say so, showing that he is in earnest. If he does, or if you have to call on him again, appear as friendly as before and with the same confidence in him but while he is in the midst of his regrets tell him that there is a way by which he can let you out of your pinch—that is, by giving his note which you can endorse and draw the money on from the bank. If he really means to pay he is almost certain to do this; if he does not mean to, the sooner there is an understanding, the better.

Circumstances should govern the handling of this note, only it is a good idea to have it in the bank's hands when due. You lose the discount on it but can better afford to do that than to lose a customer by taking harsh measures in its collection yourself. If it bears interest that is a partial compensation for the discount, though I usually prefer to draw it up without interest as it gives the customer the feeling that there is no attempt to "bleed" him.

When this note becomes due at the bank your customer may begin to realize for the first time that banking business is run on business principles and not for personal accommodations; in other words, that it must be met promptly. Here is a chance, however, to still further win the good will of your customer if he is not yet ready to pay. The chances are that he may not understand the difference between routine banking business and the original open account, hence, may be unprepared to pay when the time comes. For this reason I always prefer, instead of letting him originally give a note for sixty days to have him make it thirty days and then at the end of that time, if an accommodation to him, go to the bank with him and arrange for its renewal another thirty. This is for two objects. 1st, it gives him a little time to prepare for meeting the obligation after he finds that it is in a shape which must be taken care of. 2nd, he is less likely to feel that your entire interest in him ceases

Digitized by Google

as soon as you get your own money. Do not for a moment understand me to advocate signing notes for customers to keep their good will. I only mean to consider the obligation not held against him for goods purchased as still unpaid until the end of thirty days or sixty days, when the note is paid, and to always view it in this light in making calculations for the future.

One common fault with collectors is that they give too brief a notice at the start and either discourage the debtor or raise in his mind a feeling of resentment. The average debtor has not the money on hand and cannot raise it in a day or two where he might do so if he understood the special need two weeks before the time set for its payment. To give less time is frequently to make the note expedient a foregone conclusion where he might, with a reasonable chance to meet the occasion, settle by cash. To give him only a two or three day notice is sure to cause him a serious inconvenience if he really tries to pay and the more considerate you can be of his interests in matters which do not injure your own, the better and longer he will like you. Some collectors remind one of a picture produced in the comic press a few years ago wherein, "the kind-hearted tax collector" of ye olden time stands, rope in hand, considerately giving Rube five minutes to pay or be hanged. Rather let your first visit be ten days or two weeks in advance of the payment asked. Let everything indicate that you wish to be as lenient with your customers as circumstances will permit. The purpose of law has been defined as a systematic effort to make it as easy as possible for a man to do right and as difficult as possible for him to do wrong. By applying a similar principle to our bill collecting we may frequently remove from it some of its most disagreeable features and render it a means of cementing rather than of destroying the friendship of our customers.

LEGAL CORRESPONDENCE.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Law Editor "HARDWARE," No. 309 Broadway, New York City.

SALE OF VARNISH BY SAMPLE.

QUESTION: We ordered six barrels of varnish from a manufacturer from samples with which we have been previously supplied. In confirming our order, the manufacturer wrote to us, "these goods to be supplied the same quality as per sample barrels delivered." When delivered we found that this varnish was of an inferior quality to that which had been previously supplied us. May we refuse to accept the goods and if we accept them must we pay the contract price?

REPLY: On a sale by sample, if the goods do not correspond with the sample, the buyer may always return them and he is entitled to a reasonable opportunity of comparing them with the sample. If on inspection it appears that they are not of the quality wanted, the buyer may reject the goods at once. It is also generally held that upon an executory sale of goods by sample with warranty that the goods shall correspond with the sample, the vendee is not precluded from claiming and recovering serious damages for breach of warranty, though he has accepted the goods after an opportunity for inspection.

QUESTION: Kindly advise me through the Law Department of HARDWARE on the following:

(1) If I rent a flat to a man and reserve two (2) rooms and rent is understood to be fifteen ($15) dollars per month in advance and I have no lease with him, but it was understood at the time of renting the flat that he was to occupy it until April 1st, 1906, and he attempts to move before the expiration of that time specified, what redress would I have?

(2) I am a manufacturer of harness and I have erected a one-story frame building on a lot, the front of which I occupy as a store. If I were to move, can I move this frame building? The posts it sets on are in the ground. I used the building for manufacturing purposes.

REPLY: An oral lease for less than three years is valid in the State of Pennsylvania. But if the lease was for more than three years, it must be in writing to be valid. Assuming that your tenant's agreement was to occupy the flat for a term of less than three years, he is bound to continue during his term and if he moves before the time expires, you can hold him responsible for the rent of the premises at the stipulated price till April 1st, 1906, or you can relet them and hold him responsible for any loss resulting.

(2) The general rule is whatever is erected on the land belongs to the owner of the land. This rule is subject to some well-defined exceptions, among which is that of buildings, temporary and removable in character, erected by a tenant on leased ground for purposes of trade or manufacture. The law is that the tenant may remove such buildings at the expiration of his term, or, in Pennsylvania, within a reasonable time after the expiration of his lease and the surrender of the premises. It is always safer in any jurisdiction to remove such fixtures at or before the time the tenant goes out of possession of the premises. In dealing with such buildings the tenant must be very careful to guard against the renewal of his lease without any agreement concerning the buildings. If the tenant renews his lease without reserving his right to claim the building put on the premises, he thereby loses his title and his right to remove it.

LANDLORD AND TENANT.

Copyrighted 1905, by William C. Sprague, President The Sprague Correspondence School of Law.

NO. 7. THE EXTENSION OR RENEWAL OF A LEASE.

Where there is nothing stated as to who is to have the option on the extension or renewal, the law regards he provision as for the benefit of the tenant, and he, and not the landlord, is entitled to exercise the option.

If by the words used a landlord agrees to renew the lease at the end of the term, it is clear that the tenant has the option.

In order to entitle a lessee to a renewal, he must have performed the conditions on his part to be performed, as for instance, the payment of rent when due.

Where the agreement is that at the end of the term the landlord will give a renewal, the tenant is entitled to a new lease on exactly the same terms as the old one excepting as to the stipulation for renewal.

If the agreement is for a renewal on the tenant giving a certain notice, he must strictly comply with the condition or he will lose his right.

Where a lease gives a lessor the right to elect at the end of the term whether or not to renew the lease, such election may be made on or before the last day of the term.

Notice of a landlord's election to renew the lease need not be in writing unless the lease so stipulated, so long as the lease itself contains all the terms and conditions of renewal and the tenant is in possession.

It is not necessary as a rule for the lessor to tender to the lessee a new lease.

Where the tenant is to elect he should do so on or before the last day of the term and it would be well for him to have a lease prepared and present it to the landlord for his signature.

An agreement in a lease for the extension of the term does not require the making of a new lease at the expiration of the old.

A tenant is not required to give any notice of his decision to take a renewal unless the lease so stipulates.

The right to an extension or a renewal passes with the lease to any person to whom the lessee's interests may be rightfully transferred; so any one who purchases land after a lease has been made, is as much bound by the agreement for a renewal or extension as the original lessor.

A court of equity will enforce specific performance of a contract to renew or extend the term, or, the tenant may proceed at law for damages sustained by refusal of the landlord to renew the lease. In other words, the tenant has a right to choose whether he will proceed at law for damages or in equity for specific performance.

A general covenant to renew does not imply the right to a perpetual renewal, and under such conditions the landlord cannot be compelled to renew the lease more than once. Where the words were "this lease to be renewable at the pleasure of the lessee," a Pennsylvania court held that it implied the right to renewal for at least another term on the same conditions, at the pleasure of the lessee.

A provision in the lease that unless three months' notice of an intention to terminate it is given, it shall continue in force for another term of one year, and so on indefinitely, such notice to be given three months before the termination of any one year, it was held that the contract did not constitute a covenant for renewal, but that upon failure to give such notice the lease would continue in operation.

Digitized by Google

Where the lessee, "for a term of one year with the privilege of having same for three years at the same rate," covenants that at the end of said term he would deliver up quiet possession of the premises, and he continued in possession after the close of the first year, the court adjudged that he was held for the full term of three years. A New York case declares that if a lease provides for a renewal and no notice is required to be given and the tenant continues in possession after the expiration of the term of the old lease, this is equivalent to an election to take a further lease and entitles the tenant to hold the premises and demand a new lease.

Where the lease provides that there shall be a right of renewal on such terms as may be agreed upon by the parties, it is implied that the lease shall be at the same rent and for the same time, and the agreement is valid.

Where the landlord agrees in the lease, that before granting another lease to other parties he will give the tenant the refusal of it, the tenant can not assign his right to another.

In most of the states the covenant for a perpetual renewal will be enforced by the courts. The right to a perpetual renewal will pass to an assignee on the sale of the tenant's interest. In California it is held, however, that a covenant for a lease to run indefinitely, at the option of the lessee, is void as being against the policy of the law.

Where there are several lessees and one of them takes a renewal in his own name pursuant to the provisions of the former lease, he is held by the courts to hold the lease as a trustee for the former lessees. It has been held, too, that where there is no covenant of renewal and one of the lessees obtains a renewal in his own name secretly, the renewal inures to the benefit of all, so that where an executor buys the renewal of the lease that ran to his testator, he must hold it in trust for the estate. The same rule applies to any person occupying the relation of trustee for another. A lessor need not give a renewal where the lessee has not lived up to the agreements contained in the lease, or has committed waste on the premises.

MAMMOTH DINING HALL FOR WORKERS.

Meals Will Be Served for Ninety Cents a Week — Workers Will Dine Under Roof as Expansive as Canvas of Circus Tent.

One of the largest dining halls in the world is being erected in Dayton, Ohio, for the exclusive daily use of factory employees. This eating hall, when completed, will accommodate 4,000 persons at dinner at one time. When turned into an auditorium, as it often will be, it will seat an audience of 6,000 comfortably. This mammoth restaurant and lecture hall will be managed by the Men's Welfare League, an organization of workingmen of Dayton. Lunches will be served to 3,000 men a day on the average, while at least once a week the hall will be used as an auditorium for lectures or other forms of entertainment.

One of Dayton's biggest manufacturing concerns, which makes a machine used in nearly all retail stores, is erecting the building and will turn it over when completed to the Men's Welfare League. The League will manage the restaurant and furnish lunches to the workmen at bare cost of production.

LEAGUE WILL DO SERVING.

The building now nearly completed is 328 feet long and 100 feet wide. Besides the building the company provides furniture and dishes. The Mens' Welfare League contracts to hire help, purchase supplies and serve the meals. According to present plans the luncheons will be served for fifteen cents (15) per man or ninety cents (90) a week.

The Company will further equip the hall with an orchestrion, piano, stage and stereopticon outfit so that it may be readily utilized for lectures and entertainments as well as for the purpose of "feeding the multitude."

The Company submitted its proposition to the employees in a letter addressed to the Men's Welfare League. At a mass meeting of the employees held on the factory lawn a motion to accept the proposition was carried unanimously.

The opening of this remarkable eating establishment will be but a furtherance of the Welfare Work carried on for some time by this Company. Heretofore the Company has assumed all the responsibility, serving the meals in a temporary building at a low rate. The men having paid 75 cents or $1 a week according to their salaries, or from twelve to sixteen cents a day. The lunches have cost the National Cash Register Company upon an average of twenty-three cents apiece. From now on, however, the employees are to have full charge. They are to finance and manage the plant when once it has been installed.

HAS BROAD INTEREST.

Thus from two viewpoints the experiment has a broad interest: first, from the standpoint of size, and, second, from that of management. A dining hall with a 4,000 capacity is so unusual as to be almost unknown, while the auditorium with its 6,000 chairs is no less worthy of special notice. The greatest permanent auditoriums in the country, even those in New York and Chicago, do not surpass it.

The management of this undertaking presents features still more compelling in their interest, for they bear directly upon problems of adjustment between employer and employed. The conduct of this big dining hall by an association of employees will be an experiment in what co-operative effort on the part of laborers may accomplish, and as such will be closely observed.

Each noontime will present a remarkable scene. Three or four thousand persons, the population of a good sized town, taking luncheon together under a roof as expansive as the canvas of the biggest circus tent, will be a sight worth seeing. These tired and hungry factory workers will take their lunches amidst the best of surroundings, and all will be served well and quickly.

NEW LURES FOR THE FISH.

Could Isaac Walton, patron saint of anglers, return to earth and inspect a complete collection of up-to-date fishing tackle, he would probably recognize the usefulness of only a very small portion. Hundreds of curiously shaped and elaborately constructed devices have been added to the fisherman's outfit during the last few years.

Fine fishing rods reached the limit of the maker's skill years ago, and have since varied but little, except in length and finish. Expensive reels are no better to-day than when Meek and Milam turned out their famous "Kentucky" forth years ago. Having exhausted their ingenuity in respect to these, manufacturers have devoted their efforts to artificial baits, being encouraged by an army of anglers, and schools of fishes that have devoured with voracity each succeeding innovation in its turn. The impartiality of the fishes is the most remarkable as well as most necessary, feature of the success of some of these lures. Books have been written by great naturalists about the habits and food of finned creatures, but no explanation has been offered concerning a fish's anxiety to snap at a painted block of wood, a whirling nickel spoon, or a bunch of deer hair, none resembling in the least any of its natural foods.

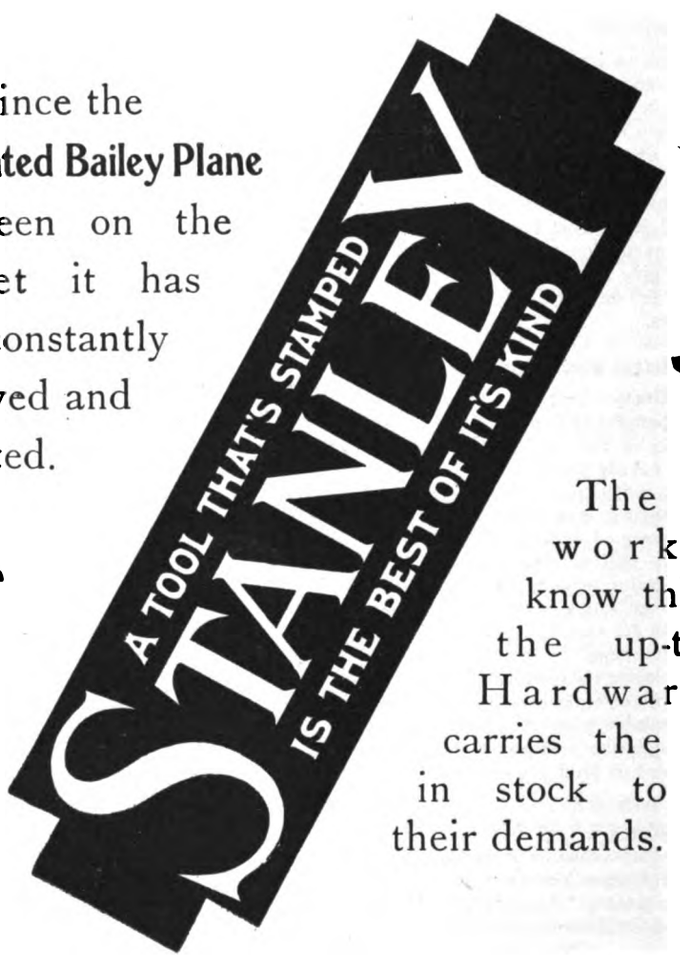
Anglers say that fishes become "wise" to artificial baits grown familiar with frequent use. However, this may be, new creations are forthcoming each season, each new arrival usually more freakish and startling than the last.

THE "COAXER" A NOVELTY THIS YEAR.

This year's novelty has been christened by its creator the "Coaxer," which truthfully claims to be an entirely new idea in its artificial lures. The coaxer bears some faint resemblance to a miniature, headless rooster, and is supposed to possess a mysterious fascination for fish. The body is of cork, painted white, a pair of red felt wings projecting from the sides and a red feather tail concealing a hook. This, the maker claims, will, when cast upon the bosom of the bass-inhabited water, arouse in the fish an appetite so ravenous that they will frequently leap from the water in their eagerness to seize it. Without undertaking to explain why, fishermen who have used it say that it is remarkably attractive.

A Kansas City enthusiast places all of his piscatorial fortunes upon a set of bass bait which he affectionately styles "The Big Four." The chief of these is a favorite of several seasons, known all over the Middle West as the "pork bait." An ordinary trolling spoon attached to a single snelled hook is supplemented by a narrow strip of salt pork, ornamented with a jaunty bow of red muslin yarn and attached to the hook. When this is drawn through the water the spoon whirls, the pork wiggles and the fish bites.

The next in importance begins like the pork bait, with a spoon, but trailing after this is a fluffy bunch of deer hair, or "genuine buck tail," bound about a hook. This is an elaboration of the "buck tail" lure that has been popular with the anglers for several seasons, and is one of the oddest of artificial baits. The third member of the "big four" group is a double metal spinner with a bright feathered "gang" hook attached, and the fourth is the conventional artificial fly, red, attached to the spoon.



Artificial minnows of wood and metal, rubber angleworms, crayfish, frogs and insects have found a place in tackle dealers' supplies for years, but have never proved highly successful. Strangely enough, these, which usually bear a strong resemblance to favorite fish foods, are not half so successful as baits in the "coaxer" class.

"There's no accounting for it," assert expert fishermen. "A game fish will 'strike' at one of these freak baits when he won't notice any other, even a living minnow. Whether the fish attacks them in anger or from hunger is a question, but the fact remains that they catch the big strings the country over.

THE GRANITE STATE MOWING MACHINE COMPANY, Hinsdale, N. H., are presenting to the trade their new catalogue of Lawn Mowers, which they claim are the lightest, easiest running and longest wearing machine on the market. The Granite State Lawn Mowers are made in styles A, B, C and D, and among the many other kinds of machines manufactured by this company are "The Queen," "The Queen Ball Bearing," "The New Ideal," "The Mystic," "The Rover" and "The Leader." They state that since the change in management, two years ago, when they purchased the old Newhall & Stebbins plant, who made the Granite State machine for over thirty years, they have remodeled their factory—increasing its capacity one-third, and, with the installation of efficient heating and lighting systems and up-to-date machinery, they are equipped, not only for making more goods than ever before, but for making them better. The catalogue is very attractively gotten up, and finely illustrated, and will be gladly sent to interested parties free upon request.

IT WAS HE.

Woman of the House (scrutinizing him sharply)—I believe you are the same dirty, worthless vagabond that was here last week, begging for something to eat.

Saymold Storey—Yes'm, I'm the feller. The cold biled ham I got here wuz the best I ever ett; an' I couldn't resist the temptation to come agin. That's why—thanky ma'am.—*Chicago Tribune.*

JAP-A-LAC

REGISTERED TRADE MARK

"WEARS LIKE IRON"

Do You Want A Thousand Wives

to buy a thousand cans of JAP-A-LAC? If you do, tell them so.

There are more than a thousand women in almost every community who want to buy JAP-A-LAC. It is a very simple matter to sell them if you let them know you keep it.

We spend enormous sums of money to get customers for you, but are not in position to take each one by the hand and lead her into the store. She will come in for JAP-A-LAC if she knows you keep it; you can then sell her other articles. Perhaps she has not traded with you before. Your courteous treatment of her the first time she calls may mean a PERMANENT CUSTOMER FOR YOU.

Try this method of securing new customers and see if we are not right.

Thirty-five of the most prominent, popular Magazines are carrying JAP-A-LAC advertisements every day in the year; your public sees these advertisements and wants to buy JAP-A-LAC.

Are you giving JAP-A-LAC all the attention its advertising justifies? Think it over.

THE GLIDDEN VARNISH COMPANY,

MAKERS OF HIGH-GRADE VARNISHES FOR ALL PURPOSES

641 ROCKEFELLER BUILDING,

CLEVELAND, OHIO

OHIO HARDWARE ASSOCIATION.

From Secretary Frank A. Bare we learn the following: On October 19th the Executive Committee of the Ohio Hardware Association held two sessions at the New Courtland Hotel, Canton, Ohio. At 2.30 p. m. the committee discussed some changes in constitution and by-laws that will be brought up for consideration at next convention, and routine business, including programme for the coming session in February, 1906. The committee regards the question box as the most practical and profitable feature of their meetings, and will give it greater prominence at their coming session than ever before. The secretary was instructed to ask every member in the State to prepare questions vital to his own personal business and forward same to the secretary by mail. These questions will be submitted to the Question Box Committee for discussion in convention. The great Auditorium Building in Canton was rented by the Executive Committee for the three days (February 27, 28, March 1, 1906) for holding their sessions and for exhibits. This fine building is ideal for their purpose. The sessions will be held in the Auditorium. The banquet will be given in that part of the auditorium known as the "Pit," already made famous by banquets attended by celebrated men of the United States. The auditorium is surrounded with rooms admirably adapted to exhibits by jobbers and manufacturers. The association will rent space in these rooms to exhibitors at reasonable rates. The committee believes that this arrangement can be made entirely satisfactory and profitable to both the retail merchant and the exhibitor, and at the same time overcome features that have heretofore been very unsatisfactory to all parties concerned. At 7.30 a joint session was held with a committee of Canton citizens, headed by J. B. Brothers, of the Canton Hardware Co. The Canton committee is deeply interested in the coming convention and proposes to sustain Canton's reputation for hospitality. Our members have every reason to look forward with great pleasure to the Canton Convention.

A DISTINCTLY AMERICAN IDEA.

After November 1st. "Charities" of New York, and "The Commons" of Chicago, will be merged. The combined weekly journal is a distinctly American idea—more or less of a co-operative undertaking among those who know conditions first hand and are shouldering such movements as housing the child labor reform, the prevention of tuberculosis, and the social utilization of public schools. The editorship will be in the hands of Edward T. Devine, of New York, and Graham Taylor, of Chicago. While neither periodical has heretofore gained a general circulation they have been read to a remarkable degree by editors, teachers, public officials, the executive officers of organizations, and others who get at public opinion of the community.

To develop this educational work along national lines, a publication committee has been organized with Robert W. deForest, former Tenement House Commissioner of New York, as chairman, and including Jane Adams and Margaret Dreier Robins of Chicago; Jacob A. Riis, Frank Tucker and Robert S. Brewster of New York; Daniel C. Gilman, Baltimore; Robert Treat Paine, Arthur E. Estabrook, Joseph Lee and John Moors of Boston; Simon E. Patten, Philadelphia; and S. N. Woodward, Washington.

VARIETIES OF INSURANCE.

"Many persons have perforce been compelled to read facts about insurance companies recently," said a general agent, "but I'll venture to say that not more than one person out of ten thousand fully realizes even faintly the astounding spread of the principle of assurance. The ordinary person knows only the life and fire lines which directly concern him, while the ordinary business man may be aware of the existence of other lines such as plate glass insurance, etc.

"Now, if there's anything in the sphere of human activities that is not covered by insurance it is because that object has been overlooked by the insurance promoter. Very soon I expect that insurance companies will write airship and submarine insurance in the interest of foolhardy aeronauts and inventors. Here's a list of lines now in existence that should prove a revelation:

"Fire, life, safe, rents, patent, marine, tornado, theft, credit, plate glass, transportation, tourists' baggage, accident, burglary, sprinkler, lightning, bank and messenger robbery, tailors and furniture floaters, postal, elevator, casualty, flywheel, automobile, physicians' and druggists' liability, travelers' samples, fidelity, official, guaranteed attorney's department, contract, judicial and court bonds, teams, help, leaseholds, contingent steam boiler, landlords' liability, use and occupancy, employers' liability, workmen's collective, liquor dealers' license, general liability, hold-up and bank account insurance.

"So you see," concluded the insurance agent, "if you have money enough to pay premiums you can practically cheat the decrees of fate."—*New York Herald.*

REVIEW OF THE MARKETS.

WIRE NAILS.—The buyers have been fearful of future delay in shipment of orders as heavy specifications were sent the mills during the month of October, and the trade have been urgent for greater promptness in delivery. The market has been noted for its firmness. Quotations are as follows: f. o. b. Pittsburgh, plus actual freight to point of delivery, 60 days, or 2 per cent. discount for cash in 10 days:

Carloads to jobbers	$1.80
Carload lots to retailers	1.85

New York. The demand does not seem to slacken in any way, but continues in a very encouraging manner. Greater difficulty seems to affect the average stock as the demand has made it difficult to keep up the assortment. The large orders given by the jobbers, previous to advancing conditions, create an amount of competition unlooked for. Quotations for small lots from store are $2.00 to $2.05 base.

CUT NAILS.—The recent meeting of the Cut Nail Association developed the fact that some manufacturers were disinclined to sell their product as low as the present quotations, advanced cost of raw material leaving too little margin of profit in the face of good demand. This, it is anticipated, will affect the market favorably. Quotations are as follows: $1.65, base, for carload lots, f. o. b. Pittsburgh. Iron Cut Nails for delivery at Pittsburgh, Buffalo and all points west of these cities are held at $1.75 base, in carload lots.

New York. On account of a good demand there is considerable difficulty in jobbers keeping stock well assorted. The action of some manufacturers at the recent meeting keeps the prices for small lots from store without change, regular quotations for which are on a basis of $1.90.

BARB WIRE.—Business in Barb Wire is still active and the demand is considered fair for the season. Prices continue firm and unchanged. Quotations are as follows, f. o. b. Pittsburgh, 60 days, or 2 per cent. discount for cash in ten days:

	Painted.	Galv.
Jobbers, carload lots	$1.95	$2.25
Retailers, carload lots	2.00	2.30
Retailers, less than carload lots	2.10	2.40

SMOOTH FENCE WIRE.—Orders have been entered on mill books for the wants of November and December, fully up to capacity. The specifications on orders being filled according to contract, giving the mills ample work to fill in addition. Quotations are as follows, f. o. b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads	$1.65
Retailers, carloads	1.70

The foregoing prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances.

SCREEN WIRE CLOTH.—Prices have been announced by the manufacturers which are virtually the same as those prevailing last year except on Regular Painted 12 mesh cloth, which is quoted 10 cents less than last year.

WIRE CLOTH HARDWARE GRADES.—Conferences among manufacturers have been held, which have resulted in an agreement to maintain same prices on Hardware grades of Wire Cloth as have been had during the past year, manufacturers conservatively declining to make advances, although higher prices were being quoted for raw material.

POULTRY NETTING.—The quotations now announced on Poultry Netting are somewhat higher than opened the last season. There has been a large and active business done hitherto in anticipation of this advance. The market is represented by a quotation of discount 80 and 10 on Netting that is galvanized before weaving, and 80 and 5 on the Netting galvanized after weaving. This has a tendency to make ruling quotations about 7½ or 10 per cent. higher than during the past season.

SPRING HINGES.—After conference between the manufacturers of this leading specialty, quotations have assumed a satisfactory basis, although the prices agreed upon are in a marked degree lower than prevailed last year. Under present conditions the retailer buying in fair quantities will doubtless be able to purchase Cast Holdback Hinges at from $6.50 to $7.00, while those made from Sheet Steel may be obtained for 25 cents less per gross.

WEDGES, ETC.—An advance of about 20 cents per hundred pounds has been made in the price of Wedges. A quotation of 2½ to 2¾ cents per pound will represent the market for Wedges in ordinary lots.

HEAVY HAMMERS.—The low prices prevailing on Heavy Hammers and Sledges for some time have terminated, and the manufacturers unite in quoting prices materially higher. In a general way the market is represented by discounts of 80 and 10 and 10 to 80 and 10 and 10 and 10 on the Heavy Hammers, and 80 and 10 to 80 and 10 and 10 on the Light Hammers, with an additional discount to the jobbing trade.

ROPE.—The following prices may be said to represent the market:

	Cents per pound.
Pure Manila, 7-16 and larger	12½
B quality Manila	11½
Pure Sisal, 7-16 and larger	9½
No. 2 Sisal, 7-16 and larger	8

LINSEED OIL.—The following quotations are announced on "City" Raw Oil by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....43 cents per gallon.
In lots of 5 barrels or more.....42 cents per gallon.

The "American" brand for respective quantities, 2 cents per gallon less.

The five-barrel price applies only to deliveries of that quantity at one time.

Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil.....60 cents per gallon.

THE ALBANY TRADE.

The fine weather that has prevailed of late has been favorable for business, enabling people from the outlying districts to come to market, thus helping to a great degree the dealers in both city and country. The excellent crops that have been harvested and are now being converted into cash provides means for the farmers to expend with the merchants. Everything connected with business seems to be in a very satisfactory condition in our territory. While possibly there is not the rush that we reported a month ago, yet there is a steady trade that appears to have come to stay. The holidays being near at hand will stimulate business in the direction of goods that are used largely for presents, this item now being a prominent feature with the Hardware dealer. The coming National Convention at Washington interests the jobbers very generally throughout the country and undoubtedly a large representation will be present and the usual good results will be realized by those whose business permits them to attend. The strength of the market on leading goods is very noticeable and this, together with the good trade reported, makes the situation profitable for most dealers, and the hope and probability is that the year 1905 will round up with the best results that have been reached in several years.

ALBANY HARDWARE & IRON CO.,
Chas. H. Turner, Pres't.

THE PHILADELPHIA TRADE.

The delightful Fall weather which we have had for so long is most enjoyable for living purposes, but is not conducive to an increased business, and from some sections we occasionally hear a word of complaint that trade is not altogether what it should be. These reports, however, are far between in number and most exceptional, as on the whole, the volume of business is in excess of last year, and as 1904 was largely a record breaker, there is no reason to complain of 1905. This moderate weather has lasted so long that we are now probably on the eve of a change, and as purchases of Winter goods have been somewhat delayed, there is every reason to expect a strong demand will set in for them immediately upon the advent of a lower temperature, and if such is the case there will probably be some difficulty in filling orders promptly, as manufacturers are now, in

Digitized by Google

many cases, behind on their orders and considerable delay is experienced in getting goods. With an advance in the market on raw material and heavy goods and with prospects of perhaps higher prices for material in the early half of 1906, the market is naturally strong and there is an evident tendency to advance prices on many lines. This feeling is wisely held well in check and manufacturers are apparently disposed to pursue a conservative course, and this, of course, makes a safe and satisfactory business. The market can, therefore, be described as in a promising and excellent condition, as there is entire absence of speculative buying and the goods bought are going directly into consumption. Biddle Hardware Co.

THE CLEVELAND TRADE.

The spirit of optimism is almost universal. It strains the imagination, if attempt is made to find cause for any opposition. Trade is good and the outlook excellent. Reform seems to be in the air, and resolutions to be good are encouraged by the sad plight of those who have neglected to be so. The intense ambition to be rich, with the vastly improved opportunities, have found the ethical standard too weak to bear the strain. Probably human history has never before furnished such temptations, unless it was that furnished by the devil on the mountain, and doubt about his ability to fulfill his promise may have modified the strength of that, while in our own time the funds are in the hands of the tempted to reward themselves. Legislation might have protected from such strong incentives to steal. If, as Dean Richmond says, "Every man has his price," Legislature might add the fear of the penitentiary to make the price high, but we may anticipate a forward movement in the next century, as we have the most magnetic leader the world has ever seen, who makes the ethical the basis of his action, and the spirit of such a leader is "contagious," so we have a right to be optimistic. October has been a record month for business, surpassing any October in thirty years.

The Lockwood-Taylor Hardware Co.

THE PITTSBURGH TRADE.

October proved to be the best month of the year compared with the corresponding months of 1904. Trade has taken on more of the snap of good times. Retailers are in much better spirits and willing to buy more freely than for some time past. There has been very large sale for all kinds of stoves this Fall. The demand is especially heavy in Gas Heating Stoves, which are now made in beautiful designs and very economical of fuel. A large terminal warehouse enterprise is nearly ready for tenants in Pittsburgh. Some forty warehouses are in the block equipped with every facility for receiving and shipping. The cost is said to be about four million dollars, so that rents cannot be low, but it is expected the saving to tenants in the way of hauling, heat, light, power and insurance will compensate. The location on the south side of Monongahela River is new for merchandising, but some of our best merchants have decided to make the venture and have taken up a number of the warehouses. Interest centers in the Hardware Convention of next week in Washington, where it is hoped much that is helpful to each other will be interchanged by the assembled merchants and manufacturers. Logan-Gregg Hardware Co.

THE SAN FRANCISCO TRADE.

The trade showing for the Pacific coast territory the past fortnight was most excellent and better than for some time. As long as buyers are scrambling over each other to buy the products of this territory, as they are in other sections of the country where the primal products are wool, cotton, wheat and corn, the iron and steel mills of the land will be taxed to their fullest capacity to fill the orders sent in to them, and our coke and coal industries will be worked to their limit for fuel, and good times will continue.

State Organizer F. B. Dickson of the California State Retail Hardware Association, said: "In company with Mr. Richards of the Studbaker Bros. Co., of Sacramento and Charles A. Rickets of the Sacramento Implement Company, I recently travelled the rich country in which Sacramento is located and found it half as big as my old state of Maine. Every Hardware firm in the country signed a petition declaring themselves in favor of the organization and before I got through with the country, a meeting of Hardware and implement dealers was held, a chapter of the State organization formed, and officers elected. Mr. Kimborough, of Sacramento, one of the oldest Hardware men in the state was elected president. He is a man of sound judgment, and the chapter surely made no mistake and by following his ideas will surely accomplish much good. Mr. Rickets was elected secretary. He is an untiring worker and one who has had great experience in the position of secretary. An excellent committee of three was appointed with Mr. Neubert, of Courtland as chairman. I enrolled many members of the Pacific Retail Hardware Association, to whose territory Sacramento belongs."

So far as manufacturers are concerned, demoralization is the word descriptive of the local market relating to the price of sash weights. The maintained price to contractors is now $25 per ton, a reduction from $30. One manufacturer went so far as to offer sash weights to contractors at $20 per ton at the foundry, but after a day or two trial prices were advanced to $22.50. This had a tendency to stir things up considerably among the builder's Hardware dealers who are firm in their stand in maintaining the $25 rate, claiming that they do not care for the business at lower prices and that the cheap weights are so irregular in weight that their stocks of uniform weights are cheaper at the maintained price, after taking into consideration the cost of handling the cut rate goods.

The California State Retail Hardware Dealers' Association has written the Postmaster-General protesting against the order recently promulgated by the Fourth Assistant Postmaster-General, in which all rural mail routes are to be designated by numbers, as such ruling will act solely in the interests of the Catalogue and Mail Order houses, and is certainly against the interests of all retail merchants and dealers. The effect of this ruling provides what is virtually a directory of every one receiving mail on such routes, and, whereas, it is against the rules of the Post Office Department to provide names and addresses of persons receiving mail on such routes, as by numbering the rural mail boxes all that is necessary is to have a memorandum of the number of houses served on each route, which can be easily obtained. We therefore most respectfully urge upon you, in the interests of the thousands of retail merchants and dealers of the country, that this matter be given your prompt and careful consideration, as such an order is inimical to their interests and can certainly benefit no one but the Catalogue House, and we earnestly request that it be rescinded.

Travelers report that a wire nail factory recently established at Vancouver, B. C., and operated by electric power, ships the raw product from England, and orders are coming in so fast that the plant is run to capacity. A shipment of two carloads went East last month; the Shaw Crucible Steel Company, of Hoquiam, Wash., has been incorporated for $100,000 by W. J. Shaw, J. A. Ringold, S. P. Wels and A. R. Witharn, of Cincinnati, to extract iron from the black sands of the ocean beach; Copper & Lead Smelting Company has been incorporated at Seattle for $5,000,000, by L. E. and L. T. Mathis, of Chicago, and H. A. Noble, of Seattle; Packard & Smith have bought the agricultural implement stock of the Crawford-Marshall Company, at Vancouver, Wash.; the Shaw Crucible Company is arranging to erect a steel plant at Damon's Point, Chehalis County, Wash., where black sands or magnetic oxides are found; the recent Portland, Ore., fire caused an $18,000 loss to the Air Tight Stove Mfg. Co., partly insured, and $200 loss to the Miners' Multnomah Machine Works, fully insured; the Excelsior Carbide & Gas Machine Co. will move its Spokane carbide machine manufacturing plant to Bellingham, Ore., and will build a carbide factory at the latter place; recent fire at Connell, Wash., the Connell Hardware Company loss was $20,000; insurance, $5,500, and that the company is rebuilding; C. C. Combes is erecting a store building at Lima, Wash., to be occupied by E. L. Minard & Co.'s Hardware and Stove stock; the Safety Latch Company has been incorporated with headquarters at Seattle, for $150,000, by Charles Sherman; the Moxie Hardware Company has succeeded Lonquet & Abeling, Hardware, at North Yakima, Wash.; Anderson & Lusby

LET ME DO YOUR COOKING

Why worry, watch and fret over a hot stove when you can put your meat, vegetables, custards — in short, the whole meal for the whole family, into my ample shelves and cook it, as food never was or can be cooked in any other way over ONE BURNER of stove, range, gas, gasoline or oil stove?

I come in both round and square shapes both kinds have whistles.

Prices $2.00 $2.50, $3.00, $4.50 up.

No watching; no basting; nothing overdone nor underdone; I am the

IDEAL

Combination Steam Cooker and Baker

made of heavy tin *or copper*, with ALL COPPER, seamless drawn tank; seamless top. No sharp corners on me to catch the clothing or hands or to retain grease and dirt. I BLOW MY WHISTLE 20 minutes before water needs replenishing; never go on a strike or talk back. I CUT THE COST OF FUEL and WORK IN HALF, save time and wear and tear on your temper and vocabulary. I hold 12 one quart cans in canning fruit. Write right now for

FREE BOOK---48 Pages

It tells you all about me Gives full details: letters from people all over the land who would not do without me for ten times what I cost.

have succeeded R. F. Anderson & Co., Hardware, at New Westminster, B. C.; the Taylor Hardware Company has bought Opp & Davis' Hardware and Implement store at Weiser, Idaho; A. A. Miller has succeeded W. H. Kellar & Co., Implements, at Rockford, Wash., and J. H. Hartshorn, lumber merchant, at Enterprise, Oregon, is adding a full line of Hardware.

INDUSTRIAL PRESS ASSOCIATION.

MINNEAPOLIS PROGRESSING.

There is nothing new that we can write you of the situation in this territory, excepting that we imagine our competitors in the city here must be exceedingly busy, as we have been practically out of business now for four weeks on account of our fire. Having not succeeded in getting adjustment of our loss yet, although we hope it will not be long before this will be accomplished. We have found that being fully insured for enough to cover the loss does not necessarily mean that we receive enough from the Insurance Co. to pay the actual loss, to say nothing about the loss through interruption of business. We are doing business in a small store near our former location and we hope within the next sixty days we shall be back in the old quarters. Practically nothing can be done until the Insurance matter is adjusted, so the goods can be moved to give the contractor a chance to do his work.

W. K. MORISON & CO.

THE OMAHA TRADE.

As to the prospects and promises of trade in our territory, we can say that from our standpoint, at least, they look very flattering, indeed, especially for the Winter trade and the early Spring trade. Business at this time is heavier than we have previously had at this season of the year, and prospects are for it to continue right on at the same rapid gait. Recent inquiries sent to our traveling men as well as to a number of our customers bring answers that indicate that the outlook from the retailer's point of view, covering almost all parts of the West, is that a very large volume of business will undoubtedly be placed by the consumers. This condition is doubtless aided by the large crops which have been gathered all through this section of the country, and the favorable prices which are being received for them. Since the early part of this year there has been an unusually large demand for all grades of Builders' Hardware throughout our territory. This demand also will doubtless continue well into the Winter or until cold weather stops operations. Taken as a whole, we can see no reason why 1905 should not wind up with a record breaking volume of trade.

WRIGHT & WILHELMY CO.

RECENT TRADE PUBLICATIONS.

THE FULTON MACHINE & VISE COMPANY, Lowville, N. Y., have sent us an envelope size catalogue, descriptive of their patent Vises adapted to machinists, locomotive works, structural iron builders, carriage manufacturers, guns, sewing machine, furniture manufacturers, jewelers and mechanics generally. They state, "These Vises are made from the best grade of iron, with tool steel pieces firmly welded to the face of the jaws." They guarantee the finish and workmanship of these vises to be the equal of any now upon the market. A Price List of Extra Parts is given which, with the descriptive matter and cuts contained in the pamphlet, will be found useful to those interested in this line. A circular regarding Slab and Edger Barkers is sent with the catalogue.

J. L. MORRIS STOVE REPAIR CO., Chicago, Ill., have just issued a catalogue of Stove Repairs, which contains descriptions and illustrations of the various parts of cooking and heating stoves, ranges and grates. Every stove is plainly marked with the name of the stove, name and address of the manufacturers, date of patent, and the parts are usually designated by some number, letters or characters that will facilitate the identification of same at the factories. The J. L. Morris Company publish separate catalogues of Hardware Dealers' Specialties and Windsor Steel Alloy Furnaces and heaters and they will gladly mail to the trade either or both of these, together with their best trade discounts or dealers' net price lists.

THE STEWARD & ROMAINE MFG. CO. and Philadelphia Expansion Bolt Works, Philadelphia, Pa., have recently published a very attractive catalogue shoying numerous cuts and giving complete descriptions of their Expansion Bolts, Toggle Bolts, Star Drills, etc., which will prove useful and instructive to those giving same careful perusal. They state: "Established since 1880 we are the largest manufacturers of these specialties in the world. Our products have always maintained a high reputation for quality and finish, and with our ample facilities we shall be able to meet the growing demand and thus justify the favors bestowed on us in the past." If you have not received a copy of this booklet the manufacturers will be glad to send you one on request. Ask for Catalogue No. 25.

THE R. E. CHAPIN MFG. WORKS, Batavia, N. Y., manufacturers of Galvanized Iron Specialties, are the authors of an exceedingly attractive catalogue, a copy of which has been sent to us. They state in introducing the same, "This catalogue has been designed for the purpose of giving the trade a clear and accurate description of the Galvanized Oil Cans and Tanks manufactured by us. We enjoy the distinction of being the pioneer manufacturers of Galvanized Oil Cans, and the attendant knowledge resultant from past experience has given us a prestige in this line not enjoyed by any of our competitors. Our work is thoroughly tested before leaving the factory and we employ skilled labor only."

The catalogue is printed in red ink on excellent paper, is very well arranged, and contains a number of illustrations. If you are interested send for one.

THE PITTSBURGH TOOL AND DROP FORGE CO., Cheswick, Pa., have recently published their new catalogue and price list of Railroad, Track, Contractors' and Miners' Tools. In commending the "Cheswick" Solid Steel Tools to the reader's consideration, they state: "You have our guarantee of their worthiness, and we will replace, free of any expense to you, any tools proving defective." The catalogue contains numerous illustrations of Axes, Augers, Bars, Chisels, Drills, Hammers, Jacks, Mattocks, Mauls, Sledges and Wedges, and many other kinds of steel tools, and prices are quoted on same. For further information write for catalogue.

THE LANSING WHEELBARROW COMPANY, Lansing, Mich., manufacturers of Wheelbarrows, Warehouse Trucks, Steel Scrapers, Hand Carts, Fence Machines, Horse Pokes, Hods, Skids, Rubber-Tired Wheels, etc., are presenting to the trade their new catalogue and price list, which is a very comprehensive production, carefully prepared and arranged, containing very full descriptions and over two hundred illustrations of these goods. They state that when the company was organized in 1881 they manufactured but three styles of wheelbarrows, and the fact that they are now the largest manufacturers in this line in the country is undisputed evidence of the excellent quality of their goods. Inserted in the catalogue is a folder showing panoramic views of part of the extensive lumber yards and plants now owned by the Lansing company, bearing proof that "a growth based on honest endeavor to produce quality, to emphasize the good, to avoid error, is permanent and carries within itself an impetus for continual advancement." If you are not already in possession of one of these very interesting books write for catalogue No. 8, and one will be gladly sent on request.

HOW TO USE THE POCKET CARD INDEX ADVANTAGEOUSLY.

"The salesman can save himself considerable leg-wear," says a writer in the *Business Man's Magazine*, "by systematically routing up his calls in each town. Most salesmen do this mentally, or from a kind of force of habit. But it's better to get it down on paper somehow and leave your head free to inculcate new ideas. That's what it's for, and not for indiscriminate storage purposes. There is manufactured and put on the market by some thoughtful genius a pocket card index device that strikes me as an excellent thing for this purpose. A small file of cards is carried in a convenient pocketbook and the cards are transferable to another file which is carried in the grip.

"The names of all the firms you call on should be entered on these cards in ink by regular routes so that your calls can be made one after the other in regular order and you know just when you are done. Space could be left after each firm name in which you enter little memorandums in pencil, before you start out, if there is anything in particular that you want to speak about or take up, or as a record of the call after it is made. This little data which you can put down at odd moments while you are waiting for a buyer or when on the street car going from one customer to another, will free your mind of a lot of trifles that need to be remembered for various reasons, and fix you so that you can fill out your report sheets almost without mental effort after the day's calls are made.

"These little jottings, if allowed to remain until they are replaced by the record of the next call, will bring to mind many a little item that may be made use of in making the next call effective in business getting. Then if a member of the firm should ask questions about a customer on whom you had called the cards would be very likely to give the answer."

Yankee Notion Sleeve Board

PATENT APPLIED FOR

READY FOR USE

TURNED OUT OF THE WAY

THE BEST YET

We present herewith an improvement on any Sleeve Board yet produced. Reference to the cuts will show how easily it is turned out of the way when not in use. By disposing of it in this manner there is no danger of its falling down and hitting the person ironing; it also gives the use of the entire length of the ironing table to which it is attached, as it is so low down when turned back that the elbow of the operator will not hit it, and ironing can be done right up to the clamp.

The entire clamp and support for the YANKEE NOTION SLEEVE BOARD is made from MALLEABLE IRON and cannot break. The thumb screw for attaching to the Ironing Table has cut threads which make it work easily and smoothly.

The YANKEE NOTION SLEEVE BOARD will be an easy seller, as every woman who sees it will see its advantages over all others. We furnish the *tops* of these boards either plain or covered.

TRIBULATIONS OF CONSULS.

EXTENT AND VARIETY OF DEMANDS MADE.

In the following report Consul Halstead, of Birmingham, England, conveys an idea of the multiplicity of demands that are constantly being made upon consuls. He writes:

There are no severer critics of American export work than those Americans resident in England who have acquired through rough experience a knowledge of what is necessary in the conduct of business here when handling articles of American manufacture. Unfortunately their criticisms, while vigorous, are not of the assistance they should be to American manufacturers who wish to sell goods here, because it seems natural to the man who stays at home to believe that those who, with experience, oppose his inexperienced views as to the method of conducting a foreign business have become alienated.

It may be of interest to report what an American of the "hustling" type, who has had a number of years' experience in Great Britain, largely devoted, and often successfully, to the introduction of American articles, wrote me in reply to my inquiry as to whether he wished additional agencies for American goods. Naturally, I am anxious to be in touch with Americans of this type, for I am often at my wits' end as to where I can refer some of the many inquiries which Americans send me. In nearly every case I know when American manufacturers write me they wish to have certain articles put on the English market, there would be a profitable sale for them in this country if proper methods for their introduction were employed. I know also that if I write to a merchant or dealer in the line regarding an American manufacturer's desire to do business here there will be correspondence on the subject between the firms, but feel quite certain, at the same time, that the ideas of the American and Englishman as to how the matter should be arranged will probably differ so greatly that they cannot come to terms.

We Help Dealers Sell Blount Door Checks

TO push a line or not to push a line—that's the question. It's often decided in the negative because the Dealer has not time to study up plans—no time to mould the shot. In selling Yale & Towne Blount Door Checks, we furnish the AMMUNITION—booklets, blotters, folders, seals, envelopes, display cards, and a crisp little story called "The Peacemakers"—most of them imprinted with your name and address.

We lay the plans—a little booklet, "Suggestions for Selling" tells just WHAT to do and HOW to do it. YOUR part is to pull the trigger.

We help you ADVERTISE in newspapers too—send you electrotypes of advertisements that SELL goods—or write you special advertisements if you wish—furnish you street car cards, etc. All this is FREE if you write and ask for it.

The Gillette Safety Razor--

Has the FIRST, and only NEW idea in RAZOR BLADES for OVER FOUR HUNDRED YEARS

Exact Size Complete Razor.

Although on the market for less than two years, the **Gillette Safety Razor,** judging alone by actual sales, is to-day used, appreciated and endorsed by *more* enthusiastic, discriminating shavers during this time than *all* of *the rest* of the so-called safety razor purchasers in the same period.

There is a reason for the success of the **Gillette Safety Razor.**

It is as *different* from other *so-called* safety razors as *other so-called* safety razors are from the old-fashioned razor.

The dealer who handles the **Gillette Razor** makes *liberal* profits, for the fixed retail price of $5.00 for a set *is*, and *will* be *maintained* under U. S. Patent laws, thus assuring every dealer a full profit.

The blades are as thin as paper, as hard as flint, as tough and flexible as whalebone.

The Gillette Safety Razor is made by *automatic machinery insuring perfection* and *uniformity* in every detail and a never varying quality which is so often found in the old-fashioned hand-make razors and blades.

The Gillette's Advantages

Our manufacturing facilities have been increased recently to meet the enormous and growing demand for the **Gillette Razor,** and this demand proves that it will certainly pay YOU to investigate at once the many advantages that are now offered in handling this phenomenal shaving device which is the talk of the civilized world.

Remember -- The Gillette while having *many imitations*, has no direct competitor, *is in a class by itself*, is here to stay, and its patents will be fully protected and all infringements on its rights will be prosecuted.

TWELVE BLADES.

TWENTY-FOUR SHARP EDGES

A Paying Proposition

No shaving proposition to-day offers you the inducements that the Gillette does.

Write to-day for further particulars and do not allow yourself to be persuaded to do otherwise by other *so-called* safety razors that have been put on the market, due solely to the phenomenal success of the **Gillette Safety Razor.**

Gillette Sales Co., 1104 TIMES BUILDING, BROADWAY, NEW YORK CITY.

Digitized by Google

Are You A Gillette Safety Razor Dealer?

Then you will receive the benefit of the enormous advertising plans that are now being worked out, embracing Magazine publicity, Signboards, extensive catalog distribution, and in fact, *every known* and *up-to-date* method in the science of advertising.

By our publicity methods we are interesting and appealing to *millions* of shavers *every* month.

We are *spending more money* in *making known* the unique advantages of the **Gillette Safety Razor** than is being spent by all the combined, *so-called* safety razor manufacturers in the country, which benefits every Gillette dealer.

That this advertising is producing the desired results is a fact which we will prove to every **Gillette** dealer to his entire satisfaction.

If you are not selling the GILLETTE SAFETY RAZOR, Get into line, for once in it, means you are there to stay.

The "Gillette" cannot be put together in any way but the right way, and when so put together the blade is concaved and both edges are in the right position in their relation to the guards to be used with absolute safety.

Exact Size Set, Complete.

Greater Profits--- Greater Satisfaction

There are not only greater profits in handling this razor, but greater satisfaction because the **Gillette Safety Razor** is fully guaranteed, is backed by *responsible* and strong financial interests, and the razor itself is already endorsed by several hundred thousand users who are voicing its merits throughout the civilized world.

You see **Gillette** advertisements everywhere, and up-to-date dealers are joining our ranks every day.

Do not delay, but write us *at once* and let us show you evidence of such a nature that will make you regret the delay which for some reason unknown to us, has resulted in your name not being on our list of dealers.

ADDRESS TO DAY.

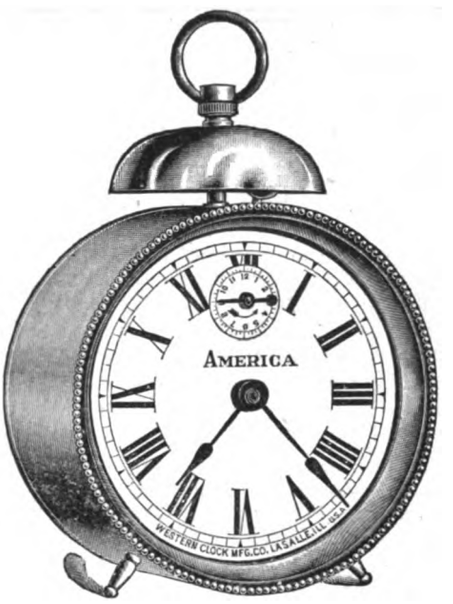
PACKING

Appearances count with your customers. Razor strops left hanging on racks or in open cases to collect dust leave a poor impression with your trade.

GIBFORD'S RED-E-FOR USE RAZOR STROPS



are packed in handsome boxes which, beside protecting them from dirt and grit, give a distinctive character to your cutlery counters and convey the idea of the quality of your goods to your customers. RED-E-FOR USE razor strops are right in price as well as in quality. Order a sample dozen from your jobber and you will make 12 satisfied purchasers.

Write for our descriptive catalog. It's filled with information you need in selling razor strops.

Gibford Mfg. Co.

Adrian, Mich.

The America Alarm

Gives you an opportunity to offer a clock, accurate, efficient, guaranteed, at a remarkably low price and is sold at a figure that leaves you plenty of room for profits. Your jobber has the "America."

The Western Clock Mfg. Co.

La Salle, Ill.

Boston, Mass.—Dyer Axle Nut Lock Co. has been incorporated; capital $5,000: incorporators, Edwin C. Stevens, Charles P. Dyer and Robert E. Buffum.

Buffalo, N. Y.—The Arrow Ventilator Co. has been incorporated to manufacture and sell ventilators. Capital $10,000. The directors are John C. Roth, John J. Welshofer and Jas. C. Cushing.

Chicago, Ill.—The Independent Pneumatic Tool Company, the recently organized opposition to the combine in pneumatic tools has begun its aggressive trade campaign. The company's works are at Aurora, Ill., and the main offices in the First National Bank Building, Chicago.

Detroit, Mich.—The Detroit Tool Co. has been incorporated with $5,000 capital stock. The incorporators are William D. Holmes, Jay W. Morrison and Harold N. Holmes.

Dover, Del.—The Cast Steel Neeme Beam Co. has been incorporated to engage in the manufacture of improved tools. The capital stock is $100,000.

Hartford, Conn.—The Capitol Foundry Co. has been incorporated for the purpose of manufacturing tools, implements, machinery and castings, with capital of $30,000. F. W. Stickler, F. H. Wilmot and A. F. Tanner of Waterbury are the incorporators.

Hoboken, N. J.—The Apex Cutlery Co., has been incorporated; capital, $100,000. Incorporators—Elizabeth V. Guinan, Herman R. Hoppe, Joseph L. Hoppe.

Hoopeston, Ill.—Green Corn Husker Co. has been incorporated with a capital of $25,000. They will make manufacturing implements and machinery; incorporators, Jay Briggs, John Kofel, Charles S. Crary.

Horseheads, N. Y.—The Thomas Hibbard Co. has been incorporated to manufacture Hardware and Hardware supplies; capital $9,000. Incorporators: Elmira and Alice M. Hibbard, Josephine Edington.

Indianapolis, Ind.—Advance Machine and Supply Co. has been incorporated to manufacture, buy and sell Hardware, tools, etc. Capial stock. $10,000. William Williams, George W. Williams, Lewis Wallace.

Kane, Pa.—The Kane Cutlery Co. has been incorporated. Capital $25,000.

Marion, Ind.—The Scott National Radiator Company has been organized and incorporated for $25,000. Among the officers of the company are: Rev. Elwood Scott, president; Dennis Haisley, vice-president; Elmer R. Scott, secretary, and Robert Smith, business manager.

New York.—The Salamander Grate Bar Co. has been incorporated to manufacture grate bars and furnace castings; capital, $2,500. Incorporators: Mary E. and George H. Clarke, Harvey R. Mitchell.

Omaha, Neb.—The Jubilee Mfg. Co. has been incorporated with a capital stock of $100,000; incorporators, A. F. Cole, L. W. Burdick and P. A. McKenna. The company will engage in the manufacture of self-heating sad irons, gasoline generators and vapor burners.

Oneida, N. Y.—The Coles Tool and Machine Company has been incorporated. Capital $10,000; directors Theodore Coles, F. N. Coles, J. B. Becker.

Philadelphia, Pa.—The M. T. B. Washington Manufacturing Co. has been incorporated, objects, to manufacture all kinds of cutlery, steel and iron goods; capital $25,000; incorporators, T. B. Washington, J. S. Tracy, Joseph H. Neal.

Toledo, O.—The Stimson Mercantile Equipment Company, producers of all kinds of meat scales, coffee grinders and so on, has been incorporated. The incorporators are Walter F. Stimson, E. H. Stimson, Peter Donnelly, B. C. Bowen and Arthur W. Weaver; capital $25,000. The company will handle the entire output of the Simpson Standard Scale Co., of Milan, Mich.

Utica, N. Y.—The National Heating Appliance Co. has been incorporated with $15,000 capital stock. The company will manufacture heating appliances patented by W. G. Sholes of this city. The directors are F. R. Switzer, F. M. Penney and W. H. Switzer. The heating appliance consists of a large plate, which is placed in the firebox of a stove or furnace, a few inches above the level of the coals. It is perforated and the gases of the coal are allowed to pass the perforations and are then consumed.

Winnipeg, Man.—W. C. Wilcox, Ltd., has been incorporated for the purpose of manufacturing all kinds of tools and machinery. Capital stock is $200,000. The incorporators are Wm. H. Meneray, W. C. Wilcox, Henry Veasey, Thomas Sharpe, Geo. A. Metcalf.

Yonkers, N. Y.—Stillman Safety Lamp & Heater Co. has been incorporated. Objects, manufacturing lamps, heaters and stoves; capital $150,000. Incorporators: Robert W. Jones, Thomas Roberts, George Jordan, New York City; Frederick G. Murken, Hoboken, N. J.; John H. Somerville, Edgewater, N. J.

Changes and Improvements.

Bowling Greene, Ohio.—The Standard Manufacturing company, late of Norwalk, has been added to Bowling Green's swelling list of industries. A new factory will be commenced at once. The new company manufactures all kinds of iron specialties, and will be manufacturers and sole agents hereafter for the Slocum small hoisting machine, a new device which will do small hoisting. The new company is re-organized with a capital stock of $50,000, of which $40,000 is paid up.

Franklin, Pa.—The Coleburn Machine Tool Company is making extensive improvements on its plant. An addition 100x30 feet, is being erected, which will be completed in about a month. The building will be used as a pattern shop and stock room with a view to making more room in the main building.

Hartford, Conn.—The Capewell Horsenail Co. has purchased the Maritime Nail Works at St. John, N. B., as the duty in Canada is prohibitive against the product of the Hartford factory, it has been necessary to secure plants in Canada. One was established in Toronto earlier in the year, and the new purchase will be used to supply the maritime provinces.

Hartford, Conn.—The Pratt & Whitney Co. has purchased a plant in Dundas, Ont., for the manufacture of small tools.

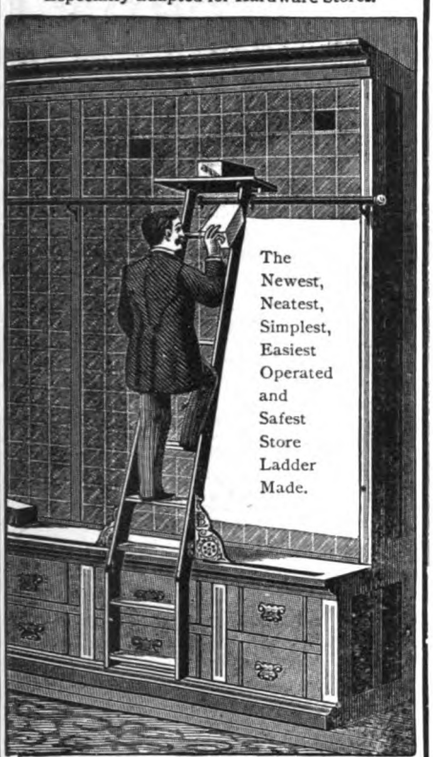
New Albany, Ind.—The American Range Co., which has been located at Cleveland, Ohio, will soon begin operations here. A. C. Pope will be at the head of the company.

Detroit, Mich.—The Rowley Scale & Supply Co.'s capital has been increased from $10,000 to $15,000.

Royersford, Pa.—The Buckwalter Stove Co. is erecting an extensive addition to its already immense plant. A building 80 feet by 120 feet will be added to the present moulding room, including a new and much larger cupola house and other minor buildings which may be required to properly equip the plant. This firm has just finished the erection of a large six-story brick addition.

Syracuse, N. Y.—The American Sawmill Machinery Co. of Hackettstown, N. J., and the J. G. Pierce Co., of Boston, Mass., have established a new warehouse here. Both companies manufacture wire nails.

Toledo, Ohio.—The Automatic Screen Co. has purchased the Detwiler Mill and will remodel it for a manufacturing plant.



Walden, N. Y.—The capital of the Schrade Cutlery Company has been increased from $25,000 to $40,000. The officers of the company are: Pres. George Schrade; Vice Pres, Philip Hasbrouck; Sec., I. H. Loughran; Treas., J. Louis Schrade.

Worcester, Mass.—The Whitcomb-Blaisdell Machine Tool Company has acquired the property of the Draper Machine Tool Company, whose plant adjoins that of the Whitcomb Manufacturing Company now controlled by the Whitcomb-Blaisdell combination. The new owners of the property will assume possession at once, conducting the plant with few changes in the near future, as an integral part of the Whitcomb-Blaisdell Machine Tool Company's properties.

ASBESTINE SHINGLE STAINS

Because they are money-savers to home owners.

Every man wants his house or barn or other buildings to be attractive. He also wants to get the best and longest service out of them. For these reasons he will be interested in

ASBESTINE SHINGLE STAINS

These stains improve the appearance of a building 50%.
These stains are made in all shades to harmonize with any color of paint used on the building.
These stains are for a protective covering over the shingles that prevent rotting and warping and will last for years
These stains close all cracks and nail holes and prevent a roof from leaking.
These stains render shingles impervious to weather and double the life of the roof.
These stains contain nothing poisonous that will dissolve, hence rainwater caught from a roof finished with them is perfectly safe for drinking and washing purposes. Write For Sample Fan.

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Arcola, Ill.—Retail Implement and Vehicle and Hardware Dealers' Information Bureau has been incorporated for the promotion of business; incorporators: T. G. Wiles, M. D. Thompson, F. K. Allen.

Lowell, Mass.—Crown Sporting Goods Co. has been incorporated to deal in sporting goods; capital $10,000. President, James J. Jolly, Danvers, Mass; treasurer and clerk, Abram E. De Normandie, Danvers, Mass.

Middletown, Conn.—Goshen Cart Company has been incorporated to manufacture vehicles; capital $6,000; directors, C. W. Post, Thomas Whatte, H. J. Miller, Jr.

New Brunswick, N. J.—Middlesex Motor Co. has been incorporated to manufacture automobiles, motor cars, bicycles and bicycle parts; capital, $50,000. Incorporators: H. Clark Saunders, Louis A. Voorhees and Charles A. White, all of New Brunswick, N. J.

New York, N. Y.—Parker Process Co. has been incorporated to manufacture Hardware, motors, dynamos, etc.; capital, $10,000. Incorporators; William H. Harrison, Clifford R. Wright, Ferdinand S. Crasley.

Changes and Improvements.

Asherville, N. C.—Penniman Bros. & Co., whose vehicle business was formerly conducted by the R. Cruzen Co., of Paxton, Ill., has been taken over by C. A. Nordgren, who for several years has been the owner of practically all the capital stock of the company.

Bradford, Pa.—Phillips & Hamilton, manufacturers of motor cycles, have dissolved partnership, the latter retiring from the business.

Briston, Conn.—The New Departure Mfg. Co., makers of coaster hubs and other cycle supplies, has now in operation a branch plant near Berlin, Germany.

Columbus, O.—W. C. Wetherholt, who for a number of years has been connected with the Columbus Sporting Goods Co., has formed a partnership with W. E. Evans under the firm name of W. E. Evans. Wetherholt & Co., their store being located at 63 Gay street, where a full line of sporting goods will be carried. Fine repair work on guns, fishing rods, etc., will be a specialty, Mr. Wetherholt being exceptionally expert in this line.

East Alton, Ill.—The Equitable Powder Mfg. Co., which is independent of the trust, has during the past few months expended $100,000 in the establishment of a manufacturing plant near Fort Smith, Ark. The site includes a tract of 240 acres purchased a year ago, and it was intended to have the plant in operation soon after the present year, but on account of the extremely severe weather of last winter work was unavoidably delayed for several months.

Fonda, N. Y.—The Johnstown Baseball Manufacturing Company has opened a branch factory here.

Jackson, Mich.—H. B. Crosier, dealer in sporting goods, has removed to a large store building, where he will carry on a more extensive business.

Kalamazoo Mich.—The William Shakespeare, Jr. plant, producing fine fishing tackle, is now settled and located in the new building at the corner of Rose and Water streets. Four floors, with an aggregate area of 10,000 square feet, are devoted to the production of the various Shakespeare specialties. A general line of rods is the result, including split bamboo, lancewood, greenheart—in fact, rods of all kinds and description, barring steel.

Meridan, Conn.—H. E. Loll, the popular sporting goods dealer, has rented a new store. In the new store there will be seen all sorts of toys for the Christmas trade, while the present store will be used for sporting goods only.

Meriden, Conn.—The Meriden Firearms Company is getting ready to enlarge their plant by building several new additions. About January 1 they will get out several new patterns of guns, some of them being of a more elaborate order than heretofore.

New York, N. Y.—Francis Bannerman, of No. 570 Broadway, will occupy, some time in November, the entire five-story building at No. 501 Broadway, near Broome street, as soon as the necessary repairs and changes adapting the building to his purposes can be effected. Mr. Bannerman has long made a specialty of all kinds of military goods from government auctions, etc., ancient armour, firearms and other implements of war.

Springfield, Mo.—Harry Teed and Frank Murphy have gone into the bicycle business.

Topeka, Kan.—L. B. Wyman has sold his automible and bicycle store to Charles Matthews and Paul Mulvane.

Waltham, Mass.—C. H. Metz, maker of motor cycles that bear his name, has consolidated his business with that of the American Motor Co., Brockton, Mass., who manufacture the Marsh machine, the Brockton concern assuming all of Metz's debts and book accounts. Metz acquires a substantial interest in the American Motor Co., and will have an active part in its management. The consolidation was brought about, he says, because of his lack of adequate facilities to take care of increased trade.

Wilmington, Del.—The DuPont Powder Co. is said to be negotiating for a tract of about 1,800 acres near Littleton, Col., on which it will erect an extensive powder plant and magazines.

Miscellaneous.

In the legislatures of the different States, this winter, a determined effort is to be made to carry through bills prohibiting the use of automatic shotguns in hunting birds. This movement is being organized by the New York Zoological Society and the League of American Sportsmen, who have appealed to the public for funds to carry on the work. Supporters of these measures allege that automatic shotguns, of which five new models have been put on the market recently, are a distinct menace to the wild birds of America. These guns have been prohibited in almost all European countries.

Little Falls, N. Y.—A petition in bankruptcy has been filed by Olin W. Tafft of Little Falls,, who has liabilities of $2,884.70, of which are secured and assets of $1,688.20. The local creditors are William Harrison, $169.29; Utica Cycle Company,$66.97; Roberts Hardware Company $39.94.

Now that the shooting season has opened in Oklahoma and Indian Territory there is a boom in paper suit cases. All the sporting goods houses have put in lines of these glued together articles. They are now a part of the well regulated hunters outfit. Under the Walmsley law, it is a misdemeanor to import quail and almost every other kind of bird into the state. The hunters, who have no mind for leaving great bags behind them, buy these cheap suit cases and use them for game bags. These they put under seats in railroad cars other than their own, prepared to disclaim them if any inquisitive deputy state game warden should happen to smell feathers. A cheap case does as well for the job as a sole leather affair, and, in view of the fact that they may have to be abandoned, is really very much better than the more expensive kind.

Fires and Explosions.

Derby, Conn.—Fire in the factory of the United States Rapid Fire Gun & Powder Co. did $1,000 damage.

Goes Station, Ohio.—An explosion causing a loss of about $3,000 occurred recently at the Miami Powder Co.'s plant. Fire started in the motor house adjoining the glazing mill, to which it communicated, and eventually reached the corning mill, exploding in all about three tons of powder. Several minutes elapsed between the discovery of the fire and the resultant explosion, permitting the employees to escape.

St. Joseph, Mo.—Fire which had its origin on the third floor of the three-story brick building at 216 South Fourth street, occupied by the Akhurst-Eberly Arms Company with a large stock of sporting goods, gutted the two upper floors of the building and resulted in losses estimated at $13,000. R. H. Akhurst, president of the company, said that he is unable to make an accurate estimate of the firm's loss until the stock on the first floor is overhauled. He is of the opinion that it will not be far from $13,000. The company carried about $20,000 insurance on stock.

WANTED — Superintendent for large stove works. Should possess technical knowledge, including electrical, which can be applied to development of each department, and thereby improve quality and reduce cost of manufacture. Applicants need not necessarily have been engaged in stove manufacturing business, but should have had experience in manufacture of finished iron products and thoroughly understand foundry and machine shop work, be able to look after buildings and equipment and handle large force of men. Executive ability must have been proven. Location, Eastern States. Age 35-45. Salary $2,500, up to start. Hapgoods, Suite 511, 309 Broadway, New York City.

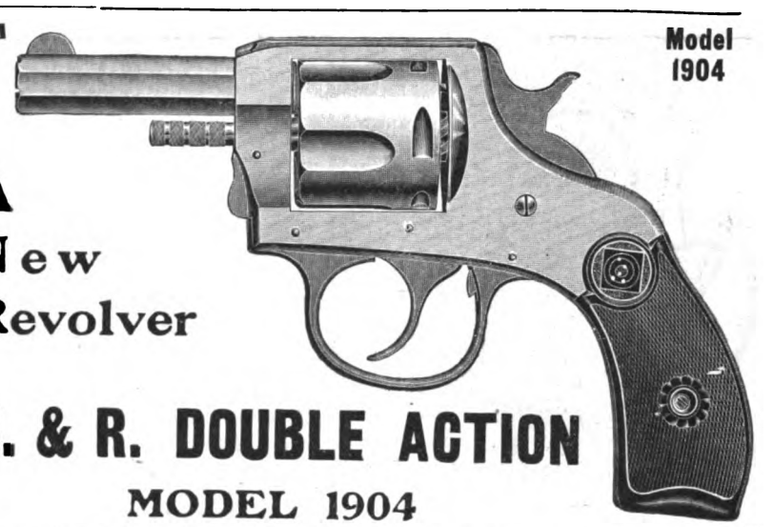
SUPERIOR

IN MORE THAN NAME.

Superior Floor Spring Hinges

combine compactness with great strength and efficiency without impairing these advantages in any degree.

They occupy less floor space than other floor spring hinges and their construction is such that the tension is most easily adjusted *without* the use of *a special tension key*. A most important feature in making sales. The hinge works on Superior ball bearings which insure easy and noiseless action.



SUPERIOR DOOR HOLDERS

are so made that they adjust themselves to every inequality of the floor or carpet without injuring them in any manner.

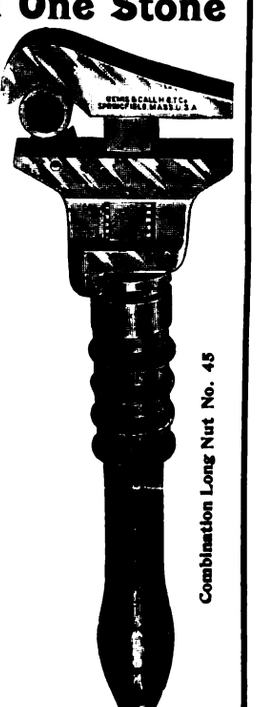
To Buy A BEMIS & CALL PATENT COMBINATION WRENCH

Adjustable "S" Wrench No. 48



It is half a dozen wrenches in one; does any kind of work a nut wrench is expected to do, and covers the ground equally well for pipe work. Strong as the strongest—head, bar and shank all one piece steel forging—and the most convenient tool you can have in your kit.

IMPROVED ADJUSTABLE "S" NUT WRENCH

Its adjustable jaws gives it a great advantage over the ordinary "S" wrench. Sliding jaw is easily adjusted with one hand, and has a full bearing on the frame when open to its widest capacity.

It is strong and durable; operating nut of steel; sliding jaw a steel drop-forging. Particularly useful in confined and awkward places. We also make this style wrench for pipe work.

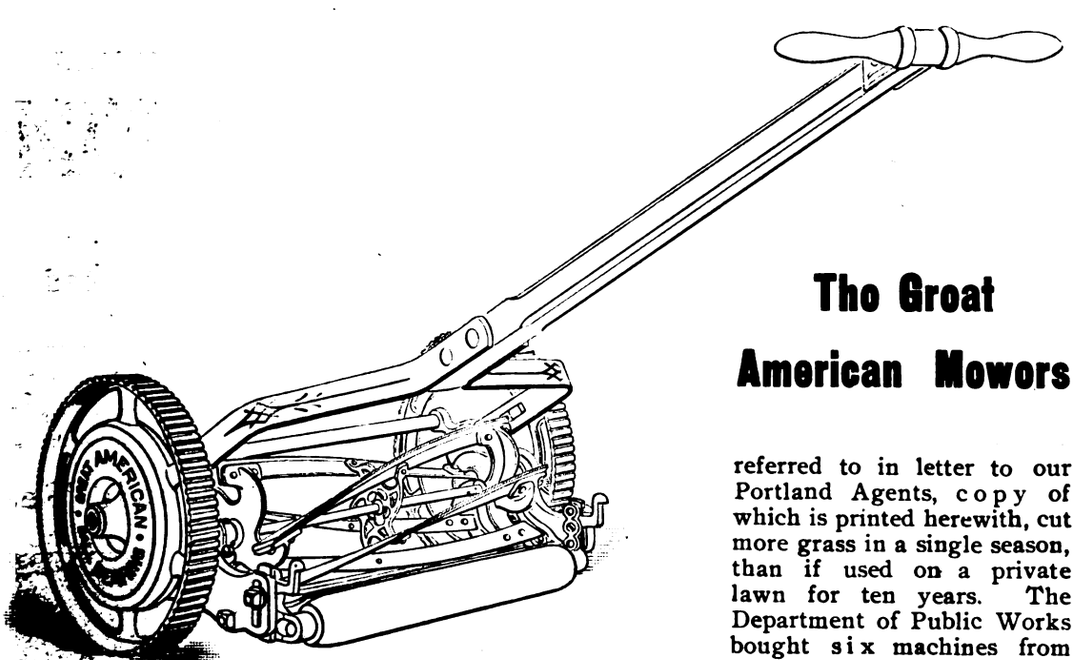
SUPPLEE HARDWARE COMPANY

PENNSYLVANIA LAWN MOWERS

LEWIS AND CLARK CENTENNIAL EXPOSITION

DEPARTMENT OF PUBLIC WORKS



Portland, Ore., Sept. 2, 1905

HONEYMAN HARDWARE CO.,
Portland, Oregon.

Gentlemen:

The Great American Lawn Mowers purchased of you for use on the Fair Grounds have proven entirely satisfactory. They have been in use ten hours a day during the entire season, and have never required resharpening or cost one cent for repairs.

Yours truly,
JAMES PENDERGAST,
Head Gardener.

The Great American Mowers

referred to in letter to our Portland Agents, copy of which is printed herewith, cut more grass in a single season, than if used on a private lawn for ten years. The Department of Public Works bought six machines from each of the three leading Hardware houses in Portland. In less than a month the only Mowers in use were the Great American and these six did the entire work for the balance of the season. YOU CAN'T JUDGE A MOWER BY THE PRICE OR PAINT. Buy one with a reputation.

SUPPLEE HARDWARE COMPANY

Goodell Mitre Box

Made Entirely of Steel

Most desirable box on the market, being way ahead in quality and improvements.

No More Breaking

You couldn't buy a better mitre box for the money—nor sell so good a box for the same price.

Be convinced : Send for circular and prices.

GOODELL MFG. CO. Greenfield, Mass.

New York City representative, JAS. L. NEEFUS, 52 Dey Street.

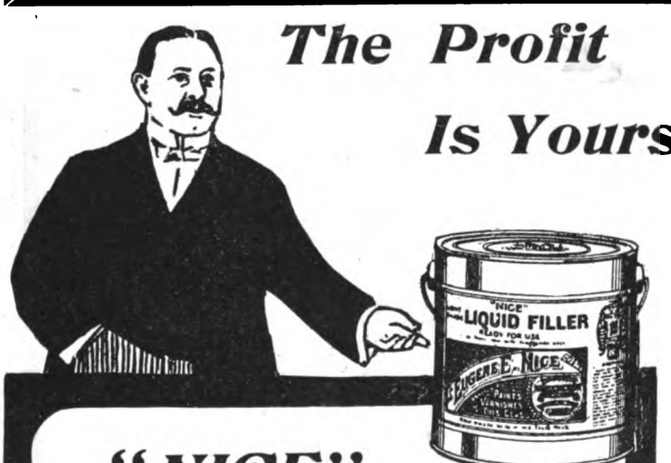
Eastern Agent, JOS. F. McCOY CO., New York.

ALL WHO DRIVE IN WINTER

should have **Clark Heaters**

They are made for carriage, wagon or sleigh.

You can supply them at a good profit. **CLARK HEATERS are indestructible. They always sell and satisfy.**



CLARK COAL is the greatest of all heat makers. Each cake is guaranteed to burn longer and give at least 25% more heat than any other coal ever made.

Write your jobber about these goods. Send us a postal for our new catalog showing 19 styles of heaters, from $1.75 up.

CHICAGO FLEXIBLE SHAFT CO., 106 LASALLE AVENUE, CHICAGO.

The Profit Is Yours

"NICE"

and "Yellow Seal" Liquid Wood Fillers

are so well established, their superior qualities so generally recognized by all Painters and other large users, that it is indeed a short sighted Dealer who fails to carry them in stock.

You Can Command The Filler Trade

of your section with these brands on your shelves and on every sale not only realize a good profit but secure a pleased customer.

Write us.

EUGENE E. NICE,
PHILADELPHIA.

ECONOMY

Vs.

Wastefulness

Wouldn't You mend an otherwise substantial chair if only worn out in the seat?

Of Course you would. Most every one of your present customers would do the same.

Universal Chair Seats

can be fitted to any seat-less chair with a pair of shears, by anybody.

They are better and cheaper than Cane or Leather---more durable than either.

A postal will fetch our profitable proposition. Mention Hardware.

Standard Carriage Heaters

have attained their widespread popularity by reason of their

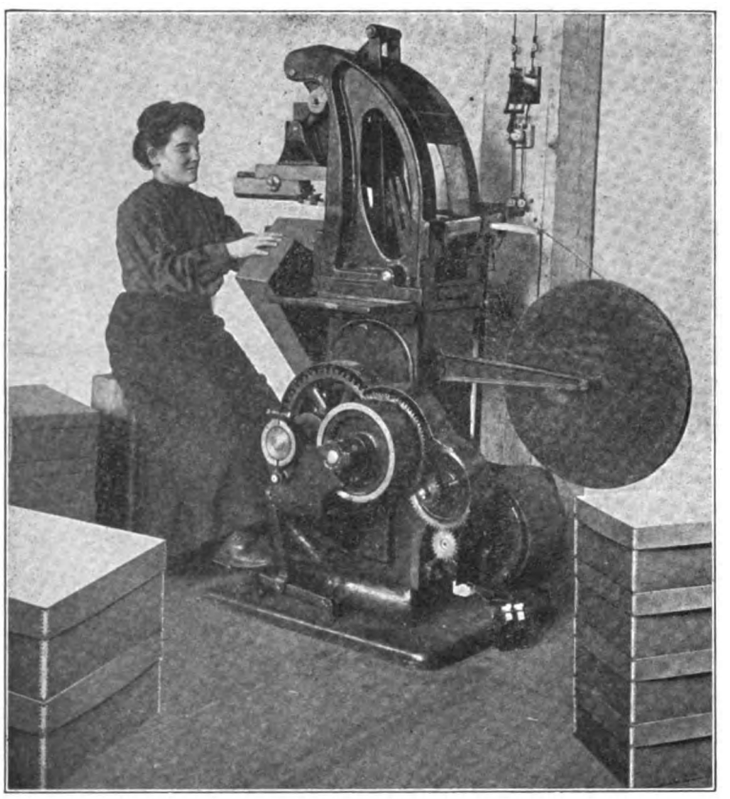
Attractive design and finish;

Superior method of ventilation,

And minimum cost of operating.

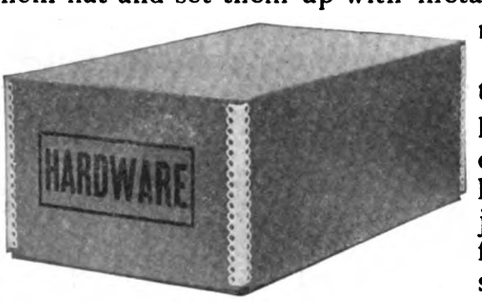
This season they will be still more popular; we are giving

Free to Dealers



a handsome embossed metal rack, lithographed in colors, for displaying Standard Heaters on counters, in show windows, etc.

Don't fail to get our proposition at once.



You will find these racks an invaluable aid in selling, as the goods are constantly before the notice of your customers.

The
STANDARD STAMPING CO.,

Marysville, Ohio.

The most economical way of handling paper boxes is to buy them flat and set them up with metal stay on our Automatic Machine. Machine is automatic, but not complicated. Any boy or girl can handle it—only one adjustment to change from one size box. to another

Our faith in machine and the plan is indicated by our offer of three months' trial. If the machine is returned, we take back any portion of the metal stay that may be left.

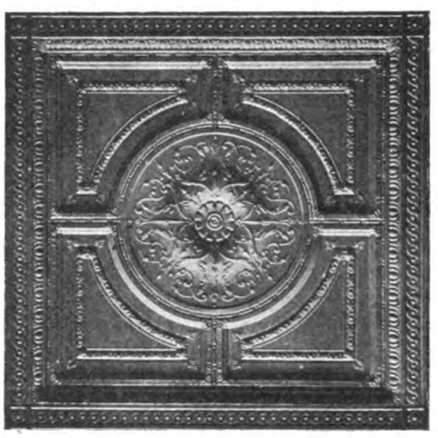
Metal Ceilings--Which?



Turn anywhere--North--East--South--West--and you will find thousands of pleased customers swearing by Northrop Metal Ceilings because the

Original Northrop Metal Ceilings

Are unequalled in sharpness of stamping, simplicity of construction and architectural fineness.

Remember: If you'll send us the particulars about any room, we'll submit drawings and prices.

Name anything you wish in the way of metal ceilings, or walls for rooms of any size, shape, kind or purpose and the Original Northrop Metal Ceilings will fill the bill.

The latest and the best designs in metal ceilings are finely illustrated in our new catalog. You ought to have a copy.

Every Hardwareman ought to handle Northrop's Metal Ceilings because any mechanic can put them up.

A Thanksgiving Proclamation

L. & G.
Stag Handle Carvers

Have carved turkey for more than a half century for all sorts and conditions of men. For this we give due thanks.

Users everywhere—North, East, South, West—proclaim L. & G. Carvers and Carving Sets Best.
Same with scores of dealers who have handled them for 35 years. They will buy no others.
To appreciate fully how splendid and complete our line is send for our catalogue. Mention Hardware.

LAMSON & GOODNOW MFG. CO., Shelburne Falls, Mass., U. S. A.

New York Office, 45 Murray St.

You have never yet found job lots of STAR Hack Saw Blades on the market for the reason that they did not prove good enough to dispose of in the regular way. No such Star Blades have been made and we do not expect that there ever will be.

It is true that they have all the time become better and better, and probably will continue to do so in the future, as we are constantly experimenting and watching for opportunities to improve them.

Never since we commenced making blades have we been farther in the lead, both in quality and popularity, than right now. Our intention and expectation is to hold this position in future.

Hack Saws are put to hard usage and dealers will serve their own and their customers' interests by supplying the best made.

MILLERS FALLS COMPANY

It Makes No Difference

what particular kind of shooting you are interested in—sportsmen differ as to make of guns, advantages of various loads, etc., but sooner or later most of them come to the same opinion about ammunition—that

Peters Shells and Cartridges

have all the other makes beaten in the race for quality and results. See what they have recently accomplished in the three chief departments of "the game":

RIFLE

At Sea Girt, N. J., Aug. 24.—Sept. 9, LIEUT. TEWES won the Wimbledon Cup Match, the Grand Laflin & Rand Aggregate, the Seabury and N. J. Members' Matches; LIEUT. CASEY won the Inspector's Match, and LIEUT. SMITH the Reading Match—all using Peters .30 U. S. Gov't Ammunition.

In the Spencer and Seabury Matches LIEUT. CASEY made a total of 20 consecutive bull's-eyes.

In the Wimbledon Match seven of the first ten places were won with Peters Cartridges.

PISTOL

The Pistol Championship of the United States competed for Sept. 1-11, was won by J. A. DIETZ, of New York, scoring 465 out of a possible 500 with Peters .22 Stevens-Pope Armory Cartridges, Standard American Target, 8-In. Bull's-eye, distance 50 yards.

At Sea Girt, N. J., Aug. 24.—Sept. 9, THOMAS ANDERTON won the All-Comers, Any Revolver, and Jones Matches, and LIEUT. STEDJE the disappearing Target Match, all with Peters Cartridges.

SHOT-GUN

The Consolation Handicap at the Grand American, June 30, was won by JAS. T. ATKINSON, score **99 out of 100,** using Peters Ideal Shells.

First Amateur Average at the Cincinnati Tournament, Sept. 19-21, won by R. S. RHOADS, using Peters Shells.

First General Average at the Indianapolis Tournament, Oct. 9-10, won by L. H. REID with the phenomenal score of **392 out of 400,** using Peters Factory Loads.

THESE RECORD SPEAK FOR THEMSELVES. COMMENT IS UNNECESSARY.

PRICES CURRENT

The prices in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

GET BUSY

That is the one secret of success in the Hardware trade. The rapid sales and quick turning over of capital that

A Line of Arcade Goods

will produce is a revelation to Hardware dealers, and there is a reason for it. Consumers know the excellent quality that the name Arcade signifies. They know that it stands for the highest satisfaction and greatest efficiency that their money can buy. It is this knowledge that makes them demand Arcade Goods when they are in need of any of the 300 articles we manufacture.

To prove their unquestionable merit to any doubting dealer we will send a sample of any article desired.

We show on this page four articles that are money-makers for the dealer.

The Crystal Coffee Mill

THE CRYSTAL COFFEE MILL with glass hopper and tumbler. This is the most perfect mill made and with it the most discriminating customers may be interested. Its superior advantages are appreciated on sight.

THE JEWEL COFFEE MILL with glass canister holding one pound of coffee. This is a companion of the Crystal, but sells at a lower price. A liberal dose of these two mills will prove a tonic to your coffee mill trade.

The Jewel Coffee Mill

You can satisfy every requirement of your trade with one of the sixty different styles of wood, glass and metal mills which we manufacture.

THE FAMOUS GEM is known to housekeepers everywhere as the one dependable mop head. It is made of the best steel and equipped with the latest improved spring adjustment. It is a most durable, saleable and profitable article.

The Gem Mop Head.

THE EIGHT SPACE SPICE CABINET is made of hard wood in natural finish. It is strongly built to withstand the roughest usage. Each compartment is labeled and fitted with iron pulls. The general effect is one that appeals to the careful housewife.

GENUINE

Philadelphia Lawn Mowers

STYLE E, HIGH WHEEL

A Point of Excellence

in this style is its solid frame: The Box caps to cylinder cutter and the cutter itself can be removed without disturbing frame.

Made of iron and steel. Has 4 blades, 10 inch wheel, 6½ inch cylinder train of 3 gears, double ratchet.

ANOTHER:

Philadelphias are the Mowers "with a go." They sell when other kinds fail to sell. They have the name for bestness.

Be convinced, get our catalog to-day.

Philadelphia Lawn Mower Co.

3101–09 Chestnut St., Philadelphia, Pa.

SUPERIORITY

L. & I. J. White Co.'s Edge Tools have been marketed for nearly three quarters of a century.

It requires, therefore, no second glance to determine their superiority over any others on the market.

Thousands of skilled mechanics use them to-day because their fathers used them before them.

If you are not handling White's Edge Tools—is not that a good reason why you should?

Get our catalog to-day.

The L. & I. J. White Co.

BUFFALO, N. Y., U. S. A.

OAK RUBY

PARLOR STOVE

For Hard Coal, Soft Coal, Coke or Wood. Made in three sizes, with or without inside fire-pot.

Heavily nickel-trimmed it makes a most handsome appearance and makes it a ready seller.

Not all Washers are what they appear to be But—

"A Look Behind The Scenes"

substantiates our every claim for

The Imperial Rotary

It excels because it is excellent in every respect:
Construction,
Capacity for good work,
Easy operation,
Noiselessness.

Its sliding cylinder on square post makes it the strongest Rotary on the market. All Steel Roller Bearings give it speed and make it noiseless.

Tub extra large.

All castings in Gold and Aluminum Bronze.

Handsomely finished.

Our catalogue tells of the rest of our line.

Get it to-day.

Blackstone Mfg. Co.
Jamestown, N. Y.

Every Hardware Dealer

recognizes that an advertised article i four t mes easier to sell than an unadvertised one.

We have appropriated this season a good many thousand dollars for advertising our products in the large papers and magazi' es of national r putation. You are certain to have calls for:

The Hartmann Stockade Wire Fence
The Hartmann Steel Picket Fence
The Glen Steel Folding Mat

If y ur stock on these goods is low just drop us a line. You can't help selling them and run no risk in stocking up.

A Long (K)Night In HARDWARE

¶ For years retail hardware men have been groping in the dark, looking for some efficient way to increase their business—some of them have found it!

Warren's Patent Sectional Glass Front Shelving

is designed and manufactured by a Hardware Man for Hardware Men.

¶ You can keep a line of samples of your entire stock on exhibition at all times.

¶ It preserves each article in the same attractive newness that it comes from the factory, prevents *dust, rust, finger-marks and dirt.*

¶ It enables you to sell goods to a *German*, a *Scandinavian* or *any* other foreigner who, even though he cannot speak English can *point* to what he wants.

¶ It improves the appearance of your store *100 per cent;* enables your salesmen to spend their time *selling* goods instead of *hunting* for them, and will *pay for itself in one year.*

¶ Send dimensions of your store and let us supply you—FREE—with a color plate made to scale showing how *your* store will look when equipped with The Best Shelving in the world for your purpose.

¶ Remember the shelving is made on the unit plan—If you want to experiment—don't wish a complete outfit now—you can buy one—two—three stacks or sections—the rest will follow as your satisfaction increases.

WE MAKE CLERKS ACCURATE

Each clerk's sales are added separately on this counter. Separate counters under this hood give separate totals of charge sales, money received on account and money paid.

A new and complete system for credit sales, money received on account and money paid out.

This counter shows how many customers each clerk waited on during day.

If there is a mistake of fifty cents in this drawer, or a counterfeit coin or bill, you know that "D" clerk made the mistake.

This counter, under lock, tells proprietor any minute how business is running.

Under lock is private record of each sale and clerk who figures in each transaction

A receipt printed automatically goes to every customer. Shows amount, kind and clerk who made transaction. This receipt enforces proper record of every cent taken in by each clerk.

This counter shows total number of customers waited on during the day.

This drawer belongs to clerk "E." Each clerk has his own individual cash-drawer.

A Square Deal

— FOR —

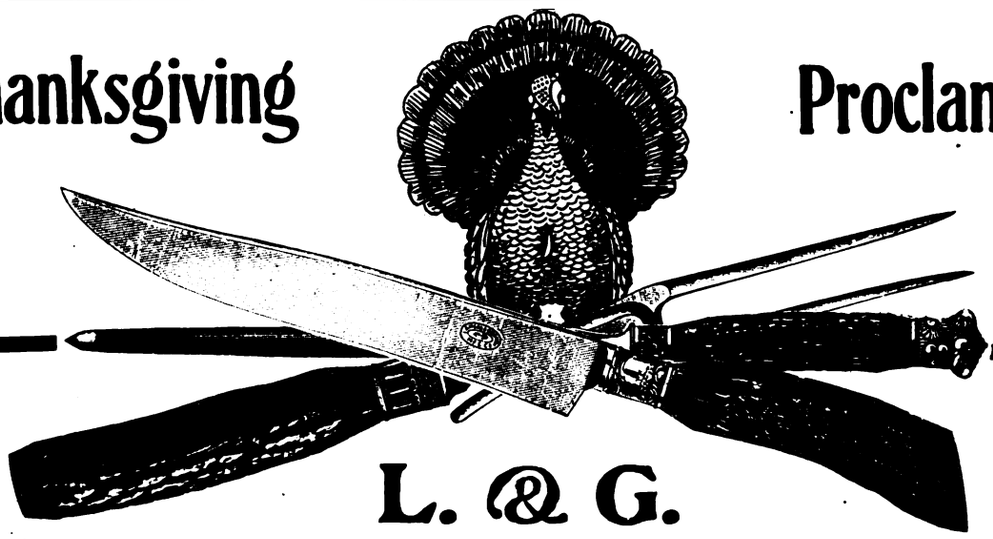
Square Dealers

Square dealers, we take it, are those who try to give their customers goods that are "square" — honest all through. For forty years we have been giving all dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public, of all the world, about their merits. Square Dealers *distribute* them — they are already *sold.* Just ahead is the big demand for

"ENTERPRISE"

Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.



Increase your sale of "Enterprise" Meat and Food Choppers by using our new booklet: "The Cook, Her Critic and—". We will send you a supply of these on request.

"SIMILAR"

A CERTAIN tool manufacturing company adorns the pages of the catalogues it gives to hardware buyers with a rubber stamp impression like this:

Similar to Starrett's No. . . . .

That Starrett Tools are the standard is a fact which we have for some time, and with strenuousness and persistency, tried to impress upon mechanics and the trade, and we have been to some expense and a good deal of labor to accomplish this purpose It is therefore gratifying to find a competitor backing up our advertising with such an unqualified endorsement. We deeply appreciate the compliment.

It is doubtless unnecessary to suggest that live hardware dealers will still prefer Starrett Tools to any whose highest claim is that they are "similar."

HARDWARE

KAMPFE BROTHERS, 34 Reade Street, New York, Manufacturers of the Original Star Safety Razor, have received the Highest Award, the Gold Medal, at the Louis and Clark Exposition, Portland, Oregon, on the Star Safety Razor.

♣

C. T. Johnson and R. F. Lund, of the Dover Mfg. Co., Canal Dover, Ohio, dropped in our sanctum on their recent visit to New York, with glowing reminiscences of the convention and an entertaining time ensued.

♣

GEO. H. STEGE, Brooklyn, N. Y., has sent us one of his new folders, setting forth the benefits to be derived from the use of the Bell Single Burner Gas Arc. He claims it is the most economical light known, and offers to install one or more of them for trial free of all expense. If you are interested write for further particulars. Address P. O. Box 139, Station W.

♣

MARBLE SAFETY AXE *Co.*, Gladstone, Mich., have recently issued their new catalogue of "Marble's Specialties for Sportsmen." They state, "It will be our constant aim in the future as well as in the past to make the name 'Marble' stand for 'extra quality' only. We will not knowingly send out an article that is not up to the highest standard for quality, and will cheerfully make good any reasonable claim for defective goods that may in rare instances escape our rigid system of inspection." Among the specialties described and illustrated are Marble's Safety Pocket Axes, Camp and Chopping Axes, Hunting Knives, Rifle Sights, Rifles and Cartridges, and these, as well as all others mentioned, are guaranteed to be perfectly satisfactory. They state that they will consider it a special favor if every person receiving a copy of this catalogue will request his sportsman friends to send for one also. They are free for the asking.

THE QUESTION BOX RECEIVES PROPER ATTENTION.

From Frank A. Bare, Secretary of the Ohio Hardware Association, we learn that "unusual interest is being taken in our coming convention. Members do not usually begin to think much about the session until January or February. A great many of our Hardware merchants are expressing a decided approval of the action of the Executive Committee in allotting more time for the question box.

"Some new members are writing the secretary that they will gladly attend the convention and present for discussion some knotty problems that have been annoying them for a long time. The outlook is very encouraging.

"Applications are already coming in for space for exhibition purposes. These exhibits will all be made in the Auditorium Building. This will be an interesting as well as instructive feature of our convention. At the Canton meeting we expect the largest number of Hardware merchants ever assembled in Ohio."

E. C. ATKINS & CO.

E. C. Atkins & Co., the well-known Indianapolis Saw Manufacturers, on November 15th opened their new Branch House at New Orleans, La. This branch occupies a large building at the corner of Canal and North Peters Streets, the numbers being, respectively, 229 to 239 Canal Street and 102 to 106 N. Peters Street. The company will carry a full stock of Circular, Band and Mill Saws of all kinds, as well as Crosscuts, Hand, Hack, Wood, Butcher and small Saws of every description, Saw Tools, Filing Room Machinery, etc. In connection with the store there will be a well equipped Repair Shop. Harvey Avery, who has represented the company in Louisiana, Texas and South Arkansas for many years, will have charge of the New Orleans branch as manager. He will have as his able right hand man H. B. White, assistant manager. Mr. White has been for many years in charge of the Order Department at the Indianapolis Office and is admirably equipped for his new position. He has been with the company for some fifteen years. B. M. Gladding, who is also widely known to the Southern Trade, and upon whom has been conferred the title of Southern General Sales Manager, will have jurisdiction over the three Southern branches of the company, namely, Memphis, Atlanta and New Orleans.

NOT ENTITLED TO INJUNCTION.

Neither upon the ground of a trade-mark, nor upon the ground of unfair competition, was the Capewell Horse Nail Co. held by Judge Lowell, in the United States Circuit Court, entitled to an injunction against the Putnam Nail Co. using small checkmarks upon the front face of the horseshoe nails it makes. The plaintiff had claimed the small checkmarks which were impressed into the nails in the manufacture, as a trade-mark to distinguish its horseshoe nails from those of other concerns. The court decides that the checks were never adopted or proclaimed by the concern as its trade-mark, and that there was no unfair competition by the Putnam Company in using the checks for its nails, as its goods are not packed or represented in such a way as to deceive purchasers in the course of trade into believing its nails were Capewell nails.

INLAND EMPIRE IMPLEMENT AND HARDWARE DEALERS' ASSOCIATION.

The Inland Empire Implement and Hardware Dealers' Association will hold its semi-annual meeting at Spokane, Washington, January 10, 11 and 12. E. W. Evenson is secretary at Spokane, Wash.

PENNSYLVANIA RETAIL HARDWARE DEALERS' ASSOCIATION.

The Annual Convention for 1906 of the Pennsylvania Retail Hardware Dealers' Association will be held at Williamsport on February 6, 7 and 8. Headquarters, Park Hotel. As the association is enjoying a healthy state of growth, it is believed the forthcoming convention will show ample evidence of the fact.

NORTH DAKOTA RETAIL HARDWARE ASSOCIATION.

The 1906 Convention of the North Dakota Retail Hardware Association will be held at Grand Forks on January 30 and 31. No regular headquarters have been assigned, as the city is a comparatively small one, most of the delegates usually selecting the largest hotel.

CONNECTICUT HARDWARE ASSOCIATION.

The directors of the Connecticut Hardware Association met at Hartford on the 31st ult. and voted to hold the next annual convention at New Haven, February 27 and 28. George J. Bassett, of New Haven, first vice-president of the association, has been appointed chairman of the Committee of Arrangements, which will doubtless provide a programme of exceptional interest. James De F. Phelps, of Windsor Locks, is secretary of the association.

AMERICAN WIRE ROPE NEWS.

Under the above name a well printed and appropriately illustrated paper comes to us from the American Steel & Wire Co., offices at The Rookery, Chicago, Ill. The contents of the November number are of that interesting kind that give evidence of the utilitarian hand of the expert who scatters his words of wisdom with a liberality unquestioned. As a Wire Rope organ it exploits the industry admirably whether for hoisting, mining, stump pulling, towing, rigging, "and in fact any use a wire [illegible] may be put to."

BELCHER BROTHERS COMPANY.

The Belcher Brothers Company has opened a New York office at 31 Spruce Street. At the factory in Irvington, N. J., are produced many kinds of Rules, Desk and Saddlers' Rules, Tailors' Squares, Wantage Rods, Board Rules, &c. The officials of the company as now constituted are: Henry F. Belcher, president; Edwin B. Stimpson, vice-president; Herbert Johanknecht, secretary, and Henry V. Rau, treasurer.

FOR CHRISTMAS PRESENTS.

Norvell-Shapleigh Hardware Company, St. Louis, Mo., have recently published a large and very attractive catalogue of their Christmas goods, including a very complete line of Cutlery, Sporting Goods, Shelf Hardware and other small goods. They state in introducing the book as follows: "In this catalogue we illustrate a line of goods that should be carried by every Hardware merchant. From this catalogue can be selected a large line of goods that can be marketed readily and at a nice profit. What would be better for a boy with a mechanical turn of mind than a Tool Set or a Scroll Saw? For exercise and amusement what is better than a Bicycle, Boys' Wagon or a Velocipede? There is nothing that will please the housewife better than a Sewing Machine, Tea Set, Set of Knives and Forks or a nice Clock. For the older boys and men what will be more appreciated than a good Shotgun, Safety Razor or Pocket Knife? Everything shown in this catalogue is useful and practical. It will pay you to examine it carefully and send us an order for such goods as are salable in your particular locality." The catalogue is profusely illustrated, is indexed and contains over 125 pages. Send at once for this exceedingly interesting and useful book.

NOVEMBER 25, 1905

Editorial Trade Review

The Hardware business in its prosecution proceeds as vigorously as ever, an activity demonstrated by the necessity for purchasing Winter goods by the retailer, the demand for which is insistent and moving with great urgency. Manufacturers are still receiving good orders, in which instances are reported of immediate deliveries being insisted upon. Builders' Hardware is still in good request, and the jobbers are doing their very best in closing the specifications in previous orders, many of which are as yet incomplete.

The weather as yet has not been severe in many parts of the country, although the imminent approach of the holiday season has created an unusual activity belonging especially to that time of the year. Holiday goods are being purchased liberally, to supply the wants of a populace that have experienced the most favorable conditions and are known to have the wherewithal to purchase handsomer supplies than usual, all classes sharing in the prosperity. The contemplated additions to stock for this purpose are largely made up of finer goods than have previously been deemed advisable, and represent a broadening sense of what will be required in this branch of the business, there being no limit to the possible variety needed for advanced ideas.

The most attractive goods are purchased, for the holiday season especially, while a dealer's success with certain lines makes it frequently necessary to carry the same throughout the year. A larger line of Plated Ware than is customarily carried in stock, fine grades of Cutlery, especially Carver and Steel Sets, are added to previous assortments, and Thanksgiving Day is becoming more and more important, as the necessity for catering to a finer taste includes that day as one for which it is wisdom to make a proper provision.

For the Christmas trade generally, particularly fine goods are annually demanded by the consumer. The larger retail houses find it is good policy to carry in some cases Solid Silver even, in limited patterns, and Cut Glass in a few designs and salable shapes, as the presence of a few of these things greatly enhances the assortment. Lamps of a holiday elaborateness, and even a few styles of clocks, not too large and of moderate design, are not considered out of place in a retail stock at the present time.

The regular goods are looked after just as carefully as ever throughout the season when special goods increase the usual demand. On some of the lines that are largely bought merchants advise the early purchase while conditions are favorable for prompt shipment before navigation closes. Even goods that may be wanted for early Spring come under this head.

Profiting by the lessons taught in other seasons, early orders are being placed for Spring delivery of Wire Cloth and Poultry Netting as representing a class of goods for which the market becomes congested with Spring orders for early delivery.

Take it all in all, the outlook for future business couldn't be better; and a heavy trade for the season may be prepared for, to carry through the winter months.

KEEP UP TO DATE IN EVERYTHING.

It's a good thing to have courage; but courage does not consist in hanging on to expensive details after common sense advises one to let go.

We often hear about the unoccupied space in Hardware stores where lack of arrangement of shelving occasioned the sacrifice of both capacity and neatness; but what about the shelf upon shelf of out-of-date goods from which the dealer does not become separated because he cannot bring himself to the point of making a sacrifice in the price? True, they may have cost him all he is asking for them, but if they are becoming more and more out of date an immediate sale at half the original price is preferable to continued storage.

Space in a well-equipped store is valuable and that dealer is losing money who is not making it a thing of value to him. Not only should it represent a direct value in itself, but the aim of every retailer should be to render every possible foot of space of indirect value by making it contribute a little toward making the entire store an up-to-date affair.

Nails and such staple goods must be carried over, but much of both the shelf and heavy Hardware now on the market is so liable to give way to new plans and contrivances that to carry it over from one season to another is expensive, risky and, in many cases, very unprofitable.

UTILIZING SPACE PROFITABLY.

A certain drummer called upon a Hardware dealer recently with a line of goods that took the merchant's eye as a specially good local seller. One difficulty confronted him; the goods were bulky and he had not room for them.

A glance over the crowded shelves and piled up counters made this excuse seem legitimate, but the practiced eye of the drummer had seen something. He looked at his watch, and, finding himself with a few hours to spare before train time, said:

"If I convince you that you have plenty of room will you give me an order?"

"I certainly will," was the reply, and the drummer went to work.

A stack of blankets was neatly folded and piled up. Shelf boxes that had been jammed in any way were straightened, and in many instances the contents of two half-empty boxes of the same goods were emptied into one. Plows and heavy Hardware were rearranged, not always with a view to occupying the least space so much as to avoid future handling and dragging about to show them up. In less than an hour the merchant gave the order and then went on with the task in which the drummer had given him so practical an object lesson.

INTEGRITY.

It is not so much what is said as who says it; and not so much what is made as who makes it. In these days of machine made products by which exteriors are practically alike, we are apt to lose sight of the invisible. Who, in looking at a magnificent skyscraper thinks of the merit of its foundation? And yet, for about six or seven stories under the ground, lies the sustaining integrity and heavily burdened element of the fifteen or twenty stories above. Who buys good clothes on the mere hasty glance at the fair exterior? We trust to the tailor who makes them; yet all clothes at first look alike to most people.

BE READY TO GIVE OR TAKE.

The success or failure of many a business man has been determined by the way he said "Ouch!" when the hammer of adversity hit his commercial thumb. No more serious failure can be encountered than that of a man's confidence in his own situation. When he really considers himself down and out he is apt to either give up in sheer discouragement or takes a desperate chance in some speculative venture that lands him into disgrace as well as disaster.

The fellow who meets his troubles whistling is pretty certain to meet with something to encourage him by and by, even if he does not succeed in getting prosperity by the tail at once. Not long since a Hardware dealer who had ground out a pretty stiff grist of financial set-backs told the writer that had he at the outset had any idea how much adversity a man can stand up under he might have been riding along on Easy Street during most of the years he had been picking his way step by step over the by-paths of half-heartedness.

THINGS TO BE THOUGHT OF.

As no one else comes quite so closely in contact with the customer as the clerk or salesman his personality should be a matter of considerable concern to the careful employer. Much has been said about dress, a good voice and the various characteristics that appeal to the eye or ear of the customer, but a good deal might be said, which hasn't been, regarding the appeal to another sense—smell.

One clerk reeks with the vilest and rankest "navy plug." The next exhales such liberal cigarette fumes that the most devoted lover of the weed revolts at this enforced second-hand enjoyment But perhaps the third makes the offenses of the other two a welcome relief from odors peculiar to his own person with which he renders the air heavy.

And the difficulty of it all is that the offender is usually so saturated with the fumes he does not notice them. It is comparatively easy to reprimand wilful offense or correct thoughtlessness, but a case of this kind should only be undertaken by that member of the firm who has the greatest amount of tact. Still, in justice to the firm, the public, and, more than all, to the innocent offender himself, correction should be made.

JOHN H. GRAHAM & COMPANY'S NEW CATALOGUE.

John H. Graham & Co., 113 Chambers Street and 95 Reade Street, New York, are distributing to their customers both Foreign and Domestic, the handsomest catalogue they have issued in their history. It forms a volume of nearly 500 pages, printed on excellent paper, with cloth binding lettered in gold. It is of the loose leaf variety, regarding which they say: "We have adopted the Loose Leaf System of binding, for the reason that the real value of a catalogue depends upon its correctness. When bound in the ordinary manner a catalogue is out of date in a very few months, because of the adoption of new list prices, the adding of new and dropping of old lines of goods. New leaves for this book will be mailed as occasion demands and can be inserted with very little trouble. Keep the book up to date by inserting new sheets immediately they are received." They are the direct representatives exclusively of the following leading manufacturers, all of whose products are exploited in this volume; it becomes a valuable catalogue in the hands of the Hardware buyer. Manufacturers represented are: Bevin Bros. Manufacturing Co., D. W. Bosley Co., A. W. Brinkerhoff & Sons, Bronson-Walton Co., R. H. Brown & Co., Coates Clipper Mfg. Co., Coes Wrench Co., Cooper Hose Mender Co., Geo. M. Eddy & Co., E-Z Mfg. Co., George E. Gay, Gibbs Mfg. Co., C. T. Ham Mfg. Co., Iron City Tool Works, Irvington Mfg. Co., Hobert B. Ives & Co., E. Jenckes Mfg. Co., Keystone Seal and Press Co., Lowentraut Mfg. Co., McKinney Mfg. Co., Many Use Oil Co., Mason & Parker, Mt. Pleasant Tool Co., New Departure Mfg. Co., Noera Mfg. Co., North Bros. Mfg. Co., Phoenix Caster Co., T C. Richards Hardware Co., Rollman Mfg. Co., Schofield Mfg. Co., S. R. Slaymaker, Smith, Seymour & Son, Snell Mfg. Co., Storm Mfg. Co., Taintor Mfg. Co., Tucker & Dorsey Mfg. Co., Wallingford Mfg. Co., L. S. Watson Mfg. Co., Whittier Cotton Mills.

EXPERT KNOWLEDGE.

The proof of a pudding is in the tasting, and in so doing the merit of the cook is demonstrated. The pudding would look the same outside even if it was sodden within. We dwell upon these illustrations merely to lead up to the point that, in buying an article upon which much depends, let the known ability of the maker figure some. Consider what great facilities for manufacture mean. They mean the gathering together of experts—bright minds picked from the rest of mankind and trained to the various branches of service, all the way from digging the ore from the earth to refining it, judging, testing and bringing it down to its final usage. And we merely bring up the point to pin on it an American wire rope as the height of attainment in integrity and skill.

A SCREEN SELLING COMPANY ORGANIZED.

The Continental Company, with general offices in the Penobscot Building, Detroit, Mich., has been incorporated under the laws of the State of Michigan, and will act as direct representative of the following manufacturers of Screen Goods:

Owosso Mfg. Company, Owosso, Mich.
Wabash Screen Door Company, Minneapolis, Minn.
Wabash Screen Door Company, Memphis, Tenn.
Porter Screen Mfg. Company, Burlington, Vt.
A. J. Phillips Company, Fenton, Mich.
Philadelphia Screen Mfg. Company, Philadelphia, Pa.
Queen Anne Screen Company, Burlington, Vt.

A. M. Bentley has been chosen president of the company and W. B. Phillips manager.

As outlining the policy of the company, the following announcement made by it will be of interest:

It is believed that the handling of the product of the several factories, whose names appear on the title page, and the consequent co-operation of the various interests will result in improved conditions for all the trade.

The policy is to be broad and liberal and the aim is to make the organization permanent.

The purpose is to make prices which, while enabling these modern factories to make moderate earnings, will yet be so low as to discourage demoralizing competition.

It was expected that prices would be ready by November 1, but a complete and careful revision of factory costs as well as important changes in the method of quoting prices and delay in the publication of catalogues will necessitate a delay of a few days, possibly until on or about November 10. Quotations will then be sent to the former customers of each factory, and a representative of this agency will call as soon as possible in all territory where factories have heretofore been represented.

It is desirable to retain for each factory its former customres, and while this agency has no purpose of attempting to dictate in such matters and will most cheerfully accept specifications for any of the factories, it is hoped that patrons will co-operate with the Continental Company in the equitable distribution of business among the factories. This will be of mutual benefit, as an oversold factory cannot well give the best service.

It is, however, apparent that this agency can aid in giving better service to the trade, since if a factory becomes oversold another of the factories can, no doubt, at once relieve the situation with goods which will become standardized as the agency becomes older. Economies in freight can also sometimes be effected through the widely distributed locations of our factories.

One of the strongest reasons for organizing this agency was the oft-repeated request of jobbers all over the United States.

While this agency cannot guarantee profits to its jobbing friends, and is at present unable to adopt "restricted prices" to the retail trade, it will use its best efforts to prevent price cutting, and expects to be in a position to aid in the maintenance of prices and will co-operate with the jobbing trade to that end. It will also co-operate with jobbers who are not patrons of this agency in all matters for the general betterment of the trade.

THE CONTINENTAL COMPANY.

For two or three years the screen manufacturers have been urged by the jobbers to effect some kind of an organization or to co-operate in some manner to improve the general condition. There has been a capacity for over-production of screen doors and window screens of nearly forty per cent. for the past year or so, and this has resulted in such indiscriminate cutting of prices that even the strongest and best manufacturers have actually operated their plants at a loss.

The manufacture of window screens and screen doors is a business in which it is impossible to obtain anything like a monopoly, for the reason that it is an easy business to get into. It is, therefore, the desire of the factories to make their prices as low as possible so as

TO DISCOURAGE NEW COMPETITION.

On the other hand, there would be little object in co-operation unless there could be some improvement in the earnings of the different factories. In one regard the factories are badly handicapped, and that is the advance in the cost of lumber. During the past year the lumber for a dozen screen doors is said to have advanced from over $1 per dozen for the common screen doors to considerable more than that amount for the fancy patterns—that is, there has been an advance of more than $10 per thousand in screen door lumber, and suitable lumber is so scarce as to be almost unobtainable at the present time.

CHANGE IN METHOD OF PRICING.

The Continental Company will introduce a system of making a net price for each size of screen doors. The base door will be the 2 foot 6 inch by 6 foot 6 inch size. In the past screen doors of all regular stock sizes have been sold at the same price, notwithstanding that there is understood to be a difference in the bare cost of materials and labor of 91 cents per dozen between the 2 foot 6 inch by 6 foot 6 inch and the 3 by 7 foot sizes of common screen doors.

Digitized by Google

The use of lists and discounts on window screens and window screen frames will also be abandoned and net prices made on each size of each pattern.

The Continental Company will make quotations and prices and will make arrangements with jobbers for the sale of the product of the various factories and will also handle the accounts. It is provided, however, that the customers may send their specifications direct to the several factories in order to secure prompt service.

SARGENT & COMPANY.

Sargent & Co., 147-149-151 Leonard Street, New York, N. Y., having participated to the fullest extent in the highly prosperous conditions for which the year 1905 has been especially noted, have found themselves so greatly cramped for room for their City Department, that they have found it necessary to add the building adjoining, the dimensions of which are 25x100 feet, extending to Centre Street, to their other possessions, expressly for that Department. This they are gradually putting in shape for their purpose, and when it is finished they will be provided with the finest facilities for attending to the wants of their City Customers, within the limits of the city. It will be greatly to the advantage of their other premises which will now be benefited by the additional room.

To give an idea of the kind of prosperity which has been their portion, we present below a list of the orders they have received devoted to the completion of the Hotels, Office Buildings, Theatres, Post Offices and other prominent structures throughout the country.

ORDERS FOR HARDWARE

For the Following Buildings, Received in the Past Few Months by SARGENT & COMPANY.

HOTELS.

FAIRMONT HOTEL—San Francisco, Cal. (considered the finest in the world) (Reid Bros., architects).
COLONIAL HOTEL ANNEX—Pittsburgh, Pa. (McCollum & Dowler, architects).
BONAVISTA HOTEL—New York, N. Y. (P. B. Pugh, owner).
HOTEL TRASADA—New York, N. Y. (C. W. Romeyn, architect).

OFFICE BUILDINGS.

RECTOR BUILDING—Chicago, Ill.
DEERING BUILDING—Minneapolis, Minn. (Long & Long, architects).
MAJESTIC THEATRE & OFFICE BUILDING—Chicago, Ill.
BESSEMER BUILDING, No. 2—Pittsburgh, Pa. (Grosvenor Atterbury, architect).
LAW BUILDING—Baltimore, Md.
GUNTHER BUILDING—Baltimore, Md. (Simmonson & Pietsch, architects).
GAITHER BUILDING—Baltimore, Md.
MUNSEY BUILDING—Washington, D. C. (McKim, Mead & White, architects).
LOWMAN BUILDING—Seattle, Wash.
MUTUAL ASSURANCE SOCIETY BUILDING—Richmond, Va. (Clinton & Russell, architects).
BOSTON STORE—Chicago, Ill.

POST OFFICES AT

Gloversville, N. Y. (J. Knox Taylor, architect).
Perth Amboy, N. J. (J. Knox Taylor, architect).
Traverse City, Mich. (J. Knox Taylor, architect).
Grand Forks, N. D. (J. Knox Taylor, architect).
Richmond, Ind. (J. Knox Taylor, architect).

EDUCATIONAL BUILDINGS.

TOME INSTITUTE—Port Deposit, Md.
SCHOOL OF MINES, COLUMBIA COLLEGE—New York, N. Y. (A. W. Brunner, architect).
PHYSICAL EDUCATIONAL BUILDING—New York, N. Y. (Parish & Schroeder, architects).

MISCELLANEOUS BUILDINGS.

TERMINAL STATION—Toledo, Ohio.
D., L. & W. R. R. TERMINAL—Hoboken, N. J. (K. M. Murchison, architect).
D., L. & W. R. R. TERMINAL—New York, N. Y. (K. M. Murchison, architect).
CITY HALL—Youngstown, Ohio.
CITY HALL—Newark, N. J. (Mowbray & Uffinger, architects).
ST. LEO'S HOSPITAL—Greensboro, N. C.
PLAZA APARTMENT HOUSE—Minneapolis, Minn. (The Keith Co., architects).
BARRACKS & OFFICERS' QUARTERS—Fort Sam Houston, San Antonio, Tex.
HARVARD CLUB—New York, N. Y. (McKim, Mead & White, architects).
CHRIST CHURCH—New York, N. Y. (Parish & Schroeder, architects).
ST. PAUL CATHEDRAL—Pittsburgh, Pa.

MISCELLANEOUS BUILDINGS.

THE PENNSYLVANIA STATE CAPITOL—Harrisburg, Pa.
THE JEFFERSON HOSPITAL—Philadelphia, Pa.

HOTELS.

THE HOTEL MAJESTIC—Philadelphia, Pa.
THE BLAIR COUNTY RETREAT—Hollidaysburg, Pa.

OFFICE BUILDINGS.

THE FIDELITY TRUST CO.—Philadelphia.

EDUCATIONAL BUILDINGS.

VANDERBILT SCIENTIFIC DORMITORY—Yale University, New Haven, Conn. (C. C. Haight, architect).

THE AESTHETIC IN HARDWARE ADVERTISING.

To the looker-on one of the most conspicuous advances in the advertising field is the artistic element. The result is that the advertising pages of some of our great magazines are really works of art.

While this is true in a certain measure in all advertising, it seems less to have pervaded the Hardware world than its subjects deserve. Well, maybe art and anvils are incompatible. Yet, why cannot the man who has a first-class hammer to sell put it and its proverbial companion, "the looking-glass," in the hands of a bright-faced though spoiled kid, and let the camera do the rest? Children play no small part in the successful advertising of the present.

Picking up a trade publication, the eyes fell upon a full-page ad. for a cow tie. Aside from the illustration of the tie, which required but a small part of the page, there was very little use made of the space. What a fine half page might have been given to a pleasing landscape with some prize winner in the foreground secured by one of these ties. Turning a few pages, this very idea was to a certain extent materialized, though evidently designed solely for utility, not art. No restful trees or quiet stream appear in the rear—only bare barn walls. The expression on the face of the bovine is not indicative of the contentment which a first-class tie should inspire. The man on the hunt of the article would probably be attracted; but the possible convert might easily pass it by.

Household specialties, as carpet sweepers and floor cleaners, are as promising subjects as baking powder or cereal. Yet we all know the attractive figures which appear in the latter. Let grace in motion combine with beauty in feature, and the woman pushing the carpet sweeper has a chance for her share of attention.

Just think what the dealer in angling goods might present in the way of beautiful scenery. Those who cater to the hunter's wants can add natural history specimens to his attractions, deer or grouse being represented under cover of the Blank & Co. rifle.

For the ice cream freezer man there is the pastoral scene with the dairy herd—snowbound, preferably; ice skates are suggestive of the ice-covered stream bordered by evergreens and thronged with merry figures; the Christmas turkey as manipulated by a brand-new carving knife of superior make would certainly attract notice; the small boy getting his hair cut might do for the clipper ad.; beauty in architecture and interior decoration should be remembered by the paint and varnish man; the prospective captive of the new mouse trap may be as fascinating in advertising columns as in the feature article of a Seton Thompson, even the patent clothes line may be placed in beautiful surroundings, and the toughest article in the Hardware stock become a pleasing subject for illustration.

DEATH OF ABRAHAM BUSSING.

Abraham Bussing, president of the Ausable Horse Nail Company, died at his home, 24 East Sixty-first Street, New York, Saturday, November 4. Mr. Bussing injured his foot last June from which blood poisoning developed, which after a long illness finally caused his death. Mr. Bussing was born in Dey Street, New York, in 1828, and was educated at New York University, and ever since has been engaged in business in this city. He married Emma Frost, daughter of the late Samuel Frost, in 1859. Mr. Bussing was at one time a director of the National Shoe & Leather Bank, New York, and was one of the founders of the First National Bank of Montclair, N. J., where he resided for about twenty years. He was always active in church and charitable work. Mr. Bussing is survived by a widow and one daughter, Alice, wife of Howard T. Kingsbury.

A SUBTERFUGE.

"Bliggins says that some one has tried to make him pay money to keep things out of print." .....

"Nonsense," rejoined Miss Cayenne. "Mr. Bliggins is trying to convey the impression that he is in the smart set."—*Washington Star.*

SEWING MACHINES AND HARDWARE DEALERS, No. 5

If I could meet you face to face and could have the benefit of your interruptions and inquiries on points that may not be clear, you would obtain, of course, a better explanation of the sewing machine business than can possibly be had in any other way; but since we can't have this meeting—just at present, anyway—I have been trying to talk to you on paper as nearly as possible in the same way that I would if we were sitting together here on the seventh floor.

And, first of all, I want to say just another word about the demand for sewing machines. The sewing machine is just as necessary as the plow and as universal in its sphere as the clock. The world could get along without Pianos, but could not maintain its high plane of civilization without the sewing machine. While it may perhaps be true that people do not feel the need of a sewing machine like they do that of food and clothing, at the same time, the need exists, only it has got to be aroused.

A sewing machine sale is an exchange of values. The value of money is well known to all. In order to effect a sale, you must offer something not only the equal in the judgment of your customer for the price asked, but also something which he *needs* and *wants* to use. Take, for example, the lawn mower. It will not be sold if the customer does not consider that it is worth the price or if he agrees that it is worth the price or objects that he has a lawn mower or that he has no lawn on which to use it.

Now, you have two things to do. First, to show that the machine you offer is worth the price asked, and, second, to show the individual in front of you how she can personally make use of the machine. In what do the values you offer consist?

If you are selling a drophead style of sewing machine you are not merely offering a sewing machine, but you are also giving your customer a handsome and attractive piece of furniture and which can readily be used for a convenient center table.

The most eloquent description which merely paints a picture of a sewing machine might only convince the individual in hand that it would be worth the price to other people. "It's a nice machine, but I guess not to-day," means, being translated, "I do not see why I need it." You are nearer to an order with such a person in showing up your sewing machine than you are with the next person with whom you must go over the same ground. You are now half-way to a sewing machine sale, but your customer objects.

An objection is an opportunity. This is a text upon which you can preach the very sermon your customer wants to hear. "I have no time to sew" means "If I had more time, I would buy your sewing machine and gladly use it." "My wife does not sew" means "I would like to buy her a good sewing machine." In such cases, any picture you can paint showing why and how the sewing machine you offer should be purchased and operated will be welcomed. Most people wish to be persuaded. They don't let you see it because they have been schooled from childhood that they ought to save their money. Therefore, in selling sewing machines you must expect objections, and train yourself to make each one the basis of a winning as well as selling argument. Pleasant or happy answers are what are wanted. Never be dismayed. There is always a good and happy reply to any objections if you would only use your mother wit to find it.

The most common objection brought forth to-day against buying a sewing machine is that the party cannot afford it. In this connection, the following answer has been used to good and excellent advantage.

"I believe I know how you feel at present about that, Mrs. Jones—we all have to economize more or less, but at the same time, I cannot help but feel that if you really wanted a thing very badly and a little money was all that stood in the way, you would manage to raise the money. Now, the only way I can possibly hope to secure your consent is to make you want the sewing machine so badly that after I have explained its principal features, you will really feel that you cannot afford to be without one. I know that you will at least give me a few moments in which to tell you more about the sewing machine and whatever your decision then may be, I promise to abide by it cheerfully. You remember the old Bible saying, Mrs. Jones, 'Hear all things and hold fast to that which is good.'"

There are many different ways of retailing a sewing machine, any one of which, if followed up industriously, will make sales, provided you select the one suited to the conditions with which you are surrounded and the idiosyncrasies of your customers. Do your best to get into their good graces. Learn to adapt yourselves to circumstances and the sale is half made. Use all your persuasive powers to make the customer desire the machine. Impress her with its best features—the nice work she can do on it—its good qualities—the durability of the machine—the convenience and completeness of the attachments.

I believe there is a large and growing field for the sale of sewing machines right in the heart of the territory of you who read this. Broadly speaking, good territory is in any locality where industrious people are found, the majority of whom are not yet supplied with sewing machines. It is a well-known axiom among those who are familiar with the work of soliciting that "It is the man who makes the territory" rather than "The territory makes the man."

Territory is really a question of physical geography. Population follows the water courses, pouring off the hills and settling in the rich river valleys. These are usually the best territories.

Every hour that the Hardware dealer devotes to the sale of sewing machines is time well spent and will eventually bring good results. There are various other special lines that have their seasons, but the sewing machine is always seasonable. The manufacture and sale of sewing machines each year enters into the millions and if you take up a line of good family sewing machines distributed by your jobber, the number of sewing machines that you can sell annually is limited only by your ability in handling the proposition and your persistence in pushing it.

The trial business may be used in extreme cases, but I would do as little of it as possible. From my experience, the longer a sewing machine is left on trial the less chance there is of selling it. Either the machine will get out of order and discourage the customer or some competitor will come along and while the interest aroused in his machine by a good showing up is still warm, close the sale. When you have shown up your sewing machine thoroughly and to the best of your ability and your customer has become interested in it, then is the time to close the sale if possible, either by all cash or a partial payment, with the privilege that if the machine is not satisfactory after a sufficient trial that it can be returned and another machine supplied or money refunded. In this way, many sales may be effected immediately that might otherwise hang fire and never materialize.

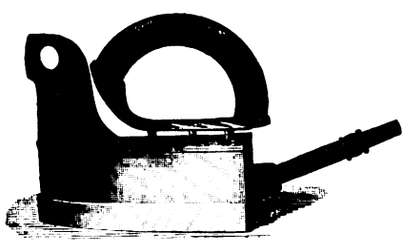
St. Louis, Mo.

WIRE--ITS DIFFERENT SHAPES.

There is a popular impression that wire is simply a small, round shape like wire in a broom, a piano, a barbed wire fence, or in the ever ready bale tie or baling wire, that is always lying around and can be used for anything—in fact, it is so common one gets it tangled up in his wheel or puts his foot in a snarl of it when on a walk. But wire is not confined to this popular shape, says the *American Wire Rope News*. It has many shapes and forms. It is flat, square, oblong, oval, star-shaped—in fact, any shape that may be desired. These are the days of automatic machines into which is fed a shape of soft steel at one end, while out of the other comes a finished bicycle hub, a knife blade, nail-clipper, pencil holder and a thousand other shapes.

To operate these automatic machines for the best results, the shape that is fed into them should be the nearest possible to the final form wanted. It is up to the wire maker to do this and an idea of the result is shown in an illustration which shows a section of pinion wire. This is drawn into star shape just about the same way as drawing wire plain round. This star shaped wire is then sawn into slices, thus making cog wheels.

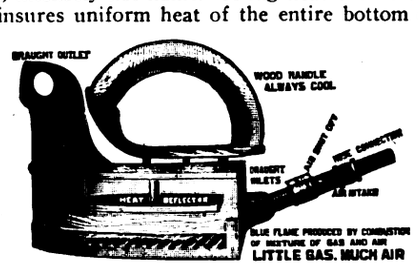
Great progress in this form of manufacture has been made in the past few years, so that it is now possible to put on the market many articles at an easy-selling cost that were previously too costly to sell. Where a great deal of shaping has to be done on the lathe, in order to put the "raw" material in form for final cutting in an automatic machine, the cost of production is considerable. Wire-drawing is the cheapest method of reducing to the net shape.



The shapes that are covered by the term "wire" are, therefore, many and varied, from a flat knife blade, a piece of shafting or a moulding wire to a small, round wire that calipers as fine as a hair. Tensile strength, of course, does not figure materially in this odd-shaped wire, as it is only needed to be of soft steel to readily cut into shape in the automatic machines. Wire that has the greatest tensile strength is piano wire, which is made to

Digitized by Google

sustain tremendous loads with the least stretch; but such a wire would be impracticable for cutting and shaping machines on account of its great hardness. Rope wire has to be made of great tensile strength, but soft enough to be flexible, thus standing the great amount of bending, and at the same time hard enough not to yield readily to abrasion. Telegraph and telephone wire must be of a quality to carry electricity the quickest, and at the same time strong enough to bare itself from pole to pole against wind pressure and ice. And so on through the vast list of different kinds of wire, most every one of which has to be made for the specific use it is to be put to.



THE I. M. E. GAS IRON.

Central Mfg. Co., Binghamton, N. Y., is manufacturing the I. M. E. Gas Iron, which ought to meet with a large sale. It is made of iron, nickel-plated polished around the base, and equipped with a wood handle, which is always cool, with a gas pipe connection with air regulator. The general appearance of the iron is shown in the accompanying illustrations. The lower

THE I. M. E. GAS IRON.

cut shows the corrugated base with the frame over the bottom of the iron. Hanging over this corrugated base is an asbestos deflector. When attached to the gas jet by means of a flexible tube the gas rushes past the intake and draws in air. This provides a large amount of oxygen, which causes the gas to burn with a blue, intensely hot flame. A lug near the heel spreads the flame and insures uniform heat of the entire bottom of the iron.

SECTIONAL VIEW OF IRON.

The asbestos deflector turns the flame on to the corrugations and keeps the base hot and the top of the iron cool. The neck acts as a combustion chamber and chimney, insuring the complete combustion of the gas, thus preventing all smoke and smell. Among the advantages which this improved iron makes possible are: It saves carrying coal and ashes and building and caring for the fire. It saves tramping back and forth between the stove and the ironing board. It saves cleaning the iron because the I. M. E. is always clean because it never touches the stove, and consequently never becomes pitted. It saves the time of building a coal fire and waiting for the iron to heat. It saves the time of changing cool irons for hot ones, &c., &c. The dimensions are: Length, 6½ inches; width at the back, 4 inches; weight, 6 pounds.

THE TEN-YEAR CLAUSE OF THE TRADE-MARK LAW.

A decision of great importance to trade-mark owners has been rendered by the Commissioner of Patents, in which he holds that the so-called ten-year clause of the new trade-mark act, which went into force April 1, does not authorize the registration in the Patent Office of trade-marks, even though exclusively used by their alleged owners for ten years preceding the enactment of the new law, unless the mark is of such a character that it could be protected in the absence of registration by action brought in a court of equity under the common law.

It was naturally assumed that under the ten-year clause any trade-mark exclusively employed by a manufacturer or dealer for ten years prior to April 1, 1905, could be registered under the new law, and many applications have since been made upon that understanding. In nearly all instances the marks thus offered for protection have been registered, but in the case upon which the Commissioner has just ruled there is presented an illustration of a class of marks employed by their users for ten years or more, but which, although in undisputed use, could not have been protected at common law. Prominent in this class of marks are devices in the similitude of the national flag, the coat of arms of the United States or of a State, the official seal of any branch of the Federal or State governments, geographical and other names which cannot be appropriated to the exclusive use of an individual, &c. All such marks the Commissioner holds to be non-registrable.—*Metal Worker.*

LEGAL CORRESPONDENCE

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Law Editor "HARDWARE," No. 309 Broadway, New York City.

ALIENS—RIGHT TO HOLD REAL ESTATE.

QUESTION: Is there anything to prevent a person who is not a citizen of the United States from holding and selling real estate in the State of New York? After he dies will his real estate descend to his children who are not citizens?

REPLY: An alien in New York can buy and hold real estate. But his title is subject to be defeated at any time by the paramount right of the State. That is to say, the State may deprive him of the title to his real estate by appropriate proceedings. A purchaser from an alien, however, gets a good title. And even if a proceeding is started against an alien to forfeit his property, he can stop such a proceeding by filing a declaration of his intention to become a citizen. After such declaration has been filed he can freely own and dispose of real estate for a period of six years. The alien children of an alien owner of real estate who has not prior to his death filed a declaration of his intention to become a citizen cannot inherit his real property in the State of New York.

INFANT—LIABILITY FOR CLOTHING.

QUESTION: If a minor goes to a dealer and buys a suit of clothes and agrees to pay thirty dollars for it, is he bound to pay for it? Must he pay the agreed price if it is worth less?

REPLY: As a general rule an infant minor is not responsible for his contracts. He can disaffirm them, even though he has received benefits under them. This rule is subject to an exception in the case of articles which are necessary; and by this term is meant, food, lodging, clothing and medical attendance which are suitable to his means and station in life. Assuming that this suit of clothes was a necessity, he can be held liable to pay for it. But he is not liable if his guardian or parents have supplied him with sufficient clothing; and he is not liable to pay the contract price, but only the *actual value* of the clothing purchased.

EFFECT OF ILLNESS ON EMPLOYEE'S RIGHT TO WAGES.

QUESTION: We hired a salesman under contract for six months. After he had been with us three months he became sick and unable to continue in our employment. At the time he fell sick, one month's salary was due. Are we bound to pay this, when he has failed to stay with us six months as he agreed?

REPLY: If the salesman had left your employment without reasonable cause, he could not recover anything for his services for the period during which he worked for you. But it is well settled that when an employee under a contract for the rendition of personal services for a specified time is disabled by sickness from fully peforming the contract, he may recover the value of such services as he has actually rendered. Sickness under such circumstances is deemed by the law to be the act of God, which excuses the employee from further performance.

SELLER'S REMEDIES IF BUYER REFUSES TO TAKE GOODS.

QUESTION: We sold a bill of goods for $456 to a customer and the goods were consigned to our order at the town where his place of business is. He has now refused to take them. Can we compel him to do so?

REPLY: A vendor of personal property has three remedies against his vendee who is in default. The seller may hold the property for the buyer and sue for the purchase price; or he may sell the property as agent and recover any deficiency resulting; or he may keep the property as his own and recover the difference between the contract price and the market price at the time and place of delivery. This rule applies not only where the title has passed, but also to cases where the agreement is executory and there has been an offer to deliver the goods and a refusal of the buyer to take them.

HE DIDN'T REQUIRE ANY.

Mrs. Mutherly—That young Yalevard is far too attentive to you, my dear. Don't you give him any encouragement.

Miss Mutherly—Mamma, he doesn't need any.—*Albany Journal.*

THE INTER-MOUNTAIN WEST

Whether for stock jobbing purposes or whether because of an actual knowledge of conditions, the Wall Street crowd spoke truly when they prophesied another year of great business prosperity for the West. Good business in the West means activity in the East—a constant demand for manufactured goods of New England—for agricultural implements, for mining tools, for building materials and for Hardware of every description. There is hardly a town west of the Missouri River in which to-day there is not more building taking place than at any time in the history of the West.

Here in this inter-mountain country business has been never better than at the present time. The railroads are handling all the business possible with their present facilities. New rolling stock is being bought, and more sidings and branch lines are being built. Twenty years ago it was thought that mining would be the only industry of this country—to-day Colorado is shipping large quantities of garden products and cattle, Utah and Idaho many carloads of fruit to Eastern markets, and at good profits to the producer. The higher prices of metals have brought many old mines into the ranks of good dividend payers. The lower cost of smelting has developed many new mines. Wool and sheep and cattle are all bringing good prices.

The large amount of dry lands that have been put under irrigation have brought thousands of settlers into this country who are all in one way or another doing their part to help develop the resources and increase the general prosperity of the country. All these causes are working together, and the effect is the great activity in business, which is more marked than at any time during the past decade. And the outlook is very satisfactory for the next two years.

Located in the centre of the richest part of the great State of Idaho, Boise, the capital, and metropolis of a rich country as large as New England, with resources far greater, is now growing rapidly and is commanding a large and fast increasing business. One sees many improvements here in a year's time. The big Hardware store of Fletcher, Eastman, Teller Co. has been remodeled and enlarged; new windows and new showcases add much to the appearance of the store. In speaking of trade conditions, Mr. Teller, of the firm, said: "The big irrigation canals that are being put through in the surrounding country are, of course, opening and developing much new land and creating a good market for much in the building line.

The ranchers and fruit raisers are all making money, and Boise, being the natural centre, is, of course, feeling the benefits. We are really doing all the business we can handle. An air of general prosperity and business push about the place of the Fletcher-Eastman Tiller Co. spoke well of the business the concern is doing.

The Carlson-Lusk Hardware Co. have succeeded to the business of the Coffin-Clinton Co. and are continuing the business both at wholesale and retail. This concern carry a large stock of mining machinery, in which a good, steady trade is carried on. The development of the Thunder Mountain country in the past five years has brought Boise a big trade in mining supplies.

The only exclusively wholesale Hardware house in Boise is the Northrup Hardware Co. This concern is now traveling six men and covering parts of these States. Mr. Northrup said business was exceedingly good and the outlook had never been better.

The good business which has been experienced by all the merchants of Ogden, Utah, during the past eighteen months promises to continue for some time to come. Wheelright Bros. have added materially to their stock of Hardware and crockery now occupying the new addition to their store. Mr. Wheelright said that business was good, and a steady demand for a better class of Hardware.

Closely allied to the Hardware business is that of Browning Bros., whose sporting goods store here in Ogden is one of the largest in the Intermountain West. The stock of guns and rifles carried by Browning Bros. is not only large, but also very complete. This concern issue a large sporting goods catalogue and sell throughout the entire Western country, to the Pacific coast.

Salt Lake City, Utah, is becoming each year more of a distributing point for the great central Intermountain West. The railroad facilities here have been good, but now, with the completion of the new route to Los Angeles extending down through the Southwest, with the Western Pacific, the new Gould road to San Francisco, actually being built, and the Denver short line, the "Moffat road" fast being extended through from Denver, Salt Lake City will in a year or two be the greatest railroad centre west of the Rocky Mountains.

And all this railroad building is having a good effect on business here. Mr. F. W. Hornung, of the Strevell-Paterson Hardware Co., said that it was bringing much direct business and developing the country and opening a lot of new territory. The Strevell-Paterson Hardware Co. is the only exclusively wholesale Hardware concern in Salt Lake City and has been remarkably successful. Their trade is constantly growing and the firm have enlarged their big warehouse to better care for the increased business. The offices of the Strevell-Paterson Hardware Co. are ideal in arrangement, and give a most pleasing effect.

The Zion Co-operation Mercantile Institute of Salt Lake City and Utah do an extensive Hardware business. F. S. Tingey is general manager of this department, being ably supported by Mr. Beattie, who is well posted in Hardware and sporting goods, and always has a pleasant word and cheerful greeting for all callers.

A good retail business is carried on by the King Hardware Co., whose store is very centrally located and where a big stock of general Hardware and house furnishing goods is carried. Mr. King said business was very good, but that in some lines the profits were cut down very close. "Why, we secured a contract for the Hardware in a new building," continued Mr. King, "the other day, which amounted to about $1,000; our bid was $1.50 only below the other lowest bidder, and our profit is hardly $50 on the whole job." Mr. King said that he thought the competition was closer here on builders' Hardware than anywhere else in the United States, and certainly if this is a fair sample, it would seem to be so. On all sides new buildings are being erected and there is a good demand for all classes of goods, and seems very foolish for the Hardwaremen to be willing to handle business on such a close margin.

A RETAIL ASSOCIATION NEEDED.

What is needed in Salt Lake City is a Hardware Dealers' Association.

During the past year or two the skies about Leadville, Colo., have been brighter, and now there is a renewed mining activity there that in some ways resembles that of the old days twenty years ago, when Leadville was the greatest camp in the world. This has been brought about by the opening of some new mines and the striking of pay ore on lower levels. To be sure, the higher price of metals has something, too, to do with the general prosperity and the working of some of the old mines and cleaning up of some old dumps. At least this is the way W. M. Harvey, the proprietor of the Western Hardware Co., pointed out the conditions to your correspondent. Continuing, Mr. Harvey said: "General business conditions are improving here all the time, collections are good, and there is no reason why we should not have good business for twelve months to come." The store of the Western Hardware Co. is located at 226 North Sixth Street, and, in addition to general Hardware, a big business is done in Stoves and Ranges, and a very complete tin shop is maintained.

A bright, light and well arranged store is that of the H. H. Tomkins Hardware Co. at 431 Harrison Avenue. The large windows are used to good advantage to display tools and mining supplies, in which latter line a large business is done.

One of the old established Leadville concerns is the Leadville Hardware Co., of which J. E. Foutz is secretary and treasurer. Both a wholesale and retail business is carried on and a big stock is carried.

THE SPORTING GOODS TRADE

A remarkable thing about the Hardware trade in Leadville is that but a very limited amount of sporting goods is carried by these stores, while in almost every other Western city the Hardwaremen have practically corralled the sporting goods trade. And Leadville has probably as many sportsmen as any town of its size in the world—the result is that many of the fishermen here are sending to Denver and even away back East for their supplies.

Pueblo, Colorado, the Pittsburgh of the West, is growing rapidly, and in time will become one of the great distributing points for the central and Southern Intermountain trade. The great steel works here of the Colorado Fuel & Iron Co. now employ some 7,000 men and are being worked in all departments continually day and night; and on many of their products the Colorado Fuel & Iron Co. are sold up for months to come.

J. M. Killen, of the Hardware concern of J. M. Killen & Co., in speaking of trade conditions, said: "Business here in Pueblo

Digitized by Google

has never been better than it is this Fall, and our wholesale trade through Colorado is growing each year. The trade in Sporting Goods is constantly increasing, and in all lines we are anticipating a large increase. J. M. Killen & Co. are very good advertisers and have been using a very clever advertising novelty this Fall in the way of a small wooden whistle. These are given to all applicants and it seemed as though each boy in Pueblo had one of the Killen whistles, on which is neatly printed, 'I blow for J. M. Killen & Co., the popular Hardware store.'"

All the Pueblo concerns carry a large stock. That of the Morrell Hardware Co. is very complete; this concern operates stores in Victor and Cripple Creek, the Pueblo establishment being in charge of Mr. Sweet. A. W. Morrell, who is at the head of the business, is one of Colorado's most successful business men and looks closely after the business of the three big stores.

Another enterprising Hardware concern of Pueblo is the Holmes Hardware Co. The store is large, well arranged and goods are attractively displayed.

One of the younger, but no less pushing, merchants of Pueblo is T. S. Rainey, whose up-to-date Hardware store is located in the very centre of the city on Union Avenue. In addition to general Hardware a good line of fine tools and cutlery is carried. Mr. Rainey said that business was good and the outlook had never been better.

Any Hardwareman in any of these Intermountain towns who attends faithfully to business, carries a fair stock and earnestly strives to please his customers, is bound to succeed. The demand for all classes and kinds of Hardware is constantly increasing and there seems to be plenty of money in circulation.

HAMMERNAIL.

AN ANCIENT PAIR OF SCALES.

BY FRED A. GANNON.

The skeleton of Father Adam of the American scale family has lately been brought to light in an ancient barn upon historic Witch Hill in the old Puritan city of Salem, Mass. Its rusty bones give an idea of the once great strength and of the age of the scales, but their history is only traditional and fragmentary.

Very probably these ancient scales were used when the early traders bartered with the Indians, exchanging trinkets, guns, powder and also whiskey for furs and skins. The spot whereupon they were found was once the outskirts of the town, where the colonial road ran by the river on its way to the town of Boston. It was an ideal place for trading, and later an inn was erected upon the spot.

It is also quite possible that the fair and buxom Betty Hull climbed upon one platform of the huge old balances, or a pair just like them, when her shrewd and rich father, Capt. John Hull, the mint master and coiner of the Pine Tree shillings, balanced the scales with silver shillings, equal in weight to his daughter, and then bestowed the silver upon his son-in-law for his daughter's dowery.

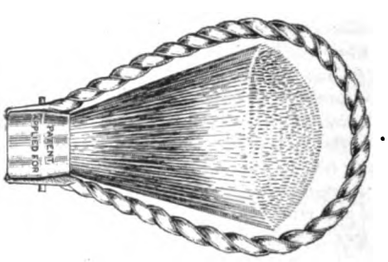
Very likely, too, Capt. John Gueer, the colonial marshal, frequently tested the weights of these scales, and placed upon them his official seal. Even in good colonial times, when all people were strictly honest we are told that it was a grievous trick of some dealers to sell goods by short measure. Hence, the colonial marshal found his task of sealing weights and measures quite important even as early as 1636, and, no doubt, his services were quite profitable, for he received one pence for every weight and two pence for every measure he stamped, their owners paying the fee, and he confiscated all that he did not stamp.

But Father Adam of the American scale family was a just and honest balance. He stood by the old tavern at the base of Witch Hill and along the Colonial Road. An upright post of oak supported him, and his strong oaken beam, nine feet long, was balanced exactly in its middle on a swivel, a fact which an iron indicator testified to by pointing to the zenith.

The weights, which are preserved today, are blocks of iron, and the full set, which now is unfortunately broken, once included 1, 2, 7 and 14 pound weights, the latter being equal to a "stone." And a remarkable coincidence among these weights was that a stone found among them weighed just 14 pounds. Very probably the stone was picked from the hillside.

From the end of either arm of the beam hung platforms of double thickness of hard pine, each platform being about three feet square. These platforms are now preserved, as are the ropes by which they were at one time suspended from the arms of the beam.

These balances must have been very accurate in their day, for despite their great age they weighed accurately lately, their owner having tried them out of curiosity. But he found that they were too clumsy to handle and that the common platform scale of today served his purpose much better.



These ancient scales were more accurate than the fabled scales of blinded justice at one period of the city's history, for close by the spot where they rest to-day 19 victims of the cruel witchcraft superstition suffered martyrdom at the hands of benighted judges and ministers.

Antiquarians place the date of these scales at a date previous to 1700, and very likely they were brought from England at a much earlier date and set up in Salem village. The scales appeared to have had much use, and they probably continued in service until modern platform scales came into use. Then they were thrown into the loft of the barn on the Nichols estate, where they remained until they were recently brought to light.

This Nichols place has given up other treasures, notably the frame work of the first church in America, which was erected in 1629 in Salem. This church has been preserved, but the ancient scales still rest in the barn loft, their days of usefulness over and their past a puzzle for the antiquarians.

KAMPFE'S FOLDING SHAVING BRUSH.

The latest improvement in shaving brushes is to be found in the new Folding Shaving Brush which has just been placed on

KAMPFE'S FOLDING SHAVING BRUSH.

the market by Kampfe Brothers, 34 Reade Street, New York, manufacturers of the celebrated Star Safety Razor. This Shaving Brush is put up in a neat, black, waterproof box. It is designed to be hung up after shaving, permitting every particle of water and soap to drain off, making it the most sanitary shaving brush on the market, and therefore the most desirable for shaving. It is intended to retail at a moderate price.

THE DANA MOP WRINGER.

Dana Mfg. Co., Cincinnati, Ohio, brings out a Mop Wringer which promises to be as great a success as the Peerless Iceland Freezer which they manufacture. The dealer or jobber handling goods made by the Dana Mfg. Co., can count on the manufacturer to help move them every time. Everybody connected with the sale of the Freezer was helped by the strong advertising it received. The same most excellent manufacturing organ-

THE DANA MOP WRINGER.

ization (except that it now is in its new factory buildings), and the same thoroughly tested selling organization, is putting on the market an article appealing to the same class of people—women in the home—and handled by the same jobbers and retailers. Here is a mop wringer that will be properly presented to the women at home. As it is easy to operate, the Dana Mop Wringer will appeal to every woman. A distinct advantage the Dana has over other mop wringers is, that with it you can stand in a natural position—both feet rest firmly on the floor all the time—at the start as well as at the finish. Then too, it is strongly put up and labelled very attractively, which is a pointer for hustling dealers.

RECENT TRADE PUBLICATIONS.

PATTERSON, GOTTFRIED & HUNTER, Limited, 146-150 Centre Street, New York, N. Y., have sent us two very attractive books recently published by them. One of these, Catalogue No. 39, deals exclusively with Blacksmiths' Tools of every description. The other, Catalogue No. 45, describes, illustrates and prices their numerous Power Transmission Appliances. Each of these catalogues contains over 250 pages, is profusely illustrated and carefully arranged throughout. The descriptive matter is very comprehensive, and it is safe to say that this Company can furnish anything in the lines referred to that they may be called upon to supply. The books will pay a careful perusal and will be gladly sent upon request.

THE NOVELTY MANUFACTURING COMPANY, Waterbury, Conn., are distributing to the trade an exceedingly attractive book, in large pamphlet form, 10x8½ inches, which is their Catalogue K. They state by way of introduction: "In presenting our catalogue of Bath Room Trimmings we have tried to describe the goods and have half-tone cuts made to show them to the best advantage." The book is a handsome production, being finely printed on excellent paper, and being profusely illustrated by the half-tone cuts above mentioned. A very complete line is shown of Bath Room Trimmings, and anyone interested in this class of goods will find the catalogue unusually interesting and helpful. A copy will be sent free of charge on application.

THE ATHA TOOL COMPANY, Newark, N. J., have presented us with a copy of their very interesting Illustrated Price List of Steel Tools manufactured by them. The book measures 10½x8 inches, and is durably bound in stiff cloth cover. It contains 150 pages and at least that many illustrations, and has been carefully indexed. Among the Tools illustrated and priced are Hammers of every conceivable style, Mauls, Picks, Pinchers, Axes, Chisels, Punches, Sledges (Blacksmiths' and others), Wedges and Wrenches. For complete information regarding these and any other Steel Tools in which you are interested write to the manufacturers, and they will be glad to quote prices.

THE YALE AND TOWNE MFG. CO., 9-15 Murray Street, New York, N. Y. have sent us a very interesting catalogue of their comparatively new product, the Electric Hoist, the distinctive features of which are its steel construction and portability. It may be shifted from place to place like a chain block and used wherever current is available. It is simple in construction and operation and is made of the best materials obtainable and with the same careful workmanship that characterizes all Yale & Towne products. The catalogue gives very complete descriptions of the Hoists and their parts and several cuts are shown illustrating same. A copy will be gladly sent to interested parties.

ERIE SPECIALTY COMPANY, Erie, Pa., have sent us a very interesting folder which shows a few of the seventy varieties of Walker Cork Screws manufactured by them. Each cork screw sent out by this company is guaranteed to be well made and made out of good material. Dealers will find them to be good holiday souvenirs and live sellers the whole year. For complete information, prices, etc., in regard to these and the many other useful and saleable articles manufactured by the Erie Specialty Company send for illustrated catalogue.

FRANKLIN SPECIALTY COMPANY, 807-809 Cherry Street, Reading, Pa., have sent us a copy of their latest Illustrated Catalogue of High Grade Nickel-Plated Hardware and Household Specialties. They claim that in constructing and finishing these goods they use only the best material, and that for workmanship, style, quality and durability they have the finest line of goods on the market. For further information send for catalogue.

SCHUCHARDT & SCHUTTE, 136 Liberty Street, New York, N. Y., have recently issued a very attractive illustrated catalogue, a copy of which has been sent us. The catalogue is finely printed and well arranged throughout, and the paper is of excellent quality. It is in large pamphlet form, 9x6 inches, and contains detailed descriptions and illustrations of the High Grade Pliers, Nippers, Pinchers, Folding Rules, Etc., manufactured by this company. For further information, prices, etc., write for catalogue.

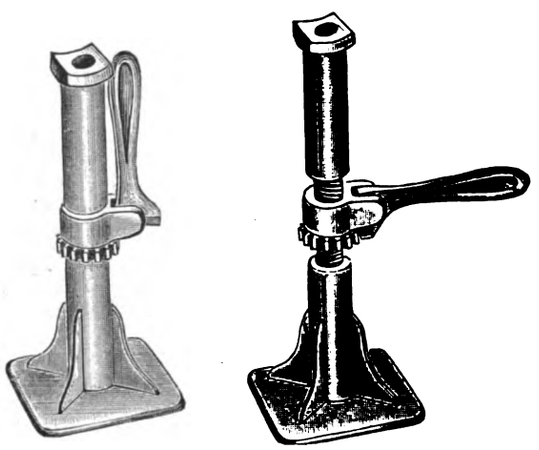
N. & G. TAYLOR COMPANY, Philadelphia, Pa., have issued a unique little pamphlet called, "11th Arrow of Ye Third Quiver", which brings into prominence the "Taylor Old Style" roofing tin which they manufacture. The booklet consists of a number of short stories setting forth the superiority of the "Taylor Old Style" over any other roofing tin made. If you are interested in this particular line write for one.

CORBIN CABINET LOCK CO., 21 Warren Street, New York, N. Y., have sent us a copy of their exceedingly attractive little booklet entitled, "Locker Locks", which illustrates and describes the various kinds of locks manufactured by them. They state that the illustrations are full size and the key locks are all so constructed as to be furnished with a large number of key changes with master key to pass. Two styles of locks are shown which are especially suitable for wire and metal locker doors and illustrations are also given of combination locks and the "Star Point" Lock which is the latest development of a permutation lock. Copy of this very interesting and useful booklet may be had upon request.

THE PIKE MANUFACTURING COMPANY, Pike, N. H., have sent us a circular which they are issuing to the trade, which gives a description of Pike's Stonoil. They claim this is a perfect oil for Guns, Sewing Machines, Oilstones, Razor Hones, Razor Strops, Clippers, Typewriters, Clocks, Locks, and all articles requiring oil as a lubricant or preservative. They state that it prevents rust, cleans guns and rifles perfectly after shooting, and preserves the original sharpness of Oilstones and Hones, that it is absolutely acidless, will not gum, and is non-drying. In short, they consider it the best oil made and the most economical.

THE BUFFALO WHOLESALE HARDWARE COMPANY, Buffalo, N. Y., jobbers of Hardware, Cutlery, Iron, Steel and Metals, have recently published their Fall and Winter Season Catalogue which measures 12x9 inches, and numbers 130 pages. It would be impossible to show a complete line of this company's goods, but such lines are given as will prepare the reader in advance for the season's trade, taking into consideration the fact that "there is no profit on lines you are out of". They state: "We believe we carry the largest and best selected stock in New York State. Our shipping facilities are unsurpassed, ten trunk lines entering Buffalo." Besides a view of the company's building the book contains a group picture of the traveling salesmen, with full information regarding items, claims, mail orders, back orders and returned goods. The catalogue is very comprehensive and is profusely illustrated, and anything you may desire in the lines above mentioned can without doubt be obtained from this company. The book may be had upon request.

THE DEMING COMPANY, Salem, Ohio, have made us the recipients of an exceedingly attractive book of over 100 pages, which is their Catalogue G, and which describes in a very comprehensive manner their Pumping Machinery for operation by any power. This includes their Single and Double-Acting Triplex Pumps for Various Services, Power Deep Well Working Heads, Artesian Well Cylinders, Rotary and Centrifugal Pumps. They state in introducing the catalogue: "We have had many years' experience in the designing and construction of pumping machinery, and our purpose has been, and will continue to be, to build a high grade line only, and not at any time sacrifice the quality of our product." The catalogue is extensively illustrated and has been very carefully prepared throughout. It will be found very useful to those interested in this particular line, and will be promptly sent on request.



CHARLES J. GODFREY COMPANY, 4 Warren Street, New York, N. Y., Importers and Dealers in Arms and Ammunition, Camp and Canoe Outfits and Sportsmen's Supplies, have sent us a copy of their Illustrated Catalogue and Price List No. 3. This catalogue is in large pamphlet form, contains very complete descriptions of the articles mentioned, and is profusely illustrated. They guarantee all goods to be as represented, and offer to refund money if any article be found otherwise. Accompanying this catalogue is a smaller pamphlet entitled, "Souvenir of Ye Antique Arms for Decoration and Defense." In it are described numerous articles suitable for decorating Cosy Corners, Hallways, Dens, Mantels, etc., for which purpose they will be found appropriate and unique. Many of them can be used for defending the house or for sporting purposes. Either or both of these interesting pamphlets may be had upon application.

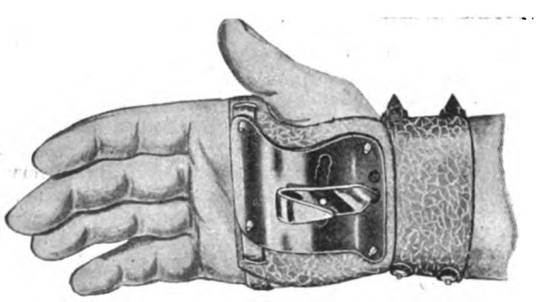
NEW GOODS AND SPECIALTIES.

COVERT'S AUTOMOBILE SCREW JACK.

The Covert Mfg. Co., Troy, N. Y., is introducing to the Hardware trade an Auto Jack of recent invention which is claimed to possess great advantages and superiority over anything hitherto designed for the purpose. The accompanying illustration, which fairly shows its many merits, cannot be fully comprehended and appreciated without seeing the Auto Jack in operation. It is a



COVERT'S AUTOMOBILE SCREW JACK.

Ratchet Double Screw Lifting Jack, easy to operate, and is strong, light, compact and quickly adjusted. It has no loose parts, and is always ready for immediate use by carrying it in the tool box. The great necessity of having such a powerful Jack ready for instant use in an emergency when on the road is fully appreciated by all Automobilists, and every owner of an Automobile should look with favor on these useful Jacks. Special attention is directed to the advertisement of the Covert Mfg. Co in this issue.

No. 59 HOOK HUSKER.

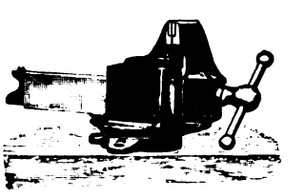
The Boss Manufacturing Co., Kewanee, Ill., is the manufacturer of the No. 59 Hook Husker, of which we give an illustration herewith. The shield and hook are made of strong leather, both soft and pliable. The hook on this husker has the advan-

NO. 59 HOOK HUSKER.

tage of adjustment to fourteen different positions, which is claimed to exceed any other on the market in this respect. The company state they have recently issued a catalogue of this class of merchandise which they claim is the first complete catalogue ever published, and they are anxious to place one in the hands of every dealer handling these goods; for while they do not sell the retail trade direct, they send catalogues on request and any orders they receive from retailers are referred to the nearest jobber handling their goods. Send for one of these catalogues and keep posted.

A NEW LINE OF REVOLVERS.

Thayer, Robertson & Cary, Norwich, Conn., are the manufacturers of a line of revolvers calculated to meet a demand for those of a moderate price that would be found perfect in every respect and that would appeal to the retailer for its excellence and reliability. We present herewith an illustration of their Automatic Shell-Ejecting, Self-Cocking, Hammerless Revolver, which they manufacture in three sizes, .38 and .32 caliber, five shot, and .22 caliber, seven shot, all with rubber stocks and suit-



AUTOMATIC SHELL EJECTING HAMMERLESS REVOLVER.

able for S. & W. cartridges. This "Hammerless" model cannot be discharged unless the trigger is pulled way back. The round firing pin reaches the exact center of the primer and the cartridge. The inner mechanism for automatically emptying the ejecting shells is claimed to be the simplest and most powerful yet devised and has a lifting force of 65 pounds. The cylinder is held in position without the use of extra parts or springs. The barrel catch is made of forged steel, which gives the arm rigidity and a safety of the so-called "solid frame" models that, however, lack the desirable shell ejecting features of our "Hinge" Revolver. The arm is highly finished, electro-plated and closely wrapped in 144 square inches of rust proof paper, and packed in a handsome leatherette case. Send to the manufacturers for circulars giving further information.

SWIVEL BOTTOM QUICK ADJUSTING COACHMAKERS' VISE.

The Emmert Mfg. Co., Waynesboro, Pa., is the manufacturer of the Presto Quick Acting Coachmakers' Vise, illustrated herewith. This vise, it is claimed, is a better mechanical arrangement for quick acting movement than any hitherto offered as the vise can be operated with one hand. It has no springs. The vise has

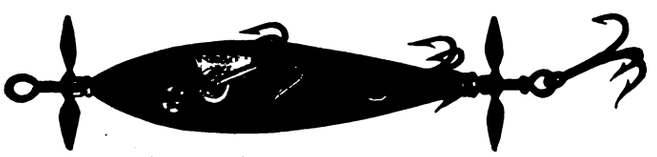
QUICK ADJUSTING COACHMAKERS' VISE.

a whole nut, and when the jaw is against the work it can be used as a common screw vise if so desired. The rear jaw of this vise is self-adjusting and in use automatically conforms to any angle, adjusts itself and holds firmly the object, whether it be straight, beveled or wedge shaped, thus making it a Parallel Solid Jaw Vise. The self-adjusting jaw resting and working as it does upon and against the solid body of the vise, is thereby rendered absolutely as strong and durable as a solid jaw.

NEW ELECTRIC STOVE.

Radical Departure from Former Cooking Devices.

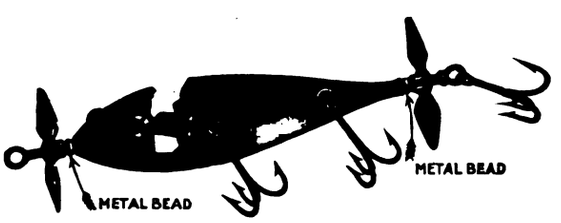
Professor Elihu Thomson, who has left his mark so indelibly on the electrical industry in this country, recently patented an electric stove, suitable for kitchen use, which is a radical departure from anything heretofore offered for this purpose. The stove is heavily jacketed externally with a layer of some good heat-insulating substance, such as asbestos, fire-clay, etc., and is provided with a lid of the same construction. Within the jacket is a mass of refractory material, imbedded in which is a granular resistance material, such as silicon. The combination of parts is such that the whole interior of the stove may be maintained



Digitized by Google

at a red heat for a very considerable time at a very small expenditure of energy, so that without involving too great cost the stove will be kept available at all times for instant service.

An enthusiastic manager of an Ohio electric light plant declares that the time is soon coming when there will be a flat-iron "peak" on the central station load through the middle of the day every Tuesday. At a charge of ten cents per kilowatt the electric flat-iron costs about two cents per hour to operate, and with ordinary care it is impossible to burn the finest fabric. Another excellent feature of the electric iron is that it is always clean.



SHAKESPEARE'S WOODEN MINNOW.

William Shakespeare, Jr., Kalamazoo, Mich., is placing upon the market a Shakespeare Wooden Minnow, of which we present illustrations. It is especially adapted for casting. It is well balanced and has an important improvement in the method of attaching the hooks. By this improvement a hole is drilled transversely through the body of the minnow, in which is fastened a brass tube having funnel-shaped ends on each side, thus

SHAKESPEARE'S WOODEN MINNOW.

keeping the hooks from scratching the body; should it be necessary to replace the treble hooks it can be done easily by allowing perfect freedom of action; the centre section of the tube is threaded, the treble hook is placed in the loop of a spring cotter the ends of which are threaded; these ends screw into the centre section of the brass tube, making a substantial metal connection and at the same time a waterproof joint. That this tube will not slip out, a hole is drilled through the middle, and a centre wire

CONSTRUCTIONAL VIEW OF MINNOW.

passing through this holds it securely. Another improvement is the metal heads, one at each end of the minnow next to the spinner; these heads are made from hard drawn brass rods, which allows the spinner to turn easily. The eyes of the minnow are of fine glass and only the best quality of treble hooks are used. The dimensions are: The body of minnow is 3¾ inches long and 6½ inches over all, while the weight is but one ounce.

THE "CANADIAN HOCKEY" SKATE.

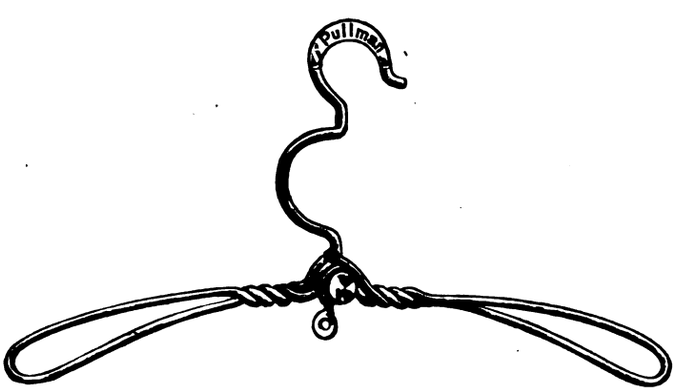
Barney & Berry, Springfield, Mass., are placing before the Hardware trade a new and improved Hockey Skate founded on the latest "Canadian" pattern, and which promises to meet with

CANADIAN HOCKEY SKATE.

an extended sale, under the name of the "Canadian Hockey." It has been improved largely by the incorporation of the quality and material used in all the Ice Skates manufactured by this well-known firm, whose new edition of their catalogue is now ready for delivery. A large demand for the Barney & Berry Skates is to be created this Winter for the retailer by a systematic campaign of advertising that will be carried on in the trade papers and magazines.

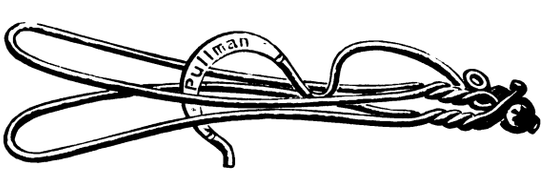
POCKET SCREW DRIVER No. 553 A.

L. S. Starrett Co., Athol, Mass., are the manufacturers of the Pocket Screw Driver No. 553 A, of which we present an illustration. This handy little tool is made from steel tubing, which is knurled and nickel plated. The butt of the blade fits a solid lock in the tube, which prevents it from turning in use, while it is held from coming out by giving a slight turn of the chuck. The Screw Driver blades are properly tempered for the work for



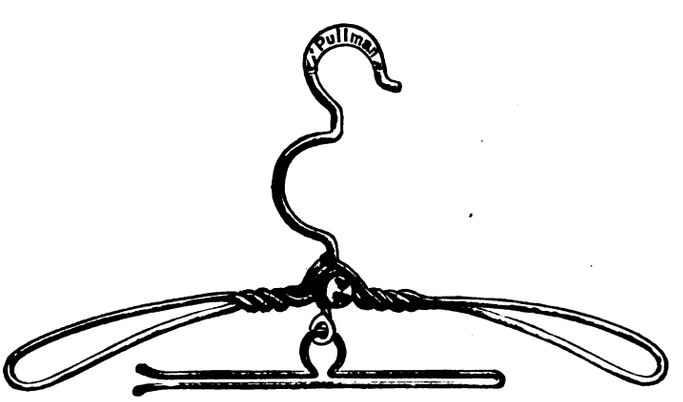
POCKET SCREW DRIVER NO. 553 A.

which it is designed. To carry it in the pocket the blade can be reversed and inserted in the handle, giving a slight turn of the chuck to keep it there. It takes no more room in the pocket than a penknife. It is made in two sizes, No. 553 A, handle ¼ inch diameter, blade 2¾ inches long, weight ½ ounce. No. 553 B, handle ⅜ inch diameter, blade 3 inches long, weight 1½ ounce.



THE PULLMAN COAT AND SKIRT HANGER.

The Pullman Mfg. Co., Rochester, N. Y., have originated the most practical Coat and Skirt Hanger, which they are offering the Hardware trade, and of which we present several illustra-



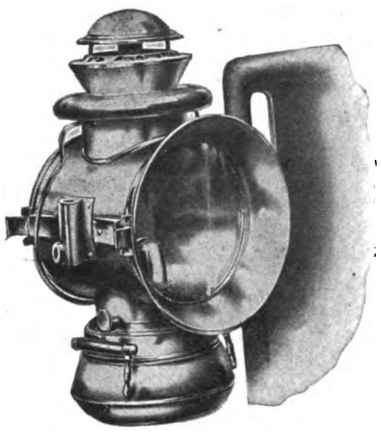
THE PULLMAN COAT AND SKIRT HANGER.

tions. It possesses the advantage of being folded conveniently so as to occupy small space in a trunk or grip, as will be seen in Fig. 2. It is manufactured from a tough grade of cold rolled

FOLDED FOR CARRYING.

steel wire, which is given a heavy plating of copper and then coated with a heavy nickel plate and handsomely finished. It possesses the advantage by the aid of the small eye shown in Fig. 1

COMPLETE WITH TROUSER HANGER.



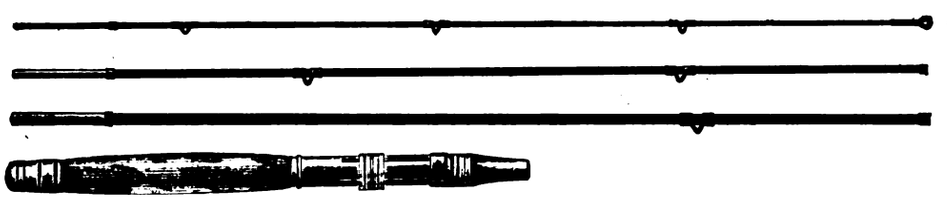
to add to its conveniences a trouser or skirt hanger, as shown in Fig. 3, making a combination in the hanger line that may safely be added to the attractions for Christmas distribution that may be retailed at popular prices.

HAM'S "DIAMOND" DRIVING LAMP.

C. T. Ham Mfg. Co., Rochester, N. Y., are introducing through the medium of the trade, Ham's "Diamond" Driving Lamp, as shown in the accompanying illustration. It is built on the same

Digitized by Google

lines as their Cold Blast Runabout Lamps, the valuable features of which are retained. The interior is highly finished with silver nickel, the back reflector is heavily silver-plated, and the lens in the doors is double convex, finely ground and polished, which greatly magnifies the light. There is a back door for cleaning the back reflector, and this, with the simple and efficient locking device on the oil pot, makes all parts quite easy of access for

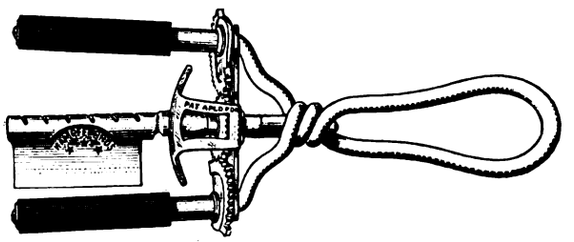


HAM'S "DIAMOND" DRIVING LAMP.

cleaning purposes. This lamp is strongly constructed, can be attached to either right or left side of dash, and is furnished in four styles; Enameled Black and Nickel Plated Steel, Polished and Nickel Plated Brass.

RAINBOW STEEL RODS, A NEW LINE.

It is announced by the Horton Mfg. Co., of Bristol, Conn., makers of the celebrated "Bristol" Steel Fishing Rod, that they are prepared to supply the trade with a new line which are known as the Rainbow Steel Rods. These Rods are made to meet the demand for a lower priced Steel Rod, and while they are manufactured with great care and of the best material, the



RAINBOW STEEL ROD.

makers do not guarantee them on account of the low price. The percentage of breaks is so small, however, and the cost of a single joint is so slight that this is a matter of little amount. All the Rainbow Rods are finished handsomely in dark green enamel and put up in brown canton flannel cases. The bait Rods are all made with cork grip handles in seven lengths from 5 feet to 10 feet, fitted with German silver solderless two-ring guides and German silver three-ring tops, handle mountings nickel with solid reel seat above the hand. The No. 225 Rainbow bait casting Rod is made in 5, 5½ and 6 foot, lengths, fitted with large German silver casting guides and large German silver mounted agate casting top. There are 2 fly Rods, 9 and 10 feet, respectively, both having cork grip handles, with nickel plated mountings and solid reel seat below the hand and German silver one-ring fly top. The 9 foot Rod has German silver drop ring guides and the 10 foot Rod has German silver solderless two-ring guides. There will no doubt be a large quantity of the Rainbow Rods sold owing to the low price, but there will always be a strong demand for the original "Bristol" Rods, which have been on the market for over fifteen years, growing steadily in popular estimation as they have many special features which are optional with the purchaser as well as an excellent reputation. We give with this article an illustration of the Rainbow bait or bass Rod, and if our readers desire further information we would suggest that they write to the Horton Mfg. Co. for prices, etc.

KAMPFE'S NEW STROPPING MACHINE.

The new stropping machine just put upon the market by Kampfe Brothers, 34 Reade Street, New York, is the handiest tool of its kind. Such careful attention has been paid to every detail in its construction that this machine is a perfect mechanism. Its parts are oxidized and it is substantially made. In stropping

KAMPFE'S NEW STROPPING MACHINE.

it gives the heel and toe movement, thus insuring a keen cutting edge to the razor.

HARDWARE PATENTS.

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C., and St. Paul Building, New York City.

PATENTS EXPIRED NOVEMBER 6, 1905.

392,259. CLOTHES DRIER. G. R. Carr, Lockport, N. Y.
392,282. LAWN MOWER. A. J. Moyer, Springfield, Ohio.
392,300. WRENCH. F. Armstrong and N. W. Vandegrit, Bridgeport, Conn.
392,315. WASH BOILER. M. Davis, Oak Valley, Kan.
392,328. TWINE HOLDER. J. C. Haile, Utica, N. Y.
392,425. CARPENTER'S PLANE. J. Hartness, Torrington, Conn., and J. H. Tower, Brooklyn, N. Y.
392,515. TACK HAMMER. L. H. Hoover, St. Louis, Mo.

PATENTS ISSUED NOVEMBER 7, 1905.

803,562. FLUE CLEANER. G. W. Dean, Fort Erie, Canada.
803,641. WRENCH PIPE JAW. E. Thompson, Gamebridge, and T. A. Brown, Toronto, Canada.
803,645. CASTER. F. B. Upton, St. Louis, Mo.
803,669. BIT BRACE. H. J. Cook, New Britain, Conn.
803,672. IRONING BOARD. L. M. Darrow, Stockton, Cal.
803,682. BALL BEARING CASTER. E. W. Fishburne, Roanoke, Va.
803,692. SOCKET WRENCH. C. K. Hill, Cleveland, Ohio.
803,783. STEP LADDER. F. Pfeifer and T. G. Steele, Chippewa Falls, Wis.
803,790. WRENCH. W. J. Ryan, Worcester, Mass.
803,942. PIPE WRENCH. J. H. Vinton, Boston, Mass.

PATENTS EXPIRED NOVEMBER 13, 1905.

392,667. SPRING HINGE. L. M. Devoe, Freeport, Ill.
392,669. WASH BOARD. W. Finlay, Schoolcraft, Mich.
392,720. SASH BALANCE. W. D. Cronin, Phila., Pa.
392,762. COVER FOR POTS. A. G. Stilson, Cobleskill, N. Y.
392,880. WASHING MACHINE. J. Plettner, Ai., Ohio.

PATENTS ISSUED NOVEMBER 14, 1905.

804,244. IRONING BOARD. Daniel Messer, Rochester, N. Y.
804,295. HAND TOOL. Edward M. Zacharias, New York, N. Y.
804,351. WRENCH. William R. Tomlinson, Hartford, Conn.
804,399. DOOR LOCK. John C. Harderbergh, Cleveland, Ohio.
804,453. WASHING MACHINE. Seth O. Collins, Roxbury, Ohio.
804,600. WRENCH. David Harris, Coulter, Pa.
804,611. WRENCH. George A. Low, Wilkensburg, Pa.
804,679. SCREW DRIVER. Edward Searle, Worcester, Mass.
804,816. ADJUSTABLE CURTAIN BRACKET. Henry P. Phelps, Auburn, Ill.

RESULT OF THE EXPERIMENT.

OUR BRITISH LETTER.

(By our Special Correspondent.)

LONDON, *Nov.* 11th, 1905.

TRADE PROSPECTS IN GREAT BRITAIN.

Enquiries in all the principal centres of Hardware trade in this country point to a revival of business and an upward tendency in the prices of British-made Hardware. Some manufacturers affirm that the long hoped for trade boom has already come, and point to the development of trade fast approaching, in consequence of the settlement of affairs in the far East. The activity of the representatives of the manufacturers of the United States manufactures in China, Japan and other Eastern countries is very apparent, and has possibly done something towards awakening up British makers,, who are now taking active measures to develop business in those countries. Scotch manufacturers and iron merchants are fully employed and are enabled to report that they have in hand many large orders for machinery and constructional iron work. Colonial development is also satisfactory, and, in addition to other signs of improvement, orders appear to be coming in very freely from Australia and some portions of South Africa. Several London shippers have recently received good indents for American machinery as well as for the products of British implements and machinery makers.

ASSOCIATION WORK.

Association work is now in full swing and R. H. Smith, the general secretary of the I. F. A., is enabled to report the formation of more than one new association as the direct result of the mission work which he has recently taken part in. An important association has been formed in North Wales, and the work mapped out for the members to undertake has been received with much favor by Cambrian ironmongers. This is the first attempt made to enter the Northern portion of the Principality. Your readers will, however, remember that the first Ironmongers' Association formed in Great Britain was the one commenced at Swansea some ten years ago. Unfortunately, the parent association is now practically dormant, and the ironmongers of that portion of South Wales are either in too prosperous a condition to care about securing the undoubted benefits of association, or they prefer to work as isolated units. Fortunately the spirit of association is spreading in other parts and there are many ironmongers who have lived quite apart from any intercourse with their brother traders who are now anxiously enquiring as to the possibility of combining outlying districts and so obtaining at least some of the advantages of association.

THE SUGGESTED NATIONAL ASSOCIATION FOR IRONMONGERS' ASSISTANTS.

Ironmongers' assistants have very generally taken up the question of forming local ironmongers' assistants' associations, and already several associations have been formed in important centres. The assistants themselves as well as those who have helped to bring them together are taking great interest in the work. The consensus of opinion appears to be that the advantages of association to young men far outweigh the possible friction which might arise from anything in the form of union, and that ironmongers have very little cause to fear evil effects from the encouragement they are giving to the present day movement. The Liverpool Ironmongers' Assistants' Association has been much in favor of the formation of a strong National Association, to which local associations, small or large, might be affiliated. The country, however, does not appear to be ripe for such an organization and it is better to go forward steadily and encourage the formation of local associations in towns where the assistants appear to desire it. In addition to the social side of the question there is the educational, and already some very intelligent men have been brought to the front even among the ironmongers' assistants, resulting in the preparation of several very good papers dealing with topical educational matters in quite a masterly style. Associations and employers may do a large amount of work by encouraging their assistants to study the practical side of their business as well as simply acting as salesmen. *The Ironmongers' Chronicle* recently announced a Workshop Competition offering substantial prizes to assistants who cared to compete for them; the main point being to encourage assistants in their study of the requirements of an ironmongers' workshop; the way in which it should be organized, the tools and plant required to carry it on, and the best and most profitable kind of work to cater for. I understand this competition has been remarkably successful and that competitors from all parts of the country have shown a marked improvement in trade knowledge. Other British trade journals have also from time to time held competitions, with the result that it is clearly shown that British ironmongers' assistants are on the up grade.

AGRICULTURAL IRONMONGERS.

Some activity has been shown by agricultural ironmongers during the past few weeks in the sale of ploughing and cultivating machinery. Several interesting ploughing matches have taken place, in which ploughmen have successfully competed for valuable and useful prizes. The trade generally is interested in these competitions, as the winning of champion prizes by ploughmen forms good matter for advertisements for the makers of the ploughs used, and also for the local agents handling them. American manufacturers of ploughing and cultivating machinery are not very well represented in this country, although there are several well-known firms who are always in evidence on such occasions. Such names as Ransomes, of Ipswich; Hornsby, of Grantham, and Yates, of Doncaster, are known all the world over. The Wilkinson Plough Co., Ltd., of Toronto, appear to be making a bid for British trade, and the Kid-Kangaroo ploughs, handled in this country by F. C. Southwell & Co., have gained a large amount of popularity among British farmers. Mr. F. C. Southwell, the head of the last-named firm, died suddenly a few days ago. He was a popular implement merchant and for many years handled the produces of the Deering Harvester Co., now incorporated in the great Harvest Trust. The Osborne-Plane Co., Ltd., who distribute the products of the American Plane and Osborne Companies, here continue to hold their own, and will, I understand, have an exceptionally well-staged exhibit at the Smithfield Show, which will be held at the Agricultural Hall, London, early next month. I hope to send you a report of that exhibition in my next letter.

THE CARPET SWEEPER AMALGAMATION FINALLY OFF.

Your readers will, doubtless, have followed with interest the scheme of amalgamation which has been in progress for some months past, whereby it was intended to form a company in Great Britain, with James Pollit at its head, for the distribution of the products of the American Bissell Carpet Sweeper Co. and the English firm of Entwistle & Kenyon, who make the "Ewbank" sweeper. The two firms have long run in competition, and in consequence of friction having arisen between the members of the ironmongers' associations and the manufacturers through alleged sales by co-operative societies and other cutting firms, at figures below the price maintained list efforts here set afoot to bring about some arrangement. The late President Bacon of the I. F. A. took an active part in attempting to settle matters, but his efforts came to nothing, owing to the announcement that an amalgamation was in course of progress, and that in a short time James Pollit would be enabled to carry through a scheme by which he would distribute the sweepers and be in a position to maintain agreed prices on all the goods he handled. Unfortunately he has now been compelled reluctantly to state that the negotiations have been finally broken off. This fact is regretted by members of Hardware associations because it was a well-known fact that James Pollit, who has often been called "The Apostle of price maintenance," dreamed of even higher developments, and had in view a scheme whereby he would be in a position to import a number of domestic specialties, manufactured in the United States, boom them for all they were worth in this country, and at the same time, secure the co-operation of ironmongers by a rigid system of price maintenance.

PIANO WIRE.

Some people do not figure on the wonderful requirements of this kind of wire. Aside from the mere tensile strength, a piano wire must be made so as to stretch evenly all the way through, and not only in the middle like a piece of gum a girl pulls out of her mouth. It must be perfectly round and of accurate gauge, else it be acoustically deficient and the work of the scale maker set at naught. It is given to but few acoustic engineers to design a piano scale that is good and his life-work cannot be sacrificed to a poor wire. And so the aristocrat of the wire business is the piano wire. In the great plant of the American Steel & Wire Co. at Worcester, Mass., a separate building is devoted to this aristocrat, to make what it took forty years of study and experiment to perfect. A piano weighs about 800 pounds, of which about 8 pounds is in the wire. There are about 150,000 pianos made in the United States annually by 245 makers.

JAP-A-LAC

REGISTERED TRADE MARK

"WEARS LIKE IRON"

Do You Want A Thousand Wives

to buy a thousand cans of JAP-A-LAC? If you do, tell them so.

There are more than a thousand women in almost every community who want to buy JAP-A-LAC. It is a very simple matter to sell them if you let them know you keep it.

We spend enormous sums of money to get customers for you, but are not in position to take each one by the hand and lead her into the store. She will come in for JAP-A-LAC if she knows you keep it; you can then sell her other articles. Perhaps she has not traded with you before. Your courteous treatment of her the first time she calls may mean a PERMANENT CUSTOMER FOR YOU.

Try this method of securing new customers and see if we are not right.

Thirty-five of the most prominent, popular Magazines are carrying JAP-A LAC advertisements every day in the year; your public sees these advertisements and wants to buy JAP-A-LAC.

Are you giving JAP-A-LAC all the attention its advertising justifies? Think it over.

THE GLIDDEN VARNISH COMPANY,

MAKERS OF HIGH-GRADE VARNISHES FOR ALL PURPOSES

641 ROCKEFELLER BUILDING,

CLEVELAND, OHIO

AMERICAN CHAIN MANUFACTURE.

In considering various industries without delving to a considerable extent into their respective conditions, the average layman or mechanic has little idea to what degree of importance the work associated with each industry bears upon the public and manufacturing world.

In describing the industry now under consideration—the manufacture of chain—few, aside from the manufacturers themselves, have any idea as to the amount of money invested and the number of persons employed in supplying the demand for chains. There are a thousand and one uses to which chains are applied, ranging from the gold chain worn about a woman's neck for holding a watch to the large heavy steel chains employed on ships.

A chain consists of a series of links, each interlocked so as to form a continuous strong and flexible metal line, capable of sustaining heavy loads. Chains should be made of metal having ductility combined with strength and elasticity in the highest possible degree. Brittleness is an irremediable defect, as all chains are at times subject to sudden stresses and their loads could not be withstood if they were not elastic and ductible, and capable of taking up a considerable amount of energy of impact. Iron intended for chain-making must not only possess strength and ductility, but must also be capable of welding readily.

The manufacture of the numerous varieties is performed by both hand work and machines. The best chain iron is of rather soft quality, and free especially from sulphur and phosphorus, with just sufficient silicon to give good welding properties.

The operations of manufacture consist in (1) cutting off the right length of bar for a link; (2) heating the body of the piece to a forging temperature, and bending it to shape with the aid of a former and pattern, leaving, however, the ends of the piece separated sufficiently to permit the later operation of welding; (3) heating the ends and forming the surfaces for welding; (4) welding the link and giving it its final shape; (5) bringing it to gauge and smoothly finishing the surfaces, at the same time, if the stud is used, introducing it and closing down the link firmly upon it. The welding process is preceded by the introduction of the adjacent link of the chain. Sometimes quantities of links are made independently and afterward connected by intermediate links so as to form the continuous chain.

The chief steps taken in machine-made chains are the winding of the links, cutting the links and welding. The link-winding machine consists of a horizontal shaft about 4 feet long, driven by a belt and pulley attached to one end, while on the other end of the shaft is attached a mandrel over which the iron or steel bar is to be wound. The mandrel varies in size according to the size of link desired, the outside dimensions of the mandrel being the inside dimensions of the link. Placed directly over the mandrel is a steel guide wheel, grooved to carry the wire, and which comes in contact with the mandrel by being tightly pressed against it by a powerful spring. The wire is fastened in the mandrel, the machine started, and the wire wound in a spiral of links, owing to the tight pressure of the guide wheel. When the spiral has reached a length of 6 feet, the winder is stopped, and the spiral cut from the rest of the coil. The spiral is next cut into links by a machine cutter, the cut being at an angle of 60 degrees with the diameter of the rod. Each cut represents one link, the ends of which are cut scarfed, ready for closing. When a sufficient number of links are cut they are then heated and wedged together by means of a power hammer. A small band hammer is employed to add the finishing touches.

The links, to be satisfactory, should have not less than 160 per cent. of the strength of the original bar. The average for good chain work has been found to average about 165 per cent. Proving stresses, as adopted by the United States Navy Department, range from 34,000 pounds on a 1-inch chain to 121,000 on a 2-inch cable. The differences of quality between the bar and link are due to the processes of heating and welding.—*American Inventor.*

CAUTION.

An architect remarked to a lady that he had been to see the great nave in the new church.

The lady replied, "Don't mention names—I know the man to whom you refer!"—*London Tit-Bits.*

REVIEW OF THE MARKETS.

WIRE NAILS: There is still an active demand noticed in the Wire Nail market, in which new business is evident, while requisitions on old contracts are forwarded with a confidence in early shipment and delivery, gives the market satisfactory conditions to work on. Quotations are as follows: f.o.b. Pittsburgh, plus actual freight to point of delivery, 60 days, or 2 per cent. discount for cash in 10 days:

Carloads to jobbers	$1.80
Carload lots to retailers	1.85

New York.—The Jobber as usual at this time of the year find their regular assortments adly broken. There is a good local trade in the city and vicinity, and the brisk demand to keep their supply in fair order causes the continuous drain on stocks as soon as the mills make a prompt shipment. Regular quotations for small lots from store are still held at $2 to $2.05.

CUT NAILS: A meeting of the Cut Nail Association will be held on the 28th inst. The market on Cut Nails has been made stronger since the last meeting and the quotations have approximated the prices which the trade regard as being satisfactory and resulted in a business of good dimensions. Quotations are as follows: $1.65, base, for carload lots, f.o.b. Pittsburgh. Iron Cut Nails for delivery at Pittsburgh, Buffalo and all points west of these cities are held at $1.75 base, in carload lots.

New York. With a fair demand for adding to stock assortments the trade in Cut Nails holds its own in the local market. Small lots from store being in regular quotations on the basis of $1.90.

BARB WIRE: A lessened demand in the way of new business which shows that the Jobbers are fairly well provided with contracts on which they can make requisitions. The market is regarded as in good condition. Quotations are as follows: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

	Painted.	Galv.
Jobbers, carload lots	$1.95	$2.25
Retailers, carload lots	2.00	2.30
Retailers, less than carload lots	2.10	2.40

SMOOTH FENCE WIRE: About the same conditions are reported in this market as in that of Barb Wire. Regular demand is decidedly light and almost entirely on existing contracts. Official prices are reported as being firmly adhered to. Quotations are as follows: f.o.b. Pittsburgh, 60 days, or 2 per cent. discount for cash in 10 days:

Jobbers, carloads	$1.65
Retailers, carloads	1.70

The foregoing prices are for base numbers, 6 to 9. The other numbers of Plain and Galvanized Wire take the usual advances.

CHAIN, COIL, TRACE, &c.: An advance of $3 a ton has been made by the associated manufacturers in the prices of Coil Chain, and also in Traces and Fancy Chains, which are quoted from 5 to 7½ per cent. higher than heretofore. The present condition of the Iron market and the heavy orders with which the manufacturers' books bear witness, make it a favorable time to demand a better price.

SASH CORD: Common White Braided Sash Cord has been advanced 1 cent per pound, making present quotations as follows: Nos. 8 to 12, 24 cents; No. 7, 24½ cents, and No. 6, 25½ per pound.

ROPE: The following prices may be said to represent the market:

	Cents per pound.
Pure Manila, 7-16 and larger	12½
B Quality Manila	11½
Pure Sisal, 7-16 and larger	9½
No. 2 Sisal, 7-16 and larger	8

LINSEED OIL: The following reduced quotations are announced on "City" Raw Oil by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....41 cents per gallon.
In lots of 5 barrels or more.....40 cents per gallon.

The "American" brand for respective quantities, 2 cents per gallon less.

The five barrel price applies only to deliveries of that quantity at one time.

Double Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Regular Boiled Linseed Oil, 1 cent " " " " "
Calcutta Oil.....62 cents per gallon

THE ALBANY TRADE.

We are able to report an excellent trade with prospects for its continuance until the end of the year, and we note specially the excellent demand there has been for sporting and athletic goods, which is quite a feature with our house. Also have an active business in pocket and table cutlery, plated ware, chafing dishes and other nickel, copper and polished brass articles for house use. These departments are becoming quite an important item with most of the Hardware dealers, and the attractive goods which the American manufacturers are producing are in great favor. The strength of the market on heavy goods is shown in the weekly market reports, and there appears to be a willingness on the part of the dealers to order as far in advance on these as the jobbers and manufacturers will take business. Collections are all that can be expected, and we sum up the whole situation as being very satisfactory in all respects.

ALBANY HARDWARE & IRON CO.,
C. H. Turner, Pres.

THE PHILADELPHIA TRADE.

Rarely have business conditions appeared so promising as they are to-day, as on almost all sides we hear most encouraging reports—not only are manufacturers busy, but the retailers throughout the country appear to be enjoying a safe and large demand, while the drop in the temperature of the last few days has given an extra snap to trade. Manufacturers tell us that it is easy to sell goods—the actual trouble is in furnishing them. If this demand was occasioned by a feeling of speculation, it would be natural to view it with distrust, but this is apparently far from the case. The writer had the pleasure of attending the National Jobbing Convention in Washington early in the month and was gratified at finding such a hopeful feeling displayed by both jobbers and manufacturers, not only for the present trade, but also for 1906. Naturally the market is strong—advances are being reported from day to day and the weak spots are few in number and far between, and from all indications Hardware in general is a safe purchase. Collections show some improvement.

BIDDLE HARDWARE CO.

THE CLEVELAND TRADE.

There is a very large production and consumption in iron and steel, and this always makes good times. The extreme prices may affect consumption, but the experienced and capable men with plenty of capital who control the business recognize this danger. Lack of sufficient capital and lack of ability have been the producing cause of booms and panics, that make steel king or pauper and pauperize all other business. There is very little speculation, and goods going into consumption are adding to the efficiency and income of the consumer, fertilizing, instead of exhausting, the resources that make for future business. A square deal benefits seller and buyer alike and promotes prosperity. It is a taking theory, and a good many people vote as they pray, this year, a very dangerous thing for bosses, and boodlers. The wakes that seem to have been held over the remains that belong to widows and orphans, have aroused the indignation of ordinary criminals. It makes lamb shearing in Wall Street semi-respectable. It if be true that the worse badness is, the better, it will surely furnish a specific against ordinary meanness.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE PITTSBURGH TRADE.

Business continues quite good in the jobbing line. Mail orders are more numerous and for better quantities showing that goods are needed promptly. The main difficulty now is to keep up stocks, as manufacturers are so crowded that jobbers' orders cannot be properly filled. Prices continue firm with an advancing tendency and we can consistently advise our retail friends to carry larger stocks than they have done, as they will not lose and may make money by doing so. Delegates to the Hardware Convention at Washington have returned and report a pleasant and profitable meeting. LOGAN-GREGG HARDWARE CO.

THE MINNEAPOLIS TRADE.

While we ourselves are practically out of business, or rather doing business in very limited quarters, still with the stock we have and the facilities for handling our trade, we are exceedingly busy and the volume of business is pretty well up with former years. This is just an indication of what we probably would be doing if we were in the usual shape to handle it.

The other Hardware dealers are very busy; this is equally true for both jobbers and retailers. The Northwest, like other sections of the country is in an exceedingly good condition. Our trouble about building, the high prices of lumber and labor is certainly affecting building operation, but to what extent it may have influence on operation for the coming season is uncertain, but we can see no reason why the favorable conditions of the present should not continue. W. K. Morison & Co.

THE DAVENPORT TRADE.

Give the Office Boy a Chance.

Yours requesting a trade letter from our general manager has just been discovered by me, though I might as well write as any one. About the only difference I see between the manager and me is, he smokes cigars openly in his office, while I have to hide to smoke cheap cigarettes—and he litters up the office and I have to pick things up and dust. I'll "dust" out of this in earnest some day, just as soon as some one wants me for a manager, with nothing to do but boss around, dictate letters to pretty stenographers, pay bills, buy goods, hire help, send off statements and loaf around generally. Well, the boss is in Washington, D. C., do you see, but what he is doing there will never be known way out here. He may be drinking high-balls with Fernley, philosophizing with Lockwood, exchanging inaccuracies with Kennedy, singing psalms with Williams, eating oysters at Harveys or playing cards for washing machines, coal buckets, carpet sweepers, egg fryers, or Harbeck & Neuhaus patent hog snooters at the Arlington. Anyway, he's having a better time than me and if this gets in print before he gets back, please say in your newspaper that a boy is looking for a job. The Office Boy at
Sickels, Preston & Nutting Co.

THE ST. PAUL TRADE.

The year is now drawing to a close and the jobber of Hardware is studying the records of the current year, as well as the prospects for the coming year, and planning the campaign for 1906. In this market, 1905 will be remembered as a year of remarkable development in some sections of our territory, a year when the volume of business was very large, and the crops, together with the prices at which they were sold, were very satisfactory. This last condition insures a good business for the first part of next year. The generally firm condition of the market is another factor which speaks well for the future. Collections are not as good as they should be at this season, owing to some extent to existing weather conditions and the car famine which is retarding the movement of grain, but the average condition of our territory is such that there seems to be no occasion for worry; the dealer is probably paying those bills which carry a large discount, for cash, such as stoves, implements, etc., and depending upon the Hardware jobber for such accommodations as he may need. In this way the burden falls upon those who do their business on the closest margin of profit and there seems to be no path out of the difficulty.
Hackett, Walther, Gates Hardware Co.

THE SAN FRANCISCO TRADE.

Commercial organizations in this city have this week been requested by the Pacific Coast Hardware and Metal Association to oppose an order recently issued by the Fourth Assistant Postmaster-General that may make it easier for mail order houses to use the mails for the transaction of mercantile business to the detriment of the wholesalers and jobbers and also of many retailers. The order referred to abolished the names from the rural delivery boxes and substituted numbers therefor, so that every rural delivery box will soon have a number unless the order is modified. The advantage that can be gained by the mail order houses by the proposed new arrangement is explained to consist in the ease and little cost with which the rural population may be reached. Mail order houses have provided large mailing lists heretofore, at considerable expense, to insure the receipt of packages of advertising circulars and other matter to enable them to get into touch with the rural population. When every box is numbered it will only be necessary to have a knowledge of the number of boxes in any district as a preliminary for sending broadcast the advertising matter calling attention to mail order houses. When the facts became known to the Pacific Coast Hardware and Metal Association letters were written to other commercial organizations requesting them to take action. The mail order matter would therefore seem as likely to be again discussed at some length on this coast.

Effective yesterday, November 15, the American Smelting and Refining Company, of this coast, announced concessions which will give the lead miners from 10 to 17 cents more a unit for their product. Railroad men, producers, smelters, buyers and dealers all agree that the rearrangement of prices will result in an immense impetus to the mining industry of the coast. Old mines, which long have been closed down because of the absence of profit, are to be reopened, and properties which have been only paying expenses are to be put on a profitable basis.

In my report of the last annual meeting of the California State Retail Hardware Association, months ago, it was stated that a committee was appointed to report on the advisability of an association insurance company. The committee has reported to H. C. Bennett, president of the State Association, as follows:

"We find that under the existing laws of the State we are unable to form a mutual insurance company. We find there are eight mutual insurance companies that insure members of retail Hardware associations and that most of them insure both merchandise and dwellings of such members, and we recommend that a list of all such companies be sent to all members of the association, and advise those thinking favorably of this form of insur-

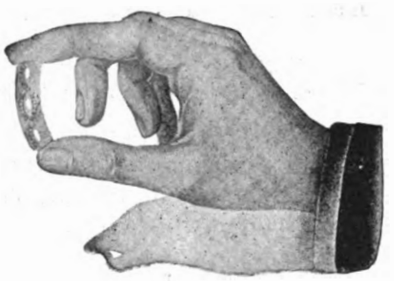
The Gillette Safety Razor--

Has the FIRST, and only NEW idea in RAZOR BLADES for OVER FOUR HUNDRED YEARS



Exact Size Complete Razor.

Although on the market for less than two years, the Gillette Safety Razor, judging alone by actual sales, is to-day used, appreciated and endorsed by *more* enthusiastic, discriminating shavers during this time than *all* of *the rest* of the so-called safety razor purchasers in the same period.

There is a reason for the success of the Gillette Safety Razor.

It is as *different* from other *so-called* safety razors as *other so-called* safety razors are from the old-fashioned razor.

The dealer who handles the **Gillette Razor** makes *liberal* profits, for the fixed retail price of $5.00 for a set *is*, and *will* be *maintained* under U. S. Patent laws, thus assuring every dealer a full profit.

The blades are as thin as paper, as hard as flint, as tough and flexible as whalebone.

The Gillette Safety Razor is made by *automatic machinery insuring perfection* and *uniformity* in every detail and a never varying quality which is so often found in the old-fashioned hand-make razors and blades.

The Gillette's Advantages

Our manufacturing facilities have been increased recently to meet the enormous and growing demand for the **Gillette Razor**, and this demand proves that it will certainly pay YOU to investigate at once the many advantages that are now offered in handling this phenomenal shaving device which is the talk of the civilized world.

Remember -- The Gillette while having *many imitations*, has no direct competitor, *is in a class by itself*, is here to stay, and its patents will be fully protected and all infringements on its rights will be prosecuted.

TWELVE BLADES.

TWENTY-FOUR SHARP EDGES

A Paying Proposition

No shaving proposition to-day offers you the inducements that the Gillette does.

Write to-day for further particulars and do not allow yourself to be persuaded to do otherwise by other *so-called* safety razors that have been put on the market, due solely to the phenomenal success of the **Gillette Safety Razor.**

Gillette Sales Co., **1104 TIMES BUILDING, BROADWAY, NEW YORK CITY.**

Are You A Gillette Safety Razor Dealer?

Then you will receive the benefit of the enormous advertising plans that are now being worked out, embracing Magazine publicity, Signboards, extensive catalog distribution, and in fact, *every known* and *up-to-date* method in the science of advertising.

By our publicity methods we are interesting and appealing to *millions* of shavers *every* month.

We are *spending more money* in *making known* the unique advantages of the **Gillette Safety Razor** than is being spent by all the combined, *so-called* safety razor manufacturers in the country, which benefits every Gillette dealer.

That this advertising is producing the desired results is a fact which we will prove to every **Gillette** dealer to his entire satisfaction.

If you are not selling the GILLETTE SAFETY RAZOR, Get into line, for once in it, means you are there to stay.

The "Gillette" cannot be put together in any way but the right way, and when so put together the blade is concaved and both edges are in the right position in their relation to the guards to be used with absolute safety.

Exact Size Set, Complete.

Greater Profits--- Greater Satisfaction

There are not only greater profits in handling this razor, but greater satisfaction because the **Gillette Safety Razor** is fully guaranteed, is backed by *responsible* and strong financial interests, and the razor itself is already endorsed by several hundred thousand users who are voicing its merits throughout the civilized world.

You see **Gillette** advertisements everywhere, and up-to-date dealers are joining our ranks every day.

Do not delay, but write us *at once* and let us show you evidence of such a nature that will make you regret the delay which for some reason unknown to us, has resulted in your name not being on our list of dealers.

ADDRESS TO DAY.

We Help Dealers Sell Blount Door Checks

TO push a line or not to push a line—that's the question. It's often decided in the negative because the Dealer has not time to study up plans — no time to mould the shot. In selling Yale & Towne Blount Door Checks, we furnish the AMMUNITION—booklets, blotters, folders, seals, envelopes, display cards, and a crisp little story called "The Peacemakers"—most of them imprinted with your name and address.

We lay the plans—a little booklet, "Suggestions for Selling" tells just WHAT to do and HOW to do it. YOUR part is to pull the trigger.

We help you ADVERTISE in newspapers too—send you electrotypes of advertisements that SELL goods—or write you special advertisements if you wish—furnish you street car cards, etc. All this is FREE if you write and ask for it.

The Yale & Towne Mfg. Co., 9-15 Murray St., New York

ance to write the home office of any or all companies or associations for further particulars.

I learned this afternoon at the quartermaster's office of the army that there were a goodly number of Pacific Coast bidders for supplies for the great canal connecting the two oceans, and that the bids closed on the 11th inst. and were forwarded to Washington. And subsequently I learned at the Osborn Hardware & Tool Company that the manager for the last few years, S. M. Scott, had sold his interest in the company to the two principal proprietors, J. P. and P. J. Eisenmann, and that this November business so far is 30 per cent. better than they ever before enjoyed. While making the call Carl Bergfried put in an appearance. Carl is showing Henckel's cutlery for Graef & Schmidt, New York, and reports this the best trip he ever had.

Dunham, Carrigan & Hayden Co. have issued an interesting booklet treating on the relative merits of soft steel and wrought iron. This is a subject that is of interest to all dealers and has been ever since the advent of soft steel as a rival of wrought iron. This book is not gotten up as an advertising scheme, but is a valuable treatise on the subject. Dunham, Carrigan & Hayden Co. will send one to any person making application.

The new big structures, the McFarland Building, at Devisadero and Green Streets, and the Frear Hotel, at Ellis and Jones Streets, are being outfitted with Corbin Hardware by the Palace Hardware Company.

Travelers in the trade report that Frennessen & Montgomery are starting a Hardware store at Colville, Wash., that Purdy & Smith are starting a Hardware and furniture store at Prescott, Wash., that C. G. Schrimpf has bought a site on Monroe Street, Spokane, for $4,900, on which to erect a two-story brick building to be occupied by his Hardware stock, with a tin shop on the second floor; that the Buckley Hardware Co. has succeeded the Minnidoka Hardware Co. at Burley, Wash.; that Carmondy Bros. have succeeded John Carmondy, Hardware and Implements, at Moro, Ore.; that Myers & Neyland, Hardware, at Lewiston, Idaho, have dissolved; that the Gateway Implement Co. is the name of a new firm opening at Stockton, Cal.; that F. B. Ladd has withdrawn from the Hardware firm of Pheister & Ladd, Paso Robles, Cal., and is now connected with the Mott Hardware Company in Oakland, Cal.; that the Albion Stove Works have secured the stove department of the Albion Iron Works at Victoria, B. C., and the Tacoma Tin Smelting & Hydraulic Co., of Tacoma, has been incorporated for $5,000,000, with the following trustees: U. P. Winekoop, F. Abiel, L. S. Walton and F. P. Morrow, of Tacoma, and H. Lewis, J. C. Allen and L. J. Richard, of Seattle. INDUSTRIAL PRESS ASSOCIATION.

THE USES OF A LOCAL EXHIBITION.

There is, perhaps, no better place for the Hardware man of an agricultural district to be than at the county Fair. People go there with the expectation of seeing and the leisure to examine the latest improved machine and they want a chance to see what it will do rather than the color it is painted. Even a home trial might be less satisfactory as, at the Fair, the machine is or should be in the hands of an expert who not only knows how to get all there is in it out to the surface but who can answer all the innumerable questions that a crowd can ask so much better than an individual can. In fact, the questions coming from a crowd often bring out points of interest that even the best of demonstrators would probably overlook.

Remember, though, that if a crowd can ask questions it can also forget. Better have good literature and plenty of it for them to take along. To make this effective and the least expense I like the idea of recording the names of people who are especially interested. Then keep close tab of the questions asked during the session and get out a special circular based upon the general desire for information on the subject as evinced by the questions; see that the people who took the trouble to register with you are supplied with one of these circulars and you have a good foundation upon which to work up a good trade.

Last, but not least, whatever the display, let things be tidy around it. Good taste in arrangement has a decided commercial value also; if you havn't it, at least you can be neat. Soiled aprons, greasy rags, dirty hands, misplaced articles and similar evidences of slackness or confusion are always detrimental to the very best display; in fact, a neat, clean and well kept booth is more attractive to the practical man or woman who is viewing with an idea of possessing than is the novel, elaborate and expensive display which serves to attract and hold a crowd of sight-seers.

TERMS EMPLOYED BY FORESTERS AND LOGGERS.

"Terms Used in Forestry and Logging," just published as Bulletin No. 61 of the Bureau of Forestry, affords the lay reader an insight into a strange vernacular.

The first half of the pamphlet is devoted to forestry. There we may read all the technical terms in good use, from "absolute forest land" to "yield table." Many terms explain themselves, but where they are not so readily understood the short definition makes plain at once the idea conveyed and the need of a special word or phrase to convey it. Perspicuity, percision, and common sense seem to have been the objects sought by the compilers.

On turning to the logging terms, which are listed in the last half of the bulletin, we come across some truly remarkable expressions—terms which, though evidently derived from slang, are now in good use among woodsmen either throughout the country or in the region denoted in each case. There the uninitiated may learn the distinction between a "ball-hooter" and a "boom rat," between the "bull cook" and a "cattyman" and find that none of them refers to any lesser animal than the logger himself. Among other creatures of the logging camp may be numbered also the "alligator," the "dolphin," the "dog," the "pig," and the "road donkey," all names of objects endowed with life by the vernacular of the logger. The "alligator" proves to be "a boat used in handling logs;" the "dog" a "short, heavy piece of steel;" the "pig" a "rigging sled;" and the "road donkey" a donkey engine mounted on a heavy sled, etc. Birds are represented by the "blue jay" and the "rooster" (also called "gooseneck"), reptiles by the "snake," and insects by the "katydid." A tenderfoot intending a visit among the brawny loggers in the North Woods, the Appalachian Forest, or elsewhere, should find it decidedly in order to take along this bulletin.

As the only reliable handbook of the kind in the language, Bulletin No. 61 will be in wide request among those interested in forestry and lumbering. It may be secured by application to the Forester, Department of Agriculture, Washington, D. C.

NEGLIGENCE—INTESTATE—ACTION—ALIENS.

The New York Court of Appeals held, in the case of Alfson, Adm'r, vs. The Bush Company, Limited, that an action may be maintained for negligently causing the death of an intestate notwithstanding his widow and next of kin are all non-resident aliens. The court said: "It is difficult to conceive of any argument springing from public policy, sound reason or a proper discrimination between the rights of the citizen and the alien that should prevent the alien husband, wife or next of kin of a laborer killed by reason of his employer's negligence from receiving those damages that a jury has awarded a local legal representative who derives his authority from acts under the control of the Surrogate's Court. The damages are imposed upon a negligent employer as compensation to those who suffer by his act, and there is no valid reason, as it occurs to us, why they should not be paid to the survivors, whether residing here or in some foreign jurisdiction. The statute not only benefits the survivors but protects the laboring man, as it tends to enforce observance by the employer of the rule requiring him to furnish his servant a safe in which to work."

COMMERCE IN MANUFACTURES AND MANUFACTURERS' MATERIALS.

The foreign commerce transacted by and for the manufacturers of the United States will amount to more than a billion dollars in the calendar year 1905. In the nine months ending with September, for which the Department of Commerce and Labor, through its Bureau of Statistics, has just announced its figures of our foreign commerce, the imports of materials for use in manufacturing amounted to $422,000,000, and the exports of manufactures amounted to $424,000,000, a total of $846,000,000 in nine months, or an average of $94,000,000 per month, or more than $3,000,000 per day for the manufacturing interests alone. Should the imports of manufacturers' materials and the exports of manufactures continue at approximately similar rates during the remainder of the year, the total of manufacturers' materials imported and of manufactures exported would considerably exceed $1,000,000,000.

Manufacturers' materials now form practically one-half of the total imports of the United States, or, to be more exact, 48.4 per cent.; and manufactured articles form practically 40 per cent. of the total domestic exports, or, to be more accurate, 39.26 per cent. In 1890 manufacturers' materials formed 33 per cent. of the total imports and manufactures formed but 20 per cent. of the total domestic exports. Manufacturers' materials imported in the nine months ending with September, 1905, were practically twice as great in value as in the corresponding months of 1890; while manufactures exported in the nine months ending with September, 1905, were practically four times as great as in the corresponding months of 1890, the figures for the nine months' periods of the years named being, for manufacturers' materials imported in 1890, $208,000,000, and in 1905, $422,000,000; and of manufactures exported in 1890, $113,000,000, and in 1905, $424,000,000. Thus the exportation of manufactured articles has grown much more rapidly than the importation of manufacturers' materials, suggesting that the exporters of the country are drawing, year by year, a relatively larger proportion of their raw materials from our own country.

The fact, however, that manufacturers' materials now form a larger proportion of the total imports than in earlier years suggests that the growing requirements of the people of the United States in other lines are now being more fully met through home industries than ever before, while an analysis of the imports now brought into the country shows that a growing share of these increasing imports is of articles requiring for their production climatic conditions not existing in the United States. Of tropical and subtropical products alone the quantity brought into the United States from abroad (including that supplied by its non-contiguous territory) amounted in the fiscal year 1905 to over $500,000,000, against less than $3,000,000 in 1890, and $140,000,000 in 1870, and much of this is manufacturers' materials, such as India rubber, raw silk, hemp, jute, tobacco, cabinet woods, chemicals, etc. Other classes of manufacturers' materials of which the United States does not supply sufficient for its own requirements are tin, hides, wool, and many less important articles, while considerable quantities of copper (of which the United States is the world's largest producer) are shipped from the adjacent countries of Mexico and Canada into the United States, where facilities for smelting and marketing justify this movement of copper into the greatest copper-producing country of the world—the United States.

Manufacturers' materials imported in the month of September, 1905, aggregated $47,000,000 against $24,000,000 in September, 1890; while manufactures exported in September, 1905, amounted to $48,000,000, as against $14,000,000 in the corresponding month of 1890. In the nine months' periods of the years named manufacturers' materials imported amounted to $422,000,000 this year to date, as against $208,000,000 in 1890; while manufactures exported amounted to $424,000,000 in 1905, as against $113,000,000 in 1890.

The table which follows shows the value of manufacturers' materials, crude and partially manufactured, imported, and of manufactures exported in the month of September of each year from 1890 to 1905:

Imports of manufacturers' materials and exports of manufactures during the month of September, 1890 to 1905.

September.	Imports of crude materials.	Imports of materials, wholly or partially manufactured.	Exports of manufactured articles.
	Dollars.	*Dollars.*	*Dollars.*
1890	16,003,602	8,510,829	14,011,947
1891	14,910,194	5,972,711	13,180,090
1892	17,737,392	7,144,193	12,162,076
1893	9,271,515	5,041,967	16,382,431
1894	13,964,663	7,307,170	15,329,554
1895	18,536,043	9,282,507	16,351,829
1896	9,981,508	6,377,945	21,699,345
1897	14,780,103	4,650,612	22,854,684
1898	14,046,165	4,537,358	25,020,047

READ TRADE PAPERS.

Trade papers have for many years played an important part in the development of American business, and every year finds them more widely read than ever before. This is as it should be, only it is to be hoped that men in all lines of business will realize the possibilities to be derived from the careful reading of literature of this kind, and that they will give it the attention and support it so richly merits. When one considers what an immense amount of good trade papers have done, it is only surprising that so few business men, comparatively, avail themselves of the many advantages and privileges placed at their disposal so generally and at such a reasonable price. While there are, of course, and always will be, papers of little or no value, there are on the ather hand a number which are really good and helpful.

As a matter of fact, no business man can really afford to be without several good trade papers. It would, indeed, be well for him to subscribe to at least half a dozen just as soon as he can afford to do so, for then he will learn to discriminate between those which are good and those which are not, and the money which he spends thereafter for the purpose of keeping in touch with the methods and doings of those in other as well as in similar lines will be more likely to be invested wisely.

One cannot, however, acquire wisdom or knowledge by simply enclosing a cheque for the amount of the subscription. If this were the case all men would quickly find themselves on an equal footing; business would be a continual joy, trade papers would in very short order be nothing more or less than insurers of business success at premiums ridiculously low. Which, interpreted, means that trade papers point the way, if one will only devote a small part of his time to reading them.

Few men are so busy that they have no time to read trade papers. The evenings at home cannot be spent to better advantage by him who wishes to achieve the greatest possible success than in reading one or more in an understanding way. Right here comes the rub—in an understanding way. And it is because a great many men do not know how to read a trade paper that they do not read them at all. They look for something that will fit their particular case, and if it does not immediately appear, they come to the conclusion that the paper is not worth while, and lay it down, to their own direct loss.

Now the right way to read a trade paper, or any other kind of paper, for that matter, is to place one's self in a state of mind which may be termed both perceptive and receptive. By doing so, one will perceive that which is of value and store away where it may readily be found when wanted, instead of reading the articles as if they were just so much reading matter which must

Digitized by Google

be read somehow or other. Then, that which may be read between the lines, so to speak, is often of much greater value than that which is printed, and the reader should always be on the alert to see and feel such things. Because an article is supposed to interest, primarily, retailers, is that any reason why a mail order man should not read it? Hardly, for it may contain a suggestion worth dollars upon dollars to him. To offset this, it frequently happens that retailers can learn much from what was intended, in the first place, for mail order men.

So it is in all lines. Everywhere pointers abound. One need only train his powers of discrimination, and all the wealth of thought from far and near is at one's service at a nominal price. And this wealth of information cannot possibly be otherwise than of decided benefit, properly used.—*Printer's Ink.*

SUPERB SHOOTING.

At the tournament given by the Columbus Gun Club, Columbus, Ohio, October 26-27, five of the first seven general averages were won with Peters' factory loaded shells. Mr. R. S. Rhoads, of Columbus, was high man for the two days with the total of 383 out of 400. Mr. Tryon followed closely with 381, winning second average. Mr. C. A. Young was fourth with 377; Mr. L. H. Reid fifth with 374; Mr. W. R. Clark seventh with 369. It is no wonder Peters' shells are popular with the representative trap shooters of Ohio, for they not only are made by an Ohio concern, but possess very superior shooting qualities, as evidenced by the above and many other scores.

Mr. James S. Day, representing the Peters Cartridge Company, and shooting Peters' Ideal shells, won high general average at the Tulsa, Ind. Ter., tournament, October 26-27, scoring 371 out of 400. These targets were going sixty yards in a hard wind, and Mr. Day's excellent work was the subject of much comment.

At the live bird shoot held at Sharon, Wis., the last week in October, Mr. Jay Graham shooting Peters' Ideal shells, won everything in sight with a score of 36 out of 37, and Mr. Stanton with the same ammunition won second money. The shooters present were all impressed with the wonderful effectiveness of Peters' shells, for nothing could have been nearer perfection than the loads used by Messrs. Graham & Stanton.

Mr. E. H. Storr won high professional average at the Weldon, N. C., tournament, October 24-25, and Mr. E. F. Killette high amateur average, both using Peters' Ideal shells.

JOHN A. ROEBLING CORPORATION, TRENTON, PLANS TO CONSTRUCT TOWN OF ITS OWN.

Kinkora Selected as Site—One Thousand Toilers' Families to Reap Benefit of Experiment.

John A. Roebling's Sons Company, Trenton's great wire and iron manufacturing corporation, is to be built at Kinkora, ten miles south of Trenton, N. J., a private city for the housing of its employees.

Arrangements were completed recently for the erection of three workingmen's hotels and nearly a hundred private dwellings, in addition to the big hotel and half a hundred private dwellings already erected. These buildings will be used exclusively for the housing of the company's employees who will work in the new rolling mill plant soon to be put in operation at Kinkora. The building of the mill and the completion of the city will represent an outlay of more than a million dollars. All of the work is to be done in less than a year.

Paved streets, private water and gas plants, electric lights, schools, churches, a library and other adjuncts of a modern city will be provided by the Roeblings, all for the use of the working men. None of the property will be sold and all of the houses will be rented at a very moderate rate.

Provisions will be made within the limits of the Roebling's city for the housing of one thousand workingmen and their families at the start, and more houses and additional hotels will be erected as the demands of the place may require. In the new hotels the rates of living will be so moderate that men who work with the pick and shovel will be able to live in them and keep well within their means. The conveniences will be strictly modern and special attention will be given to the sanitary arrangements.

For the married men of the bosses and the skilled mechanics class model homes of various sizes will be erected. These houses will be substantially built of brick and stone. They will be equipped with all modern improvements. The hotels and other buildings will be lighted by electricity, which will also be used on the streets. Electricity will be produced on the place and gas may be manufactured there.

The new Kinkora will be the Roebling City Beautiful. This has been provided for in the laying out of the town. Each of the streets will be one hundred feet in width, with ample sidewalks. All houses will be erected well back from the curb lines, with grass plots in front. Trees will be planted on each side of every street and each house will have its own flower beds and shrubbery. Each house will stand alone, with plenty of air space all around it.

The new town will be provided with a complete system of fire protection, including pressure mains, water to be supplied from a stand pipe eighty feet high. This is already built and is in the very centre of the city. Another important feature of the town will be the street cleaning department. Great care will be taken in the sewering of the place, and no mosquito and malaria breeding pools will be allowed to exist. The whole city will be governed by a code of rules yet to be formulated by the corporation, and persons who refuse to abide by them will be excluded.

The Roeblings, in the expenditure of this vast sum of money to provide cheap and at the same time delightful homes for their people, believe they will be repaid in that they will secure better results from the labor employed. If the experiment proves a success it is likely that the idea will be extended there and developed in other places where the Roebling plants are located. —*New York Herald.*

THE SOUVENIR HUNTER.

"A home for aged hotel employees could be supported in fine style from the losses caused to hotels by the souvenir fiends," said the manager of one of New York's big hotels. "No matter how great precautions the management takes, the drain goes on steadily, and, indeed, it seems to be increasing. The souvenir hunter not only takes silver spoons, but forks and knives. Silver cream pitchers and sugar bowls are especially in demand. Nor does it stop there; glasses, towels, match boxes, table covers, soap dishes—almost anything that is movable and wears the hotel's name is likely to be missing. I even know of one case where a pair of lace curtains were missing from the window after a woman whose social movements are of sufficient notice to be chronicled vacated a suite of rooms."

At a recent wedding one of the presents to the bride was a complete set of silver, which bore the names of hotels in New York, Boston, Chicago, Philadelphia and Washington. It was presented by three of the bride's girl friends, and they even boasted of the chances they had run in getting some of the larger pieces out of the dining rooms. They were proud of the feat, and would have been indignant had any one questioned their morals or the honesty of the proceeding.

Another young woman has a tea table entirely furnished with "stolen" china and silver. There is a story with every cup, and the hotels cover a trip half way around the world. She almost got into the clutches of the Berlin police by taking a silver mug from a famous restaurant in the German capital, her escape being entirely due to the willingness of her escort to pay several times the value of the article and tip every one in sight.

There are women who have collected trinkets of this sort and come by every specimen honestly. If they see a decorative plate or a monogram spoon they desire, they go to the office and offer to pay for it. If they are good customers or have occupied an expensive suite, the management generally refuses to take pay for the souvenir. Strange as it may seem, however, there is not the same interest in a collection gathered in this legitimate way and without petty larceny risks.

The Pullman Company has long suffered from those who want remembrances. They had an interest in a soap mine out in Arizona or some other Western State a few years ago. The soap in the toilet rooms of the sleeping cars on a number of railroads was just as it come from the mine.

It was beautifully colored, and passengers began to ask questions. No sooner did they learn that it was a mineral soap than they wanted a souvenir. The company could not supply the porters with enough soap to go around and had to abandon its use.

Another change in the equipment of sleeping cars is almost entirely due to this class. For years the berths were numbered in brass on a strip of plush which could be hung from the curtain rail. Travelers found them interesting mementoes of their trips, and when the porters were not looking tucked them into their grips. Now the numbers are fastened permanently to the curtains and a considerable annual loss avoided.

The silver expense account of railroads operating dining cars is greatly increased by passengers walking off with the silver.

Some of the roads, in an effort to stem the tide, issue most elaborate menus, generally having a cover engraved with a bit of scenery on the road. A series of these, neatly put up for mailing, is furnished to any passenger on demand, and the raid on dining car silver is becoming less fierce.—*House Furnishing Review.*

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Akron, N. Y.—D. E. & P. V. Strong have engaged in the Hardware business here.

Brooklyn, N. Y.—Fred J. Huff Co., has been incorporated with $50,000 capital, to deal in Hardware. Directors—F. P. Huff, E. Huff, Jr., T. S. Miller.

Franklin, Mass.—The R. C. Newell Co. has opened a Hardware and plumbing establishment.

Dayton, Ore.—J. L. & L. J. Castle have engaged in the Hardware business.

Kalamazoo, Mich.—The Post Hardware Co., has been incorporated with a capital of $5,000.

Lewis, Kans. The Central Hardware & Supply Co. has been incorporated; paid up capital, $15,000. Directors are A. Hardy, S. D. Misner, H. W. Hills, R. A. Wolfe, and J. F. Malin. The officers are A. Hardy, president; S. D. Misner, vice-president; Oscar Bridges, secretary; A. G. Smith, treasurer and Lee Hardy, manager.

Lexington, Mo.—McFarland Implement and Hardware company has been incorporated with $10,000 capital. Incorporators are C. Martins, E. T. McFarland and L. H. McFarland.

Milwaukee, Wis.—Klug Hardware Co. has been incorporated; capital, $30,000; incorporators, Oscar E. Klug, Alfred E. Klug and Henry Klug.

Oakland, Cal.—L. L. Veirs has opened a Hardware store here.

Ordway, Colo.—Ordway & Furniture company has been incorporated; capital stock, $15,000; directors, A. B. Corkin, W. S. Steen, A. D. Best, William H. Crane and John Johnson.

Peabody, Mass.—Peabody Supply Co. has been incorporated. Capital, $8,000. Objects, to deal in Hardware and building materials. President and treasurer, Wm. H. Fellows.

Petersburg, Va.—Cashon Hardware Co. has been incorporated; incorporators, C. C. Cashon, president and general manager; John R. W. Smith, secretary; W. M. Rucker, treasurer; all of Petersburg. Capital stock; Maximum, $15,000; minimum, $5,000. Objects and purposes: For the buying, selling by wholesale and retail Hardware, millers' supplies, paints and painters' supplies, etc.

Portland, Me.—Superior Malleable & Hardware Co. has been incorporated. Capital stock, $100,000. President, M. W. Baldwin; treasurer, Jas. J. Hernan.

Salem, Mass.—Deland Company has been incorporated to deal in Hardware; capital, $8,000; incorporators, John Deland, Jr., Walter B. Rice and George B. Goodhue.

St. Johnsburg, Vt.—The C. H. Goss Co. has been incorporated with $15,000 capital stock, to carry on the general Hardware business already successfully established.

Topeka, Kans.—Downs Hardware & Implement Co. has been incorporated. Capital, $25,000.

Worcester, Mass.—Ross Brothers' Co. has been incorporated to deal in Hardware; Capital, $75,000; incorporators, W. D. Ross, Charles W. Ross and Clifford T. Eldridge.

Changes and Improvements.

Almira, Wash.—Kunz & Kramer have succeeded to the Hardware and furniture business of Hughes & Kunz.

Anniston, Ala.—The City Hardware Co. has increased its capital stock from $12,000 to $25,000.

Beaumont, Tex.—The Wilson Hardware Co. is erecting a new building which will have a front of 105 feet and a depth of 120 feet, costing about $20,000.

Beaver City, Neb.—Wm. Yeiser has sold his Hardware and harness business to J. E. and Ed. Axtell, who will take possession at once under the name of the Axtell Hardware Co.

Columbus, Miss.—The Hardware firm of Harris & Pegues has dissolved and the business will be conducted under the firm name of Harris-McCown Hardware Company.

Davenport, Ia.—Louis Hanson's Sons are erecting a large wholesale Hardware house.

Derby, Ia.—J. J. Wolverton has sold his Hardware and implement business to Cherryholmes & Nesson.

Des Moines, Ia.—The Garver Hardware Co. has completed its new building and begun business. The building is 133 feet wide and 166 feet deep, six stories and basement.

Ferndale, Wash.—P. E. Wallin has purchased the business of the Kass-Hobersen Hardware Co.

Harrington, Kans.—A. E. Kneeland has sold his business to the Harrington Hardware Co.

Heber, Utah.—D. C. Hanks has sold his Hardware stock to the Heber Mercantile Co.

Jewell, Kans.—The Jewell Hardware Co.'s business has been sold out to Carl Welde and A. C. McCreasy.

Lebanon, Pa.—Unger Hardware Co. has purchased the building which they occupy and will erect two additional stories owing to the increasing business of the company.

Malvern, Ia.—W. H. Slayers has purchased the Hardware store of A. J. Kronsbein.

Mapleton, Ia.—The Mapleton Hardware Company has changed hands, W. E. Allen having sold out to Neil Duncan, of Pawnee City, Neb., who has taken possession.

Meadville, Pa.—A. F. Bail and Robert Graham have purchased the stock of the Krick Hardware Co.

Minneapolis, Minn.—The Hurty-Simmons Co., wholesale Hardware dealers, are erecting a large warehouse.

Montague, Me.—Guy Weatherbee has sold his Hardware store to Wm. Matthews of Bangor.

Neche, N. D.—The Hardware firm of C. E. Fee & Co., which has been in business here for several years, has removed to Bantry, one of the new towns in McHenry County.

Northboro, Ia.—McMichael & Roub have succeeded to the Hardware and implement business of Miller & McMichael.

North Fort Worth, Tex.—L. H. Garoner has purchased the interest of H. H. Lewis, in the Hardware firm of H. H. Lewis & Co.

Pocahontas, Ia.—C. A. Parker, of La Crosse, Wis., has bought out G. U. Allsever's Hardware store.

Pittsburg, Pa.—Demmler & Schenck, Hardware dealers, are erecting a six-story warehouse which will cost about $60,000.

Standish, Mich.—A. Hanses, of Beal, has bought out W. A. Daugharty's Hardware store here and will conduct the business in a new store erected for that purpose.

Toronto, Can.—The Aikenhead Hardware Company has purchased, at a price in the neighborhood of $60,000, the building known as the Dunlop Tire building. The Aikenhead business will move into the new place in the near future.

Fires.

Birmingham, Ala.—The comparatively new five-story building occupied and owned by the Moore and Handley Hardware Company has been destroyed by fire. The loss is estimated at between $300,000 and $325,000. Insurance to about two-thirds of the loss is carried by the company.

Brewton, Ala.—Fire seriously damaged brick structure and practically destroyed stock of goods of Luttell Hardware Company. Loss, $12,000, with $4,500 insurance on stock and $2,500 on building.

Walla Walla, Wash.—Fire recently destroyed W. G. Cullen's Hardware store. Loss, $6,000. No insurance.

New Incorporations, Etc.

Iuka, Tenn.—Iuka Hardware Co. has been incorporated with a capital stock of $10,000. Incorporators are: W. O. Jackson, W. W. Harvey and others.

Spokane, Wash.—The Holley-Mason Hardware Co. is building a two-story brick structure, 100x142 feet. The building will cost $16,000 and will be used as a warehouse and shipping department.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers, the country over, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Stores, Incorporations, Etc.

Aurora, Ill. The Richards Standard Manufacturing Company has been incorporated. Object, manufacture of Hardware specialties. Incorporators, M. C. Richards, Charles Richards and G. H. Richards.

Baltimore, Md.—The Automatic Butter Cutter and Weigher Co. has been incorporated. Capital, $50,000.

Buffalo, N. Y.—The Republic Metal Ware company has been incorporated with a capital of $1,500,000.

Camden, N. J.—Pacific Hardware & Steel Company has been incorporated. Capital, $10,000,000.

Camden, N. J.—The O'Malley Manufacturing Co. has been incorporated to manufacture and deal in stoves, heaters, boilers, radiators and parts; capital, $100,000; incorporators M. F. O'Malley, J. B. Anderson, Wilfred B. Walcott.

Geneva, N. Y.—Dorchester & Rose Co. has been incorporated. Objects, manufacture of Hardware and Hardware supplies. Capital $25,000. Incorporators: O. J. C. Rose, Edward C. Dorchester, Joel Page, Joel A. Page, Melvan S. Gaylord.

Groton, N. Y.—The Mosher Manufacturing Co. has been incorporated to manufacture Hardware specialties; capital, $100,000; directors, C. P. Mosher, G. M. Stoddard, Ben Conger.

Jamestown, N. Y.—The Jamestown File Works has been incorporated for the purpose of manufacturing all kinds of commercial files. Directors are President, D. D. Lewis; secretary, Roland M. Taylor; treasurer, William Hjorth; Arthur W. Hjorth and John A. Johnson.

Rochester, N. Y.—Wellman Manufacturing Company has been incorporated to manufacture Hardware. Capital $40,000; directors; S. G. Wellman, D. D. Wellman, R. H. C. Wellman.

Youngstown, O.—The Reliance Edge Tool Co. has been incorporated with a capital stock of $75,000. The incorporators are Cecil D. Hine, Guy E. Dudley, Walter A. Beecher, John C. Wick and E. L. Brown.

Changes and Improvements.

Albion, Mich.—The Union Steel Screw Co., of Jackson, will occupy the old building of the American Harness Co. Having outgrown its present quarters, it was decided to move. The company is capitalized at $200,000 and has orders ahead amounting to $26,000. Albion capitalists have subscribed for $6,000 of stock. R. F. Agnew is the new president of the concern, which employs about thirty men in the manufacture of wire screens, and wire ware in general.

Berwick, Me.—Atlas Machine Tool Co., has been incorporated for the purpose of manufacturing and dealing in machinery, tools and metallic goods and wares, with $50,000 capital stock, of which $300 is paid in. Officers: President, Daniel A. Trefethen, of Taunton, Mass; treasurer, John W. Stavers, of Taunton, Mass.

Canton, O.—The Canton Stove Mfg. Co. has been established and will occupy the newly bought plant formerly owned by the wringer company.

Chelsea, Mich.—The Glazier Stove Co. is erecting a new three-story factory building, 150x200 feet, giving 60,000 square feet of floor space.

Columbus, Miss.—The New South Plow Works will begin the operation of its new plant at an early date. This plant has been under course of construction for some time past and is one of the finest of its kind in the United States. The company was organized about a year ago with a capital of $25,000 and during the first six months of their operation the volume of business demanded of the enterprise was far beyond the capacity of the plant. Last spring the capital stock was increased to $100,000 and the new plant is the result of the movement. The stock is owned by local capitalists.

Fond du Lac, Wis.—The Gurney Refrigerator Co. has equipped its factory with a new 500 horse-power engine, having outgrown its former equipment.

Houston, Tex.—The Lattimer-Williams Mfg. Co. are building an addition to their store plant owing to the large increase in business.

Kingston, N. Y.—The Brown Mfg. Co. and the Measure Mfg. Co. have been merged and will occupy the former company's plant. The Brown Mfg. Co. has been manufacturing Hardware specialties notable among which is the Cyclone egg beater. The Measure Mfg. Co. has been manufacturing steel and cloth tape measures, and the new owners will continue both branches of the business.

Lancaster, N. Y.—The Lancaster Machine & Knife Works is completing an addition to its plant, which will be used as a nickel-plating department.

Lancaster, O.—The Ohio Lock, Nut & Bolt Co. is erecting a factory for the manufacture of its patent lock bolts. A 50 horsepower engine and machinery for the manufacture of 15,000 track bolts per day will be installed at the start, and this equipment will be augmented by other machinery as demanded.

Lansdale, Pa.—The Abram Cox Stove Co. of Philadelphia is erecting a pattern storage building, which will be 45x128 feet, three stories high and fire-proof throughout.

New Haven, Conn.—The Fowler Nail Co. has increased its capital stock from $60,000 to $120,000.

New Orleans, La.—E. C. Atkins & Co., the well known Saw Manufacturers, have opened a branch house here.

New York, N. Y.—Weibusch & Hilger of No. 9-15 Murray Street have taken over the selling portion of the business of the Findlay Axe & Tool Co., of Findlay, Ohio, and, with a few reservations, will market the company's entire product in the United States and foreign countries.

Watertown, N. Y.—Bents, Bushnell & Co., is the name of the new Hardware firm succeeding Pool, Bents & Co.

Western, Neb.—Staska Bros. have been succeeded in the Hardware and implement business by J. J. Staska.

Yarmouth, Ia.—Bozarth & Featherby have been succeeded in the Hardware business by W. S. Bozarth.

OPINION OF A HUSTLING AMERICAN.

The hustling American to whom I wrote said in reply that he was always open to consider new agencies, but was not willing to undertake to put on the English market any article he did not have control of. He added perhaps he should modify the word "control," for he did not pretend to know everything, but claimed he knew more of the necessities of the situation than the American manufacturer who might wish him to develop a trade here. He said for many years he traveled in the United States; that his journeys were not limited by small areas, and his business was such that he came in contact with all the large manufacturers. He is now endeavoring to take advantage in England of the experience he has had in England and in those many years of hard work in the United States. He thought I had perhaps seen more even than he of the great number of "our American friends who come over here, make a hurried visit to some commercial center or centers, and because they have not accomplished what they expected returned dissatisfied with their visit, report unfavorably on the business possibilities here, when if they had put in sufficient time in Great Britain to have given full study to the situation here and then devised a scheme for meeting and besting the situation their reports would have been different, and probably they would have secured a very fair line of orders." He claimed, also, that if one of these manufacturers "could not afford to give the time to the proper development of an English business he had put the matter in the hands of some one who, like himself, knew both countries and deferred to that man's view of the trade necessities, these views based on international experience, it would have generally been possible to develop a profitable business." In conclusion, he said that whenever he found American manufacturers desiring an English trade who were willing to back up their profits, if he also had confidence in the article, he was willing to put in his time and his connection to develop the sale of such article, but if these manufacturers were not willing to guarantee him exclusive selling rights during sufficient length of time to amply repay him for his introductory work he would not care to bother with the article and was not willing to take the trouble to write a single letter to any manufacturer who wished pay for his goods before they left the factory doors. He does not care to trade "sight unseen," for he does "not care to be in a position where he can only whistle for his losses, if, after he has put an article on the market and is responsible for the quality, anything should prove wrong with the goods." His opinion is that such methods as he has expressed himself "as opposed to are not conducive to securing business here, nor were they ever in his experience methods for securing business in the United States."

STAR SAFETY RAZORS

Leads all others in the number of Highest Awards received at various Expositions.
They also received the Highest Award, the Gold Medal, at the Lewis & Clark Exposition, 1905.

WHY hesitate to carry a line of Star Safety Razors and Supplies when you have the opportunity of procuring a handsome display and stock case with small and large assortments of Star Safety Razors, which assists in disposing of a quantity of them and also knowing that the retail prices are strictly maintained so as to assure the dealer of a good profit?

The Star Safety Razor has stood the test for the past twenty-five years and our vast experience in all these years has helped to make the Star Safety Razor the most practical and the only mechanically perfect safety razor in the market to-day.

Our Star Safety Razor Blades cannot be equalled in quality and workmanship anywhere in the World.

STAR BLADES are hand-forged from high grade special refined bar steel. Each blade is hardened and tempered individually. They are concaved and honed by hand on scientific principles—this is the OLD FASHIONED PROCESS; IT CANNOT BE IMPROVED UPON. In addition to this the Star Safety Razor Blade is a MAGNET in itself—will never irritate the skin and will retain a keen cutting edge as age improves its keenness and cutting qualities.

The Star Safety Razor has a reputation for quality and superiority throughout the civilized world. More Star Safety Razors are in daily use than all other makes combined, and these daily shavers are our best advertisers. They are constantly recommending the Star Safety Razor to others.

Merit alone has brought about these results.

FOR THE HOLIDAY TRADE.

How is your stock of Star Razors? Are you prepared to meet the demands of the Public?
They are extensively advertised to create a demand and profit for the dealer.
You make no mistake in offering the reliable Star Safety Razors as Holiday leaders.

WHY SHOULD YOU SUFFER? Be your own Chiropodist

SIMPLE *USE THE* **STAR SAFETY CORN RAZOR**

SAFE

SURE

THE most painful and annoying corn may be removed in a minute with this simple device. You cannot cut or injure the foot.—**Price, $1.00.** On sale this week at our Cutlery Department or by mail on receipt of price.

KAMPFE BROS., 8--12 Reade St., New York

BICYCLE AND SPORTING GOODS RECORD.

Bicycle manufacturers and dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

Chicago, Ill.—Illinois Sporting Goods Co. has been incorporated with $10,000 capital, to manufacture sporting goods. Incorporators are Frank L. Sheldon, Susie Shoemaker and Harry S. Keeler.

Gloversville, N. Y.—The "Ibex" Sporting Goods Co. has been incorporated to manufacture sporting goods, etc.; capital, $5,000. Incorporators: George W. Davis, Samuel D. Merrill, Fred. D. Ostrander and John H. Lee, all of Gloversville, N. Y.

Gloversville, N. Y.—The Consolidated Sporting Goods Co. has leased a factory for the manufacture of base ball gloves, automobile and hunting clothing, footballs, base balls, punching bags and everything in the sporting goods line made from leather.

Hammondsport, N. Y.—The C. H. Curtiss Mfg. Co. has been incorporated. Capital $40,000. Directors: G. H. Curtiss, A. G. Pratt and R. G. Hall. Object, to manufacture motorcycle Curtiss already has ripe for marketing a brand new single cylinder 3 horsepower motor bicycle that is said to be an uncommonly good one, and his acquirement of ample capital will not only enable him to produce it on a much larger scale than was originally in view, but it will also further a two cylinder machine, the design of which is already in hand.

Malden, Mass.—United Automobile Supply Co. has been incorporated to deal in automobies; capital, $40,000. President, H. C. Prescott; treasurer and clerk, F. M. Prescott, Malden, Mass.

New Orleans, La.—Arthur Mitchel, the professional bicycle rider has established himself in business under the name of the "Mitchel Cycle Co."

New York, N. Y.—New York Blind & Transom Adjuster Co. has been incorporated to manufacture motors, machinery, etc. Capital, $100,000. Incorporators are Henry Amerman, Harry S. MacCarlney, Charles R. Barge, all of New York.

Utica, N. Y.—The Consolidated Motor Company has been formed for the purpose of dealing in motor cars, autos, bicycles and other vehicles and the supplies therefor, the renting and storing of such prop- the corporation is $50,000, divided into 500 erty, and the transportation of passengers and goods and the manufacture of engines etc. The amount of the capital stock of shares of the par value of $100 each. The corporation will begin business with $15,000. The duration of the concern is to be perpetual, and the number of the directors is to be seven. The incorporators are: Francis P. Miller, Harry H. Mundy, George H. Norris, C. Harrison Norris, Edward J. Otis, Arthur B. Maynard and T. Harvey Ferris. The concern grows out of the Miller-Mundy Motor Car Company, which has been engaged in a similar business here for some time. The name of the Miller-Munday will be dropped in the new corporation. The officers of the company elected at a meeting held at the Miller- Miller-Mundy will be dropped in the new Francis P. Miller; vice-president, Edward Ot's; secretary, Harry H. Mundy; treasurer, C. Harrison Norris. A large new garage is to be erected, it is said, in the spring.

Changes and Improvements.

Alpena, Mich.—C. C. Hall has purchased the business of C. V. Hicks.

Middletown, N. Y.—The John H. Clearwater sporting goods business has been purchased by Charles H. Clearwater, a son, and Wesley Osborne, who has been employed there for a number of years. The firm name will be Osborne & Clearwater.

Boulder, Colo.—Neisheisel Brothers and B. Charles Garbarino, doing business under the firm name of Neisheisel Bros. Auto & Cycle Co., have dissolved partnership. Niesheisel Bros. will continue to run the business.

Providence, R. I.—The Pope Mfg. Co. has discontinued its branch in this city. Its effects, which included some six hundred bicycles and a large stock of accessories, have been purchased by the Shepard Co. who will hereafter have the agency for the Pope bicycles. The Shepard Co. is a large concern, which has handled bicycles in rather a small way, but which will now very considerably enlarge its interests in that direction.

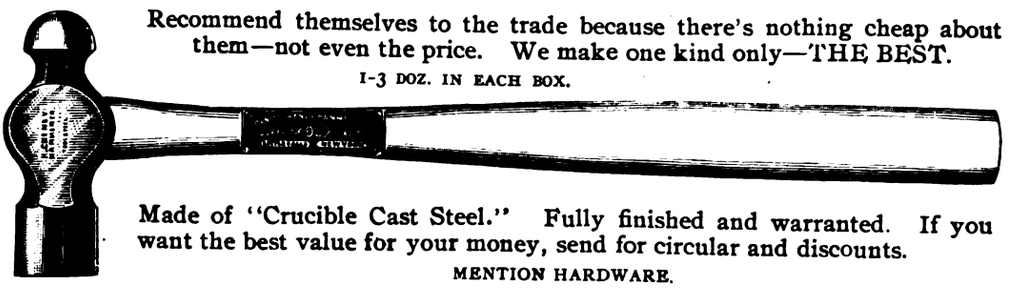
EXPORT COMMISSION HOUSES.

There are a great many Canadian manufacturers who do an export business, a portion of it being done in an intelligent and satisfactory manner, and a great deal of it done with ungratifying results; and there are others who would like to engage in such trade, and who understand that certain trade formalities should be complied with, but who are in ignorance of them, and therefore the *New York Commercial*, which gives a great deal of attention to the commercial affairs of that country, particularly to export trade when engaged in by manufacturers, offers some suggestions in that direction which are of equal interest to Canadian exporters. It says:

There are in New York City upward of 300 export commission merchants, says the *New York Commercial*. Most of these firms have their headquarters here, with branches and agencies in various parts of the world, but many are foreign houses with local buying agencies in New York. These concerns do an immense volume of export and import trade in all kinds of merchandise. Their relation to the import trade, however, has no bearing upon the subject matter of this article. As regards the export trade, however, the commission merchants virtually act as purchasing agents of the foreign importers, buying only upon instructions from the foreigners.

If a merchant in New Zealand, for instance, wishes to buy American baby carriages, he advises his New York commission merchant to that effect. The latter thereupon obtains prices and catalogues from all American manufacturers whose names he can obtain, forwards the information by quickest mail to his New Zealand client and awaits instructions. In due course of time the New Zealand importer instructs the New York commission house to order a certain quantity of specified styles from one of the manufacturers whose catalogues he has received. The commission merchant then forwards the order on his own blank forms to the manufacturer with full instructions for shipping, packing and invoicing. The goods are invoiced to the commission merchant and the invariable custom among commission merchants is to take advantage of all cash discounts, which means that the manufacturer has his money in hand in ten days, or in most cases, before the merchandise actually leaves New York.

The part of the commission merchant, therefore, will be seen to be mainly clerical. Very rarely does he have any voice in the selection of goods, and never does he have authority to place orders without instructions from his clients, and he cannot be expected to buy goods until he has had instructions to do so, or to place quantities of merchandise in stock, and he certainly is too prudent to tamper with instructions from his foreign clients. He received his compensation in the form of a buying commission paid by the foreigner, and is under contract to give his client full advantage of all discounts offered by the manufacturers.



In some cases where commission houses act as manufacturers' agents, they obtain an extra commission for their services as selling agents, but as a rule they cannot be counted upon for active work in the introduction of American goods abroad. Many of the more conservative houses regard it as beyond their privileges or duties to recommend or advise their clients as between competing lines. Their attitude has to be that of disinterested observance of all the demands and requests that come from their foreign clients.

It will thus be seen that time spent by ambitious manufacturers in an effort to persuade business from the commission houses might be used to better advantage. Instances are common of manufacturers starting out to conquer the world's markets by calling upon the New York export commission trade in the expectation that the commission merchants would at once purchase large stocks of their goods and send them broadcast to their branches all over the world. The commission houses never do that, and the manufacturer who tries to make them do it only makes himself a laughing stock among them. Their trade is worth cultivating in every sense of the word, and every manufacturer who expects to enjoy any export trade whatsoever should by all means look for their business and insure their constant attention to his line in anticipation of the time when they will have orders for his goods. But the manufacturer need not expect that he can send one of his salesmen to New York for a journey around the export district and see him returning to headquarters in a week or ten days with a book full of orders.

A large number of manufacturers seem to have only a faint conception of the functions of the commission house in the export trade. Many manufacturers enjoy a large volume of trade with these houses, and fully appreciate their part in the business and their methods of dealing with the foreign importers and the domestic exporters. On the other hand, the impression seems to prevail in some factories and offices that the commission merchants are big jobbers and general dealers for their own account. Nothing could be further from the truth.

PRICES CURRENT

The prices in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

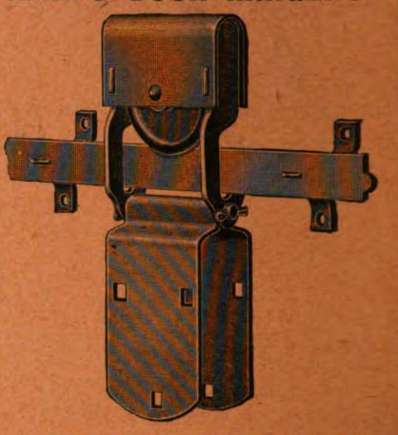
Wire Straightened and Cut to Length



No. 31 Torch, $2.50 Net.

The No. 31 we consider to be the best torch on earth. It is fitted with a powerful generator that is not affected by wind or extreme cold, works perfectly even where the mercury crawls away down the tube to forty below zero, and has never failed to please particular users. It uses less gasoline than other makes, therefore soon saves its cost. Jobbers supply at factory price under our guarantee "Your money back if you are not pleased." Our catalog is free. It describes over sixty styles of fire pots and torches.

FLETCHER, TERRY & CO., Forestville, Conn., U. S. A.

We Help Dealers Sell Blount Door Checks

TO push a line or not to push a line—that's the question. It's often decided in the negative because the Dealer has not time to study up plans—no time to mould the shot. In selling Yale & Towne Blount Door Checks, we furnish the AMMUNITION—booklets, blotters, folders, seals, envelopes, display cards, and a crisp little story called "The Peacemakers"—most of them imprinted with your name and address.

We lay the plans—a little booklet, "Suggestions for Selling" tells just WHAT to do and HOW to do it. YOUR part is to pull the trigger.

We help you ADVERTISE in newspapers too—send you electrotypes of advertisements that SELL goods—or write you special advertisements if you wish—furnish you street car cards, etc. All this is FREE if you write and ask for it.

The Yale & Towne Mfg. Co., 9-15 Murray St., New York

SCHOFIELD'S ACME DUST PAN

Never spills dust and dirt as ordinary dust pans do. It can be pressed so snugly to the floor (without stooping) that every particle of dust is taken up. When raised the dust is dumped in the pocket, allowing the pan to be carried without spilling the contents.

It is made of steel and will outlast ten ordinary pans. It's a time and labor saver for the housewife and a money maker for you. **Retails for 25c.**

Your Jobber sells them. Order a sample doz. to-day.

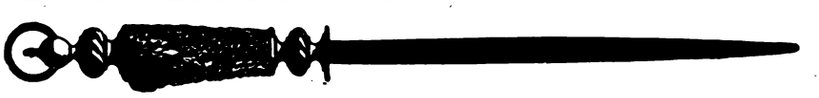
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

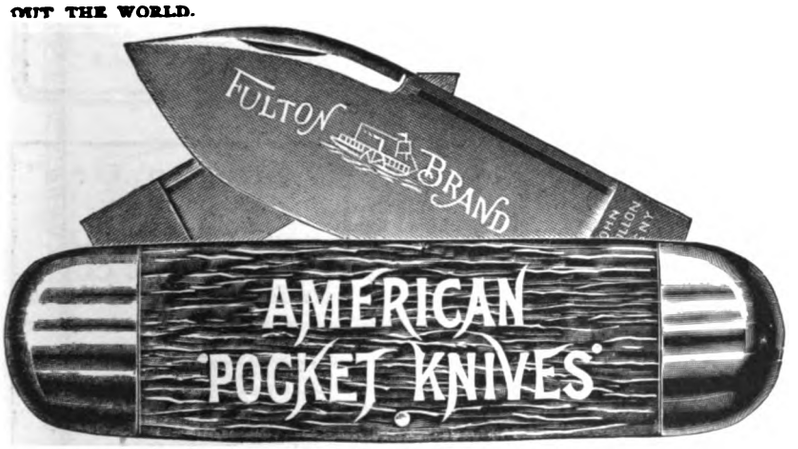
has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.



and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

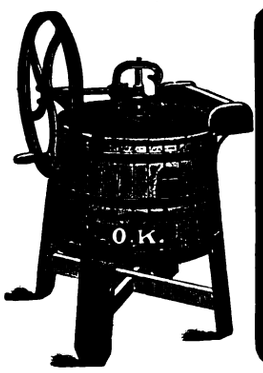
FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.



These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.



Finest Quality American Pocket Cutlery in large variety. Knives that are good sellers and will give satisfaction to the user.

ESTABLISHED 1835

JOHN CHATILLON & SONS, New York City.

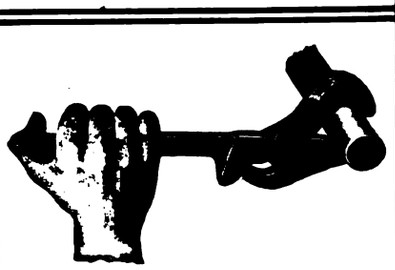
The New Wayne Rotary Washer

THIS MACHINE is built to satisfy those women who desire nothing but the best and it fully meets every requirement the most exacting customer may demand. Its strikingly handsome appearance attracts the attention of women at first sight and its many exclusive features can be so convincingly explained that sales are quickly made.

Wayne Tubs are made of the finest kiln dried Cypress and are finished in Cherry with two coats of varnish. The hoops are finished in Silver and Gold Bronze. All mechanical parts are of the finest material, carefully adjusted and will last for years. The legs are detachable or stationary as ordered. Every part of this machine is of the highest standard quality.



We will gladly forward interested dealers full particulars and prices.

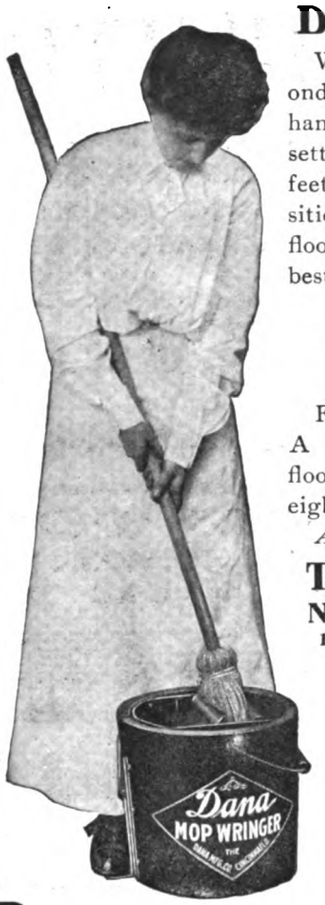
The Success OF THE Peerless Iceland

led us to make other things which appeal to the women in the home and are handled by the same jobbers and retailers. The trade, we think, recognizes that they can count on us to help move anything we make.

Peerless Iceland Freezer



(Ice Cream in Three Minutes)

Simplest freezer made. Patented dasher does the work. Better than ever this year. The product of our new factory—better facilities. This, and strong advertising make it the Freezer the women ask for.

Frezo Freezer

An excellent freezer, double scrapers fastened same way as in Peerless Iceland. All sizes.

Dana Mop Wringer

Wrings the mop dry in five seconds—does it without wetting the hands and without danger of upsetting the bucket and wetting the feet. You stand in a natural position—both feet rest firmly on the floor. The latest, the simplest, the best Mop Wringer on the market.

Dana Iceless Refrigerator

For the window. No ice bill. A refrigerator that takes up no floor space and is run without ice eight months in the year.

Ask your jobber.

The Dana Mfg. Co.

New York, 10 Warren St. **Cincinnati.**

(For the Window)

A Long (K)Night In HARDWARE

¶ For years retail hardware men have been groping in the dark, looking for some efficient way to increase their business—some of them have found it!

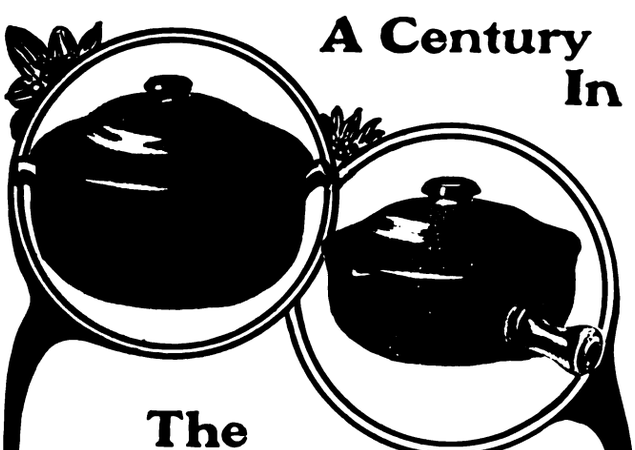
Warren's Patent Sectional Glass Front Shelving

is designed and manufactured by a Hardware Man for Hardware Men.

¶ You can keep a line of samples of your entire stock on exhibition at all times.

¶ It preserves each article in the same attractive newness that it comes from the factory, prevents *dust, rust, finger-marks and dirt.*

¶ It enables you to sell goods to a *German*, a *Scandinavian* or *any* other foreigner who, even though he cannot speak English can *point* to what he wants.



¶ It improves the appearance of your store *100 per cent;* enables your salesmen to spend their time *selling* goods instead of *hunting* for them, and will *pay for itself in one year.*

¶ Send dimensions of your store and let us supply you—FREE—with a color plate made to scale showing how *your* store will look when equipped with The Best Shelving in the world for your purpose.

¶ Remember the shelving is made on the unit plan—if you want to experiment—don't wish a complete outfit now—you can buy one—two—three stacks or sections—the rest will follow as your satisfaction increases.

In the Scale of Durability

Coes' New "Hammer Handle"

Model is as strong as Coes "Steel Handle" and 30 per cent. stronger than any other Wrench made.

It is the best balanced, smoothest, and best finished wood-handle Wrench.

The "Hammer Handle" is the largest "one-handed" Wrench ever made. The handle is heavier, made of hard wood—heavier than has ever been put on a Wrench before.

It fills the hand—no gripping power is lost.

There's nothing so pleasing to the hard-working merchant as

The Jingle of Profits

at the end of the week. Coes' Wrenches are full of profit for the dealer, because mechanics everywhere "swear by" them—not at them. That's the reason why Coes Wrenches

Never "Queer" the Dealer

Don't take our word for this statement, but make a test.

---

15 in. size now ready; 10 in., 12 in., 18 in. and 21 in. sizes will be ready soon.

Having It All His Own Way

The Dealer who carries a full assortment of "Bristol" Steel Fishing Rods is going to have things pretty much his own way with the fishing tackle trade.

There is no other rod maker doing half the advertising we are—no other rod proposition that appeals so strongly to anglers.

"Bristol" Rods are good rods—even the most insistent adherent of the old fashioned wood rods admit their superiority once they have given them a trial, and the new generation of anglers accept them as the natural result of evolution in fishing rod manufacture.

We have fought the battle. We have won the victory. We have created the demand. Will you fill it?

Order from your Jobber.

Our Rods are the *original* Steel Fishing Rods. We have been making them for over fifteen years. Look for our name and trade mark "Bristol" on every reel seat. They are absolutely guaranteed to be free from defect in material or workmanship.

The Horton Mfg. Co., BRISTOL, CONN, U. S. A.

"SIMILAR"

A CERTAIN tool manufacturing company adorns the pages of the catalogues it gives to hardware buyers with a rubber stamp impression like this:

Similar to Starrett's No.....

That Starrett Tools are the standard is a fact which we have for some time, and with strenuousness and persistency, tried to impress upon mechanics and the trade, and we have been to some expense and a good deal of labor to accomplish this purpose. It is therefore gratifying to find a competitor backing up our advertising with such an unqualified endorsement. We deeply appreciate the compliment.

It is doubtless unnecessary to suggest that live hardware dealers will still prefer Starrett Tools to any whose highest claim is that they are "similar."

HARDWARE

The Glen Mfg. Co., of Ellwood City, Pa., manufacturers of "The Glen Steel Folding Mat" has brought suit for infringement on their patents against Geo. C. Sleeth of New Jersey who makes a steel mat known as the Rossman Mat sold by the Rossman Manufacturing Co. The Glen people state that they are going to vigorously prosecute their suit and desire to warn all dealers of the danger they run in handling infringing articles.

✤

As is their usual custom, the Bissell Carpet Sweeper Co. will show their full and complete line of carpet sweepers, including many new and elegant finishes, at the New York Furniture Exposition, Forty-third St. and Lexington Ave., N. Y., from Jan. 5th to Feb. 3rd, 1906. Space 109, 3rd Floor.

✤

RAPID ADDRESSING MACHINE COMPANY, 290 Broadway, New York, N. Y., have sent us a copy of their latest catalogue of Rotary Addressing Machines and other office requisites, such as Stencil Box Cabinets, Stencil Typewriters, etc. The catalogue will be found very interesting and parties desiring same will receive one promptly on request.

✤

THE TAUNTON LOCOMOTIVE CO., Taunton, Mass., have sent us an eight page folder which gives a list of the various kinds of Machinery Tools and Fixtures offered for sale by them, including Lathes, Screw Cutting Engine Lathes, Planers, Shapers, Upright Drills, Boring Machines, Gear Cutters, Milling Machines, Arbor Presses and also a long list of miscellaneous supplies. For Information, prices, etc., apply to the representatives of the Works at Taunton or to Hill, Clarke & Co., 156 Oliver St., Boston, Mass.

✤

HILL, CLARKE & CO., 153 Greenwich St., Cor. Liberty, New York, N. Y. have issued a leaflet announcing the consolidation of P. Blaisdell & Co., Draper Machine Tool Co., and the Whitcomb Mfg. Co., stating that this amalgamation has given them a surplus of machine tools, mostly Lathes and Planers, which they offer at very attractive prices. If you care to obtain a list of these Lathes and Planers, showing dimensions, etc., send for a copy of this very interesting circular.

✤

THE NATIONAL MOTOR BOAT AND SPORTSMAN'S SHOW will open at Madison Square Garden, New York City, Febuary 20, 1906, and continue up to and including March 8. This promises to be the greatest show of its kind ever held in this country, judging from the number of applicants for space, which include nearly all the old exhibitors and many new ones.

SIMONDS MFG. COMPANY.

The annual meeting of the branch house managers and salesmen of the Simonds Mfg. Company, manufacturer of Saws, was held at the main office and works, at Fitchburg, Mass., during the week beginning November 20, with the usual excellent results which come through discussions of this sort. Those who attended the meeting were: Daniel Simonds, president; J. E. Kelley, secretary; M: Simonds, assistant treasurer; H. B. McDonald, assistant superintendent; T. F. Howarth, auditor, and H. D. Horton and W. G. Fisher of Fitchburg; C. F. Braffett, E. F. Simonds and A. T. Simonds, vice-presidents; C. R. Hubbell, superintendent; W. L. Taylor, traffic manager, and R. H. Newman, salesman of the Chicago branch; L. A. Kimball, manager, and E. Clark Evans, salesman, of the Portland and Seattle branches; G. K. Smith, manager, and L. E. Bowman, salesman, of the New Orleans branch, and F. C. Johnson, manager of the Simonds Saw Company, San Francisco.

A GOOD OPPORTUNITY.

The attention of Hardware manufacturers is called to the fact that Charles Weiland, 147 and 149 Chambers Street, New York, is in the market for anything in the way of "Seconds" or "discarded goods;" and an offer of the same, accompanied by sample, and memorandum of quantities, will receive his prompt attention. There is no better way of cleaning out a line of goods which it is undesirable to continue making, than by doing what is suggested above.

ATHOL MACHINE COMPANY.

The control of the Athol Machine Company, Athol, Mass., has been purchased by interests identical with the L. S. Starrett Company of that town. The two companies will not be merged, the corporate existence of the Athol Machine Company being retained and the two establishments conducted under distinct managements. The new owners of the stock are L. S. Starrett, F. A. Ball, F. E. Wing, W. G. Nims and N. B. Waterman, all associated with the Starrett Company. The new officers of the Athol Company are: President, F. A. Ball; vice-president and treasurer, L. S. Starrett; clerk, F. E. Wing. The Athol Machine Company changed ownership a few years ago, when Stephen H. Bellows sold his holdings of stock to S. E. French, F. S. Ewing and D. T. Bates, all of Orange, Mass. Mr. Ewing will retire from the business. Mr. French will be the superintendent. The company conducts a general foundry business, and manufactures vises and meat choppers and a line of mechanic's tools. All these lines will be continued.

NEW ENGLAND HARDWARE DEALERS' ASSOCIATION.

An enthusiastic meeting of the Executive Committee of the New England Hardware Dealers' Association was held in the Committee Rooms of the Boston Merchants' Association at 2 p. m., December 5, President Hunter presiding.

After an encouraging report by Secretary Chandler, Treasurer Sanders reported a balance of $258.00 on hand and all bills paid.

Advance plans for the Annual Convention were laid, and March 1 and 2, 1906, will be the dates, and Hotel Vendome, Boston, the headquarters.

Increased membership enlivened the interest with real issues, and interested trade friends point to the great success of the meetings.

President Bogardus and Secretary Corey, of the National Retail Hardware Association, will be present.

The convention will include business meetings, trade discussions, question box and such diversions as theatre party one evening and a "ladies' night banquet" another.

All in all, the affair is to be the "greatest ever" in New England on occasion of the first visit of National officers.

THE T. B. RAYL CO.'S 30TH ANNIVERSARY.

The T. B. Rayl Co., of Detroit, Mich., celebrated their 30th anniversary on the 2d of October, last. T. B. Rayl and Dudley W. Smith went from Wooster, Ohio, to Detroit in 1875 and bought out the Hardware firm of Arthur Glover, and they enjoyed the distinction of having occupied the same location with the same partners and the same name for thirty years. In 1894 they were incorporated and added Alexander Paton to the company. If not the first, they were one of the first firms in the west to publish a catalogue of tools and their business in this line extends all over the United States, with occasional orders from foreign countries. They publish two distinct catalogues, one of woodworkers' tools and one of Machinists' Tools and Factory supplies. The anniversary was a very pleasant occasion commencing with a supper to the employees and ending with a theatre party. Fifty-six sat down to supper and speeches were made by the members of the firm and those of the employees who had been with them from ten to twenty-five years. A handsome silver loving cup was presented to Mr. Rayl and to Mr. Smith and a gold headed cane to Mr. Paton.

WINNING SEVERAL TROPHIES.

The Urbana Ohio Gun Club was successful in landing both the team and individual trophies which have been contested for during the several months past by the gun clubs of Springfield, St. Paris, Urbana and nearby points. The final shoot was held at St. Paris on Nov. 1st, the Urbana team winning the Peters cup with a score of 210, and E. W. Holding, of Urbana, won the individual trophy with a score of 49 out of 50.

The Woodward trophy contested for during the past season by the members of the Sandusky Ohio Gun Club, was finally won by John Deist, who thus establishes his claim to the championship of the club. Many of Mr. Deist's highest and most regular scores were made with Peters factory loads.

At Boundbrook, N. J., Nov. 16th, the New Jersey Individual State Championship was won by F. C. Bissett, and the first and second amateur averages for the day's program were won by E. F. Markley and J. Pleiss, all using Peters Ideal factory loaded shells.

DECEMBER 10, 1905

Editorial Trade Review

Holiday goods just now have the call, and take precedence wherever provision has been made for their encouragement, which is everywhere in evidence. This has been such magnificent Fall weather, which has been so warm by comparison with the ushering in of previous Winters, that skates and sleds and similar goods have held off in a hesitating way; but as twenty-four hours frequently brings the severest change in Winter weather, there is still ample room for us to be surprised previous to Christmas, in which case the stock of these goods, which are those most sanguinely put in stock, for Winter holiday demands, will melt away, figuratively speaking, and prove the best of sellers. All other kinds of holiday goods are making great headway. There is a definite and solid enquiry for Plated goods, fine cutlery and razors, and household conveniences of every kind that will surprise the housewife by an unexpected purchase, are in great demand and meet with urgent sales.

November business has proved to be of greater volume than ever, surpassing that of a year ago; the future has a very satisfactory outlook, viewed from every standpoint. The advances on goods have on the average been so extremely moderate that one need not manifest surprise if higher prices still will be noted by the trade for Spring sales. There are few goods but what can be bought more favorably at the present time than at a period more remote, and it behooves the dealer at the present time to study the figures that govern the market, and make his calculations accordingly.

The retailers are purchasing goods quite freely, no doubt with the feeling that any excess they might purchase they would have no fear would prove a burden to carry, as the probable advance would pay the interest. The Jobbers find that it is extremely difficult to obtain goods from the manufacturers, whose orders have been so unusually heavy and full, that the dealer has no such fear of overstock, a feeling that is constantly made prominent at this season of the year, from force of habit in arranging for the inventory.

The sales for December, it is made evident, will reach a record amount, as the feeling of confidence regarding the future, and the large addition to the sales made by holiday goods bid fair to make this one of the best months in which to round out a year's sales and count largely in the survey.

In regard to prices, the trend is towards higher prices, but the buyer of regular stock is ordering usual assortments for the current season. The customary Winter stock is not over-estimated by the dealer, who buys confidently what his stock requires.

The months succeeding January are usually dull ones and trade will assume its customary regularity. In January and February the many retail associations will hold their Conventions and the attention of the dealers will be given to the sundry questions of interest that may be brought before them, preparations for which have already been made, and the new impetus given by the Associated Granges, who manifest so strong a desire to establish the Parcels Post, may make it incumbent on the retailers to do more than make a simple objection.

The conditions for a continuance of prosperity during the next six months, and perhaps the entire year, are of the most flattering kind, being all favorable for a good Spring trade, which most of the manufacturers have already made preparations for by adding to their present facilities wherever they have been found deficient. Heavy Hardware has become more steady in its conditions, and, although manufacturers are very much behind their orders taken at present figures, a more conservative state of affairs will soon be noted.

Everything under way is liberally designed, and the improvements contemplated impress one, whether they are among those of the Railroads, with their new equipment in new cars, and especially those for freight, which run into the thousands, or real estate owners, whose willingness to improve so greatly while present prices prevail, show an unbounded confidence in the future that is the subject for admiration.

The trade will soon be busy with their inventories and the hope is expressed that they will be found showing the good trade of the year has not proved unprofitable. Dealers look forward with a great deal of confidence to this last scene of all, in which the eventful history of a good year's activity brings its deserved rewards. Competition may have been brisk, although "price cutting" was not remarkable, and profits on some things closer than ordinary, but, on the whole, we fancy dealers will find it to have been a memorable year.

THE ADVERTISING MANUFACTURER.

One way by which the retailer can fight the catalogue house is by giving hearty support to the manufacturer who thinks enough of his goods to advertise them liberally. It is through advertising in various forms that the catalogue houses have obtained their hold on the public. Against this the retailer can only compete in a limited way, but when a manufacturer seeks to create a demand for his goods by liberally advertising in behalf of the retail dealer, the latter loses a golden opportunity if he not only does not keep the goods in stock but fails to make good use of them to broaden the influence of his establishment.

No one ever enters a store without unconsciously or otherwise noticing some other article in that store. It is up to the retailer to make the impression a lasting one so far as the store is concerned, but let him not forget to do full justice to the interests of the manufacturer whose advertising brought the customer. The results of such support are not only direct through immediate sales, but other manufacturers will thereby be encouraged to do likewise. There is a lot of real business success possible in the aiding of your own real business friends and supporters, the advertising manufacturer.

PROFIT MAKING LINES

THE ZINN AUTOMATIC RAZOR.

Among razors and shaving devices which have been put on the market within a comparatively short time, none has created as much stir in the shaving world as the Zinn Automatic Razor.

Tempered by electricity, its sheet steel blades are so hard they will cut glass. They are ground and honed to so fine, smooth and so perfect a cutting edge that no matter how tough the beard or how tender the face the Zinn Automatic Razor is equal to the

task. Again, it is this new but secret process of tempering, known only to the manufacturers of this wonderful "Little Barber," which permits each blade to be used from six to twelve times, and, as twenty-four blades go with every Zinn, honing or stropping of these blades is entirely needless. There is not the

least doubt that safety razors to-day are more extensively advertised than any article selling for about the same money, and for the short time the Zinn Automatic Razor has been on the market, it certainly has had its share of publicity in all the leading popular magazines. It is not advertising alone, however, which has attended the entrance of "The Little Barber"—the Zinn Automatic Razor—into the shaving world with such phenomenal success in its sale all over the United States, Canada and Mexico. Its success has been due to the intrinsic merit of the razor itself. It has been due to its tiny, electrically tempered blade, two hundred of which, if placed side by side, are only an inch in thickness! However, its success is attributable to the fact that men are being educated, through advertising, that they can get more comfort at less expense from the use of a safety razor. That the maximum of comfort at a minimum expense can be gained from the use of the Zinn Automatic Razor, thousands of pleased customers have discovered. Of course, their complete

satisfaction, expressed to fellow-shavers, has greatly enhanced the reputation of the Zinn. It is packed in a handsome case,

compact and handy, as shown herewith. The sheet steel razor is here to stay because it has staying qualities. It is manufactured by the Gem Cutlery Company, 34 Reade Street, New York, manufacturers of the celebrated Gem Safety Razor.

THE DISAPPOINTMENTS IN TRADE.

After being attracted to a certain Hardware store because of the catchy advertisement of cutlery, which was splendidly gotten up, well displayed and located next to the reading matter at top of column. It was an advertisement one could not help but see, and reading it, would at once have the desire to go and see the goods advertised. Upon entering the store the customer, himself one of three customers, waiting for a clerk to get ready to show us goods. Two clerks there were in the store and another man (probably the proprietor). One of these clerks was, in a half hearted way waiting on a customer, the other clerk was opening a case of goods in the rear, the third, who seemed to be the owner of the store, was sitting at a desk perhaps writing advertisements. Both he and the one opening the box were too busy to show us the goods. One of the customers left the store saying he could wait no longer. The other one was so cross when the clerk finally got ready to wait on him, that he would not have bought gold dollars at 50 cents.

Now this incident illustrates the almost uselessness of spending good money in advertising unless a merchant pays proper attention to his customers when they come into the store. Advertising only pays when properly followed up by good store methods.

Another error merchants are inclined to make is that of over stating the goods in an advertisement. An advertisement should be so attractive that it will create a desire for the article advertised, but it should not overstate the value or in anyway misrepresent it. To be drawn to a store by clever advertising and then be treated with discourtesy will disgust a customer almost as much as the still poorer business of misrepresentation in an advertisement.

GRANGE ACTIVITY.

On the eve of going to press with this issue of HARDWARE we have received the folowing letter and enclosure, which we present herewith:

KNOXVILLE, TENN., Nov. 29, 1905.

To the Members of the Southern Hardware Jobbers' Association:

GENTLEMEN.—We quote below, an article which appeared in the *North American*, Philadelphia, Friday, Nov. 24, in regard to action taken by the National Grange on the subject of Parcels Post during their convention at Atlantic City, which has been in session for the past two weeks. The National Grange is a very strong organization of farmers and naturally wields an immense power in any work they undertake. It is universally conceded by jobbers and retailers that the enactment of the Parcels Post law will mean a vast curtailment of the jobbing and retail business. In fact it threatens the annihilation of the retailer dealers, especially those located in the agricultural sections. This of necessity would result disastrously to the jobbing interests. It therefore behooves us as jobbers to exert every possible effort to defeat the Parcels Post Bill, and we ask that you take advantage of any opportunity—in fact seek opportunities—to lay before and impress upon yaur members of Congress the demoralization and injury which would result from the enactment of the proposed Parcels Post. Instead of securing the adoption of this measure, urge upon them the importance and benefits to be derived from One Cent Letter Postage law, as the enactment of one of these measures means the defeat of the other, and surely you need no arguments to convince you of the importance of one cent postage proposition.

Yours very truly.

By C. B. CARTER...
Sec'y-Treas.

GRANGERS TO SPEND $10,000 IN FIGHT FOR PARCELS POST.

Appropriation Made by Convention to Boom Scheme.

TO UNMASK FOES.

Committee Will Push Campaign Before Next Congress.

Atlantic City, N. J., Nov. 23rd, 1905.—An appropriation of $10,000 to be used as an educational fund for dissemination of grange policies was made at the closing session of the National Grange to-day.

This means that a determined, aggressive campaign for a government parcels post will be commenced immediately.

"Establishment of parcels post, to my mind," said the newly elected master of the National Grange, former Governor Nahum J. Bachelder, of New Hampshire, "is the issue that must be pushed. Every granger in the United States, within the coming year will be asked to demand from their Senators and Representatives in Congress a pledge they will support a parcels post bill.

TO UNMASK OPPOSITION.

"The Legislative Committee of the National Grange will watch the bill closely, and no efforts will be spared to unmask all the forms of opposition to this measure."

Strong utterances were made by the Committee on Resolutions in support of President Roosevelt's "square deal" policy and upon the labor question. These utterances follow:

In these days of higher civilization and a larger degree of prosperity, when so many are demanding special rights for themselves to the injury of the many, we, as an order, "without party affiliations," stand by the Administration in its earnest and consistant demands that every American citizen shall have if he wills, an opportunity to work for reasonable compensation; that no combine, corporate or organized company, shall have full power to crush the more humble individual, but that every man shall have a "square deal"; therefore,

INDORSE ROOSEVELT SQUARE DEAL.

Resolved, That we, the National Grange of the Patrons of Husbandry, do most heartily support the people's President, Theodore Roosevelt, in his demand that those in places of responsibility, whether employed by the government, corporation, company or individual, shall be held accountable both to the laws of his country and the people they serve; therefore;

Resolved, The we, as American citizens, believe it is every man's privilege to work as many hours as he wills for pay; that energy, thrift and activity are entitled to encouragement and should command rightful compensation for services rendered.

The Committee on Foreign Relations, through its chairman, W. F. Hill, of Pennsylvania, presented their admirable report, the feature of which was its advocacy of the International Institute of Science and a participation by the United States in the work of such institute.

Mr. Hill also introduced a resolution favoring the grant to trolley companies in all the States of the right to carry freight, and opposing the ownership by steam railroad corporations of electric roads which parallel their lines.

Installation of the officers elected yesterday was conducted in an impressive manner by H. O. Hadley, master of the New Hampshire State Grange.

Aaron Jones, the retiring master of the National Grange, in a farewell address, told how the grange has increased 78 per cent. in his eight years' occupancy of that office. He twice refused nomination for Congress in the Indiana district, where nomination was equivalent to election.

At the conclusion of his address George W. F. Gaunt, of New Jersey, the newly elected National Lecturer, in the name of the grange, presented to Mr. and Mrs. Jones a beautiful silver service.

Governor Bachelder made an eloquent address on assuming the office of master.

E. B. Norris, of New York, Master Bachelder and Past Master Jones were named on the Legislative Committee that will watch Grange interests in Washington during the session of Congress.

Colorado won out against Connecticut in the contest for the next convention. The Colorado delegates say Denver will be the convention city.

All the grangers are enthusiastic over their treatment in Atlantic City. They declare that the convention was the most fruitful and was held in the most pleasant environment in the history of the grange.

NO LIMIT TO WORKING DAY.

Before adjourning this evening the grange adopted a resolution declaring "That we, as American citizens, believe it is every man's privilege to work as many hours as he wills for pay, that energy, thrift and activity are entitled to encouragement and should command rightful compensation for services rendered."

Another resolution adopted provides that "When a granger is found to be dealing in liquor or conducting a saloon he shall be dropped from the roll without notice."

WHAT CONSTITUTES A HARDWARE STORE?

One who claimed to be a "well posted" Hardwareman, writing in a recent number of a Hardware trade publication, very severely criticized the growing tendency on the part of the up-to-date Hardware dealer to broaden and expand his business by adding side and outside lines. The trend of his argument against all expansion in this direction was that few Hardware stores carried a complete stock of Hardware. Let the Hardwareman first have a store where everything in Hardware can be found; then let him talk about other lines of merchandise. Such was the standpoint of this writer, "who had come in close touch with many Hardware dealers in many parts of the United States and found few stores with a complete Hardware stock." Why tell the dealer about these side lines—calling his attention to the paint and painters' supplies trade; to sewing machines; telling him about sporting goods; showing him how a good business may be built up in silverware and Christmas goods? Why continually advising and constantly urging the dealer to put in other goods, when his stock of regular Hardware is not complete? Why not rather push the dealer to carry a better, more complete stock of Hardware?

That was a position taken by this "well posted" Hardwareman, who rigidly maintained that if the dealer would concentrate in this way his efforts more closely on Hardware, his would be more truly a Hardware store and his business thus concentrated would also be more profitable.

Now, in the first place, it's perfectly plain that it would be well nigh impossible for any merchant, outside of the very largest centres, ever to be able to carry a complete Hardware stock; even to have everything in the line that might occasionally be asked for. The attempt to have such a store would necessitate a very large capital, and the carrying out of such an idea would at once create a large amount of almost "dead" stock.

Then, too, there is much in the regular Hardware line that is sold on a very close margin, and, after taking out the cost of doing business, is actually handled at a loss. The wise dealer is he who is endeavoring to eliminate as much as possible such goods—where it's not absolutely necessary to carry them. All business is gradually being done on a closer margin. It is, therefore, of great importance to increase the volume of trade—and to do it with profitable goods—there it is that the wide-awake merchant is ever on the lookout for any lines of merchandise that will fit well in his stock and find a ready sale. If certain goods are not profitable and are not business bringers they should be supplanted into other and more profitable lines. This it is that the various trade publications are urging the Hardware merchant to take up the sale of much in merchandise that may not be Hardware, but that will find a ready place in the store, and thus it is that many thoughtful Hardwaremen are doing it and making their business more profitable, and, in many cases, more pleasant to handle. HAMMERNAIL.

DON'T WORRY.

"I'm afraid I may have to go to jail," wailed the prominent packer.

"Why so? asked the sapient senator.

"I've been indicted."

"Pooh! Look at me. I've been convicted."

SEWING MACHINES AND HARDWARE DEALERS, No. 6

I have reserved until the last, one of the most important announcements of all and I feel very sure that the Hardware trade will thoroughly appreciate the advantages and possibilities of this idea and in the hope that it will have a beneficial influence in helping them build up their business, I give the plan of meeting and overcoming catalogue house competition in minute details.

The matter of catalogue house competition and how to best overcome the same can best be told by relating an experience that came under my personal observation while traveling in Northwestern Wisconsin, over a year or so ago.

In this territory, bordering on the banks of the Mississippi River, Chicago catalogue houses were particularly active and aggressive. I was sent over the territory to find out the actual conditions and how best to overcome same. The catalogue houses had put out an alluring bait by offering a five drawer drophead sewing machine at $8.95 and so eager were they to get their catalogues in active circulation, that they were paying fifty cents and freight on every catalogue that was delivered to a resident farmer that had money—more or less—and which he was not afraid to send away to some distant mail order house for some article which he saw listed in the catalogue at what he considered a bargain price.

How well I remember the plans I made and what arguments I could best advance to keep our dealers in line and at the same time hold up and increase the volume of my trade. It was a cold, raw, blustering morning when my train pulled up at the Station of ———, a town of three thousand, situated not so many miles away from the Mississippi and made my way to the Hotel and thence to the dealer's store. It was with much relief that I found the trade had already solved the catalogue house problem and the key to the whole situation was to fight the catalogue houses with their own goods and with their own medicine.

My dealer grew very enthusiastic as he told me how he had his rural friend John send to the catalogue house for one of their $8.95 machines and how, after its receipt, he placed an ad in his local paper and mailed circulars to the farmers throughout his County advertising the machine at twenty-five cents less than the catalogue house asked for it.

"Now," he said, after showing me his ad and printed matter, "I keep one of these machines on hand constantly and I tell my customers if they want a machine of this caliber, I will deliver it to their homes at twenty-five cents less than they can buy it from the catalogue house and I also make it very strong to them that if at any time within four or five weeks, they are in any way dissatisfied with the machine, they are at perfect liberty to return it and I will allow them exactly what they paid for it on the purchase price of one of my regular machines."

Some months later, I had occasion to visit ——— again, and called on my old friend and asked how his plan of bucking the catalogue houses worked out, although I knew by the number of repeat orders he had sent in that the plan must have been a success. "Why," he said, "do you know, those circulars I mailed out are working yet. Every day or so, a farmer will come in and ask to see that $8.95 machine. I treat him very nicely but before showing him that cheap machine, I give him a good strong talk and show up my own machines and then wind up by comparing my machine with the catalogue house machine and I haven't failed yet to sell my machine, in a single instance. Why," he continued, "if every dealer in the land or even a goodly portion of them would take up and follow this plan, the catalogue houses would soon have to find some other bait than low prices to catch the farmers with. Of course," he went on, "it takes a little effort and some time and money to carry out this plan, but I have got it all back and more and I have sold more of my better grade of sewing machines this season than ever before and best of all, I have practically wiped out the catalogue house competition of this Section."

This plan is unquestionably a good one and with certain modifications could, I believe, be worked to good and profitable advantage to every up-to-date dealer.

I would suggest that the dealer follow up his newspaper advertising by mailing out circulars or dodgers of the ad to every farmer in his County. Then follow it up with another circular letter, say a week or ten days after the dodger has been mailed. In other words, let your trade know just what you propose to do and after you get the people into your store, you will find it a comparatively easy matter to swing them over to purchasing your better and higher grade sewing machines.

If a proposition has life in it, and this one certainly has, the thing to do is to get it before as many people as possible, as quickly as possible and as cheaply as possible. That is the long and short of the follow up circular letter in a nut shell and I believe that the dealer who tries this plan will derive the best and most profitable results if carefully followed up with a series of follow up letters.

The first mission of a circular letter, in fact, of any letter, is to be seen. Notice, I say it is only the first mission. It is not the greatest. The greatest mission is to convince. Before any letter can convince or convey any message whatever, it must be seen by the reader for whom it is intended. Every letter of a series of circular letters should be a part of a long connected story. This story is the story of your goods. It should tell in the long run, just why your customers should buy your sewing machines—just what particular advantage they have that other machines do not have—what the prices are where prices can be quoted to advantage and the various things about your way of doing business which will appeal to them or convince them.

In the circular letter, more attractive than fine pictures, more potent than fine language alone, are the *why* and *wherefore* of the Goods—the Reasons. All letter argument is simply the setting forth of two main reasons—reasons why the reader ought to buy—reasons why the seller sells. The buying reason is grounded deep in human nature. Readers are not content to be told that your sewing machine is high grade and is to be sold at a popular price. First, Human Nature wants to know the price. Then it wants to know whether the machine sews—how it sews—how long it will sew, and what you propose to do about it if it stops sewing within five or ten years. When Human Nature has all this evidence, it can come very close to knowing whether it is worth while to consider buying your sewing machine or not.

From this you will note that the circular letter is really a secondary salesman. In other words, it is expected to go out and tell the story of your business to customers; to give descriptions; to quote prices, and, to get orders. I believe it will do all this, if it is properly constructed, but, in order to do it, it must consist of something more than a mere mass of descriptions and prices. It must embrace good, sensible reasons as to why the sewing machine described should be purchased instead of another make. It must try to point out the advantages of your sewing machine and show just where it is to the interest of your customer to purchase your sewing machine. It should demonstrate to your customer the advantage of buying your machine over any other.

There are a few things that the circular letter can't do, no matter how good it may be or how wisely placed. First, it can't restore health and strength to a broken down business that is drawing its last breath and hasn't enough vitality to take any nourishment. Second, it can't sell enough of a poor article to make it profitable in the long run. Third, it can't sell very much of a good thing if an equally good and well advertised thing is sold at a lower price.

And it can't do the most good anyhow, unless it is pretty good itself—unless there is real thought and method in it—business argument—interesting details—reasons—facts. On the other hand, there are a few things that a circular can do and will do—that it is doing right along. Circular letters of the right sort will help any legitimate business under Heaven that deserves help. Backed up by the right goods and prices, it will do more to build up a business than any other one force known to the business world. Under its influence, a small business will grow in that easy, continuous way that pays after spurts and booms are dead and forgotten. It widens and extends the big business along safe, sure lines. It will pull many a business man out of the hole when it's a matter of finding a wider market for a good thing and finding it promptly.

All this, the wise use of the circular letter has done, is doing and will do and if the dealer will use it wisely or use it in a sewing machine follow up campaign as above indicated, the results will be more than gratifying and he will have the satisfaction of keeping in close touch with his customers and the chances are big, if your customers have any idea of sending to the catalogue houses for any article they see advertised, they will first consult you, and then, with proper salesmanship on the dealers' part, the balance is easy.

Legal Matters

OF INTEREST TO HARDWAREMEN

INSURANCE—CUSTOMER'S INTEREST—POLICY.

The Supreme Court of Wisconsin held, in the case of Johnson vs. Abresch, that a carriage maker having in his possession a carriage belonging to a customer for repair and sale on the customer's account had a right to insure the customer's interest therein by a policy taken in his own name.

CARRIER—BILL OF LADING—SALE.

The Supreme Court of Rhode Island held, in the case of Vaughn vs. New York, New Haven & Hartford Railroad Company, that where a bill of lading was sent by the seller through a bank accompanied by a draft upon the buyer, who was obliged to pay the draft and obtain the bill of lading before he could secure the goods, title to the goods did not pass to the buyer until he paid the draft and obtained the bill of lading, and that if the goods were destroyed before that time he could not by afterward paying the draft and taking up the bill of lading obtain a title which would relate back so as to authorize him to sue for the destruction of the goods. The court further held that where a carrier permitted the consignee of merchandise to open the cars containing the same after they have been placed on a spur track near the consignee's warehouse, and to remove part of the contents thereof and exercise dominion over the same, and put his own locks on the cars, the carrier's liability as such for the merchandise had accepted a delivery thereof and sold and removed some of it, the fact that such merchandise still remained in the carrier's cars for the convenience of the consignee did not impose any liability as warehouseman on the carrier.

HOMESTEAD—ADMINISTRATOR'S SALE.

The Supreme Court of Nebraska held, in the case of Bradford vs. Jensen, that a homestead of less value than $2,000 could not be disposed of at administrator's sale, either for the discharge of encumbrances thereon or for the payment of debts against the estate of the decedent, and that a license granted by the district court purporting to authorize such a sale was absolutely void.

INSURANCE—ACCIDENT—NOTICE—WAIVER.

The Supreme Court of Indiana held, in the recent case of The Aetna Life Insurance Company vs. Fitzgerald, that an accident policy insuring against "bodily injuries effected through external violent and accidental means" covered an injury caused by the injured lying upon his hand against the bedrail when asleep; that a provision in such a policy "against loss of business time" from such injuries covered loss of time from disease of the bones of the hand resulting from an injury as above stated; that a provision in the policy requiring "immediate notice" of injury amounted merely to a requirement for notice within a reasonable time, and that an instruction that if notice was not given within a reasonable time the failure of the company to object to a subsequent notice for that reason, but only by denying liability solely on another ground, was a waiver of the provisions requiring immediate notice, was erroneous.

RELATIVE TO FIXED RETAIL PRICES ON BISSELL "CYCO" BEARING SWEEPERS.

The Bissell Carpet Sweeper Co., Grand Rapids and 25 Warren St., New York, who have, both in this country and abroad, been strenuously insisting for several years upon conditions that ensure for the dealers "Price Maintenance"; have recently distributed the following letter to their trade, to more fully complete what is so well begun, and which received the high commendation of approval at the conventions of the trade recently held in Washington.

TO OUR CUSTOMERS:

One of the distinguishing features of Bissell's "Cyco" Bearing sweepers, is that they have always been sold at fixed retail prices that have insured to the dealer a good profit, and every dealer handling our goods rests secure in the belief that his neighbor is not underselling him. That fixed retail prices commend the Bissell sweeper to the trade generally, is attested to by the commanding position our goods have attained, and it is a great pleasure for us to be able to state that among 20,000 customers of our books, not 1% are disposed to cut our prices. Whenever a cut does occur, it is either due to a mistake on the part of the dealer, or otherwise because of a misapprehension as to our right to fix the price on our commodity.

For the enlightenment of our customers on this point, and for those who may feel that once they buy an article, they can sell it at any price they choose, we beg to explain that recent decisions both in English and United States courts fully sustain the manufacturer of a patented article, to fix the price on his commodity. We want our customers to feel that in fixing the retail prices on Bissell's Cyco Bearing sweepers we are protecting their interests as much as our own, and that we are, through our price maintenance policy, practically guaranteeing good profits to every handler of Bissell sweepers. If any dealer will report to us a case of price cutting on Bissell's "Cyco" Bearing sweepers, we will see that it is promptly corrected. Pasters similar to sample enclosed are attached to every invoice of Bissell's "Cyco" Bearing sweepers showing the retail prices we fix on these machines.

We shall esteem it a favor if you will give us the name of any dealer who may be cutting our prices, sending us a clipping showing his ad. when we will follow the matter up promptly not mentioning your name in any way.

This letter is intended as a formal notice to all our customers, that the retail prices on Bissell's "Cyco" Bearing sweepers are fixed for every reason herein presented, should be maintained.

Trusting that our price maintenance policy meets with your approval, and that we will have your hearty co-operation in the carrying out of same, we remain,

Yours truly,
BISSELL CARPET SWEEPER CO.
Robt. E. Shanahan,
Sec'y & Gen'l M'g'r.

ARBITRATION COMMITTEE OF THE NEW YORK CREDIT MEN'S ASSOCIATION.

Howard Marshall, Chairman, Joseph Wild & Co.
D. A. Austin,.....Henry Nestle
A. C. Brew,.....Faulkner, Page & Co.
I. E. Edgar.....Garfield National Bank.
W. A. Jones,.....American Linseed Co.

In the general conduct of business, disputes between debtor and creditor are of increasing frequency; and the just and equitable settlement of differences and controversies which arise from time to time is often impossible, except as the result of protracted litigation, expense and delay; involving also the termination of business relations between the parties at interest. The New York Credit Men's Association has therefore instituted an "Arbitration Bureau" to which all members may refer for determination such questions of dispute and difference.

This committee will be prepared at all times to hear any case brought before it for determination, and will undertake to render a decision which will be impartial and without prejudice, and as promptly as the merits of the case will permit. It is empowered to call upon any member or members who may be best qualified to pass upon the questions at issue by reason of particular knowledge or experience, expert or otherwise, as sitting members of the Committee and all proceedings will be conducted upon well established and recognized principles of sound business.

METHOD OF ARBITRATION.

Two members, or a member and a non-member, having a dispute or disagreement to adjust, and who desire action thereon by this Committee, will mutually sign an appeal to the Committee, and address it to the Secretary of the New York Credit Men's Association, 320 Broadway, New York City. Proceedings will at once be put in operation, and the Secretary will appoint a day and hour, convenient to all parties, upon which to meet and present the facts. Due consideration will be given to the merits of both sides of the question at issue, and an early decision will be rendered.

It is to be understood that a case presented to this Committee for consideration will be closed finally and amicably when the decision is rendered, and that both parties will abide by such action.

It will be the desire of this Committee to amicably adjust all controversies committed to it for decision, and the Committee expresses the hope that as a result of its labors the relationship between the parties at interest will be preserved in friendship and a continuance of business.

As probably there will be no expense incurred by any of the parties to a dispute, it is expected our members will take advantage of the good offices of this Committee, and thereby preserve their business friendships and avoid the worries, delays and expenses of litigation.

THE ATWATER MFG. CO., Southington, Conn., have sent us their Standard Revised List Prices on Clips, Couplings, King Bolts and Body Loops as adopted by all manufacturers. The pamphlet will be found very handy and useful as the lists have been very carefully prepared, and cuts are given showing to advantage the good qualities of the Company's products, all of which they claim are made of the very best material. They request that when ordering parties refer to this leaflet, a copy of which will be promptly sent upon request.

CATALOGUE HOUSE COMPETITION.

With a copy of the treatise in question, which was issued under the auspices of the Wholesale Hardware Joint Committee, and is a very valuable pamphlet which should be read and thought over by every member of the Association; we have received the following from the Sub-Committee, which has been sent to each member for his information:

"The deep interest which has so far been manifested by Manufacturers, Jobbers and Retailers on the subject of Catalogue House Competition, indicates its importance. If this method of doing business was not injurious to both the Jobber and Retailer, it would not have been given so much publicity. We find a very large proportion of the Retailers do not appreciate the very demoralizing influence of Catalogue House Competition, and looking toward the proper enlightenment of the Retail dealers as to the deep and far reaching injury which will result to them by further encroachments of the Catalogue Houses upon the dealers' business, a sub-committee of the Wholesale and Retail Hardware Joint Committee has been appointed consisting of the undersigned whose purpose is to thoroughly agitate this subject among the Southern Retail Hardware Dealers. We have prepared a very comprehensive treatise on Catalogue House Competition, setting forth ways and means to combat this evil. This is a very valuable publication and we are anxious to place a copy in the hand of every retail dealer in the South. Copies will be promptly forwarded upon application to any of the undersigned."

C. B. CARTER, Knoxville, Tenn.
M. L. COREY, Argos, Ind.
R. M. DUDLEY, Nashville, Tenn.

THE USE AND ABUSE OF CREDIT.

Every fall those engaged in the lines of trade to which we give our attention experience a considerable rush in business. It is fortunate for some and unfortunate for others that credit is extended to them by the wholesale houses, so that they are enabled to conduct their business at such times with limited capital. Credit is based on confidence and all know the dangers into which the overconfident fall. Those who extend credit too freely on this basis often lose their goods; those who draw overconfidently on credit often give their customers credit where they would not be so tempted if credit had not in turn been extended to them. Men who have not given the attention to bookkeeping details which a successful business requires are liable to be overtaken by the troubles accompanying too generous credit. Because they are conducting a brisk trade and are closely confined to the mechanical work or because they have for years been eminently successful is no good reason for granting credit without the sanction which properly kept accounts should give practically at a glance.

All wholesale houses have a man who gives critical attention to the credit extended to their customers. The most careful credit man who keeps in close touch with the accounts of his customers and the reports of his salesmen cannot always understand when to extend a little more credit and when it is desirable to reduce the credit already enjoyed by a customer. If he could many of the troubles of the business man could be avoided. It is not infrequent that these credit men are sharply criticised when they refuse to continue the credit. Their action is induced many times when their favors seem unappreciated and when it is desired to teach an important lesson from the temporary hardship which it incurs.

It is incumbent upon the honest business man who intends to pay every cent he owes to see that his credit is maintained with confidence by the regularity with which he meets his obligations. It is especially important when for any reason conditions arise making it impossible for him to meet the bill when its payment is due that he should inform the house of his inability and explain the cause. In most instances this will secure the extension of credit necessary. The failure to make the explanation and the failure to pay leave those who favor him with but one conclusion, and that is, that he is indifferent to past favors which have been granted. This is at once an undermining of the confidence on which credit is established. Too many tradesmen act as if they felt that the obligation was all on the other side, and do not seem to realize that it is their duty to keep those favoring them informed of the little financial difficulties which interfere with the prompt settlement of bills. A tradesman who keeps his friends thus informed will often receive advice and assistance that will be invaluable, and if his reasons are good will never fail to obtain that extension of credit to tide him over his temporary troubles. It is incumbent on the man who accepts credit to regard it in the same light as he would one of his promissory notes. He must make arrangements to meet its obligations. If all tradesmen would maintain this view of credit they would not accept too much and would escape many of the troubles, embarrassments and dangers that never trouble the cash buyers and would sooner be on the cash basis themselves, increasing their profits by discounting their bills.—*Metal Worker.*

PUTTING AMERICAN SPECIALTIES ON FOREIGN MARKETS.

Americans have mastered domestic trade, but most American manufacturers have little conception of foreign trade, and even less knowledge of the proper means to achieve it, says Paul T. Derrick in *American Industries.*

It must be admitted that the past enormous and rapid development of our domestic market has left us little time to study foreign trade conditions and to take advantage of opportunities which they may present to us. But this, while it explains the past, does not excuse the present lack of interest in the subject.

Our western frontier has been pushed all the way across the Continent, and with the occupation of our free lands we are entering upon a new trade epoch. Instead of new markets being created from wilderness within our own borders, trade, in the future, must look abroad for enlarged opportunity and domestic commerce must face increased competition.

Our government is wise in supplying an active consular service which is constantly accumulating facts of vital importance with reference to foreign markets. This information the government lavishly distributes, and much of value is thus brought to the attention of American manufacturers.

Boards of trade and various associations, through co-operative channels, also disseminate much information of value. All these, and other means, are excellent and certain to incite increased interest in foreign market opportunities and to assist greatly in arriving at correct conclusions.

There is, however, a deplorable lack of information of vital interest for American manufacturers engaged in the production of specialties intended for general consumption.

Marketing specialties for popular consumption requires, nowadays, both clever commercial organization and advertising methods. Means must be employed to create a demand for the goods. Economical, rapid distribution of them must be accomplished to insure the manufacture against loss from demand at unstocked points.

KINDS OF INFORMATION NEEDED.

When one considers the millions of dollars spent in advertising, and the absolute necessity for generous outlay of intelligent advertising in foreign countries to permit American manufacturers to open up such markets profitably, it seems highly proper to suggest, and for American manufacturers to insist, that the government shall include in its Consular Service reports as full information as can be secured, regarding the advertising possibilities and requirements of all important foreign markets.

I would suggest that the government should undertake to advise one how to go about advertising and marketing goods of this nature, but statistics should be gathered concerning available advertising media of all sorts; proportion of reading population to the whole; the purchasing power, based upon average wealth; the public readiness to adopt new ideas and fashions, if demonstrated to be of advantage; climatic conditions governing food and clothing requirements, and such other various matters of vital importance in the consideration of new and unknown markets.

There are many countries which offer splendid opportunities to manufacturers of specialties of infinite variety, but which are a sealed book to the American manufacturer solely because of his lack of experience outside of the home market.

The broader the foundation of American commerce, the larger and safer the superstructure of wealth which may be reared upon it. This will be especially realized in times of commercial depression and over production at home. "Hard times" are as certain to come as "good times." In periods of overproduction in the home market, the advantage of foreign outlet is easier to observe, but it is "flush times" at home that the American manufacturer should establish himself abroad, in order that easy, frictionless channels of foreign outlet be developed to supplement his profits in times of domestic trade depression.

Modern merchandizing includes advertising as certainly as it includes salesmanship. In fact, it is only a specialized form of salesmanship, based upon the knowledge that the *consumer* is the most vital element in the problem of selling. Retail trade is only a link in the endless chain which carries the manufacturer's product to the consumer. Upon the interest and good will of the consumer depends the success of every commercial interest. No undertaking will succeed without this, and none can fail with it. Therefore, advertising to create this interest and good will on the part of the consuming public, is absolutely essential to present-day success.

This fact is no more applicable to one country than to another. Methods for accomplishing it may differ—in fact, do differ, in a

Digitized by Google

varying degree—in all countries, and that is why the United States government should assist in bringing about a correct understanding of the best means for securing the necessary popular attention and esteem of American goods in foreign fields.

The future development of American commerce abroad will depend more and more upon manufactured goods. Our rapidly increasing population will come nearer and nearer to a total consumption of our raw products. There is, therefore, an increasing obligation for the government to lay before manufacturers such facts as will enable them to undertake foreign trade development with the least possible risk. Success abroad involves intelligent advertising to the consumer. Manufacturers should combine in urging the government to render them such assistance as is possible to arrive at a correct knowledge of the actual conditions surrounding the proper exploitation of their goods abroad.

The National Association of Manufacturers has done much along these lines. No other line of investigation and report can accomplish more permanent, practical good for its members in the future.

Not until one lives abroad can he fully appreciate the paucity of American manufactured goods in foreign shops. The reason for this, and the reason for the obliteration of the American flag upon the seaways of the world, no doubt lies in the enormous domestic market which has been developed because of our rapid spread of population and the marvelous uncovering of our natural resources.

With the occupation of our free lands we are now brought face to face with a readjustment of conditions. We must more and more create wealth, instead of finding it. Opportunity will be lessened. Domestic competition will grow yearly more exacting. Foreign trade opportunities will grow relatively more alluring. Those who first wake up to the value of present opportunities abroad will have the least difficulty in entrenching themselves in foreign markets. The late comer will find, when he finally puts in an appearance, that he will encounter not only native competition, which often is sleepy and obsolete in its methods, but also keen, established American competition. In other words, "first come, first served," and the man-behind-the-times will have to content himself with what is left.

Having thus stated the case broadly, from a purely international point of view, we may profitably pass to a brief consideration of the opportunities for American manufacturers in Great Britain and the British colonies.

The British public is soberminded and conservative. It will not swallow extravagant statements nor tolerate trifling. Its shillings are more carefully safeguarded from trickery and fraud than are our American dollars. But for these very reasons, response to legitimate trade effort and intelligent advertising is even greater than in the States. This is not a popular belief. The ultra conservatism of the Briton has been overexploited. Actual experience in introducing commodities of genuine merit and utility has proved this field of exceptional merit, if intelligently advertised.

A population of half that of America is packed into a small area, greatly simplifying and economizing both commercial and advertising effort.

Certainly no foreign market offers anything like so great an opportunity to so varied a list of American goods as does Great Britain.

When it is understood that the successful exploitation of goods on the British market also opens up trade in all British colonies as well, the importance of giving it most serious consideration will be appreciated.

ADVANTAGES IN THE ENGLISH MARKET.

Local effort in British colonies can also be conducted from London. Established here, American manufacturers will find, ready to hand, all the necessary trade and advertising machinery for energetically pushing their wares throughout the whole British Colonial system.

One particular advantage presented by this market over other markets abroad, especially to the American who never before tried his wings in foreign flight, is the fact that he is dealing with his own people. The same racial traits, the same climatic conditions, the same religion and literature and above all, the same language. Modifications of marks, labels, printed matter and advertising are less here than for any other market. Selling agencies and other trade arrangements are comparatively easy. The public is used to foreign-made goods. Discussion, for political effect, is sometimes indulged in to the theoretical advantage of "protected markets," but public opinion is for free trade. Mr. and Mrs. John Bull will buy to their best advantage, regardless of political opinion.

Splendid opportunities exist here for many American concerns, and for some they are better than at home; for others infinitely better than is found in America, outside the large cities.

The immense cultivation of American home market is frequently carried beyond the point of profit. It is much more sensible and business-like to scoop the cream from two continents, than to be content to restrain the skimmed milk of one. The future successful American manufacturer is he who, keenly alive to his opportunities at home, is intently studying foreign market conditions with a view of finding outlets of less resistance abroad. He will not allow prejudice to enter into his calculations, nor will he permit ignorance to cheat him out of his proper commercial place in the world. Where the trade is, there will he go. Where trade may be developed, there will he advertise. Seas and national boundaries will be no limit to his opportunity and success.

OBSTACLES TO TRADE.

BARRIERS CREATED BY AMERICAN MANUFACTURERS.

Consul Halstead, of Birmingham, furnishes a report in which he describes obstacles that are created by manufacturers and merchants in this country in efforts that are made by merchants in England to place orders. The consul's report is based on a statement made to him by a Birmingham merchant, who subsequently expressed his views in writing on this subject. The merchant declared that his firm had been recently trying to extend their operations in this country, and that overtures to that end had been met by many American manufacturers in a manner that was not at all encouraging, and in a few cases bordered on discourtesy. The firm, it is explained, has established satisfactory relations with a number of United States manufacturers, but when it is desired to take up a new article, difficulties are likely to arise. The consul quotes the Birmingham merchant as follows:

The vast majority do not seem to have any understanding for the exigencies of the export trade at all and seem particularly to be quite incapable of comprehending the terms which may be quite logical between two firms in the same city are unworkable under the altered circumstances. Either they refuse to do business at all or they present terms which are unacceptable. Some of them wish to attach sight draft to the bill of lading, which means a heavy loss in exchange, apart from the fact that we, in common with many firms of standing in this country, do not wish to have drafts levied on us at all. When it is a question of large sums and for transactions of metals, etc., this may pass, but for general lines of goods and smaller amounts it is quite out of the question. Other firms suggest cash with the order, which means that we should have to entrust them with cash two, three, or even four months before we get the invoice and documents for the goods. Yet again, others a trifle more accomodating, appear willing to accept our terms, but state that they will not allow the cash terms they give on the other side unless they receive payment within ten days of dispatch.

On the one hand we cannot afford to lose the 2 per cent for cash, but on the other hand it is impossible to comply with such a request, unless we keep funds lying idle in New York for the special purpose of paying our invoices there. Even if we did so, it would mean an extra commission besides the loss of a good deal of interest. When, however, firms have proved themselves reasonable enough to suggest the latter alternative they usually end by being amenable to argument, and, as a rule, after the exchange of a few letters to make them see that we are in earnest and will not do what they want, they give way. It is, however, a pity that there is so much correspondence necessary to obtain what ought to be granted without delay, and of course this attitude of the greater portion of the American manufacturers we have had to deal with does not make us eager to extend our relations with them, and is decidedly discouraging when compared with the replies we get to similar inquiries addressed to other foreign countries.

THE VALUE OF ANGER.

About the only value there is in getting angry comes to the man against whom the anger is directed and the benefit to him depends a good deal upon whether he keeps his own temper or not.

If there is any time in the world when a man hears the real truth about himself as he appears to others it is when some real angry man commences to abuse him. It may be an exaggerated truth he hears; no matter, if it strikes in enough for him to recognize his faults, trust him to tone it down all it needs. At the same time he is wise if he takes just enough notice of the utterances of an angry man to ask himself, "Is he telling me the truth about myself? How much of it is true?" Probably if we all saw our own faults and failings as the world sees them, there would be more New Year resolutions made (and broken) in the year 1906 than ever before.

A COMPLIMENT.

She—Ah! We can't tell what the future has in store for us!

Her Husband—Well, don't worry, dear! Whatever it is, you'll get it at a bargain.—*Puck*.

HARDWARE DEALERS OF UNKNOWN EUROPE

(Specially Contributed.)

American Hardware, according to our consul-general at Buda Pest, Mr. Chester, is rapidly making its advent in all forms over Hungary. This, and our sporting goods. Many of the American innovations, however, are rapidly underbid by the Germans as American exporters fail to register their trade-marks or patent the articles in Hungary, and hence the Germans can imitate, and do so, in a cheaper and better-selling medium. American razors and shaving guards, as well as American tennis-balls, are found in all large Hardware stores of the Magyar capital.

Rents are high for these stores in the city, a thousand dollars a year—equivalent to $5,000 with us—for a small one. Department stores, however, do not cut into the business, public sentiment standing out against them. Salesmen in the shops get all the way from twenty-four to sixty-four dollars the month

American stoves and American fountain-pens, as well as fly cages and stereoscope sand toy-flying machines and kodaks, are on the stock-list of every large Hardware merchant of the city, and occupy prominent places in his great windows, which, by the way, open street-ward, and so block traffic on the walk while being arranged. One Hardware store here sells American electrical novelties almost exclusively, the stock containing, among others, electrical candles and shaving sticks and flat irons, as well as ink-wells and gymnasium appliances, without the electricity. Cheaper wares are often exposed along the sidewalk before the stores, being taken in when the shutters are drawn, during the noon-hour, that all employees may eat at the same time.

Queer, round, brassy pencil-sharpeners, at eighteen cents, and nickel nippers and short-axes, such as all firemen carry in this city, are other staples of the trade. For the grocers, too, there are long narrow wooden tongs, selling for a dime and employed as pickle lifters.

Out at the great storage plant, on the out-skirts of Buda Pest, wares of every sort, wires in cases, or in the ball; dyes, cut out in the blocks, cases of candles, balls of corks, and almost everything else, are kept by the wholesaler, as precaution against fire losses, being shipped from there to the small dealer.

Novelties in the Hardware line abound in Buda Pest. There are bunches of keys containing, respectively, knife, pen and file; there are revolvers that shoot forth a lead pencil, and there are great pocket knives convertible into a tablespoon, knife and fork, pen knife and cork screw.

Toward the Serb frontier, wire is in great demand, being trailed from poles like our telegraph poles, set over the hop fields for the vines to trail about. Among the Ice Cavern districts, to the north of Hungary, oil lamps are among the best sellers.

To-day, Hardware dealers from the north, speaking the German, traverse Bosnia, which, less than thirty years ago, was a brigands' paradise, and do a splendid business. Bazaars here for Hardware are all grouped together, and as the guild system obtains, prices and wages are the same in all. Sprinkling cans have a great sale here, being carried about by boys and filled with cold water, which is hawked at a pittance the glass; for water is never free in the Balkans. Razors, too, go quickly here, for the Moslems shave the entire head in the summer. All horses in the interior of Bosnia are decked with sleigh bells, and these, too, the Hardware dealer is expected to handle. The oblong cans in which Standard Oil is sent are also traded in by him, being bought by the peasants for carrying water from the town fountain.

At Rejeka skillets and coffee cups, ladles and cake shovels, one and all for tacking to the wall behind the stove, as well as wooden salt boxes, the housekeeper gets from the Hardware dealer. Kettles, too, and the sprinkling can for drinking water, as well as a waffle pan, she must have for keeping beneath the range.

At Sarajevo, the capital, the bazaars are large and contain in some cases almost everything Hardware shops of the smaller sort can provide. Canary cages for the homes of the Austro-Hungarian officers, are novelties one would scarce expect to find here. The Hungarian merchants have established a commercial museum at Sarajevo, as our wholesalers might at Manilla, where one specimen of everything they have to sell is exposed, as in some gigantic Hardware store, and from the numbers on these, the peasants order, by catalogue, in whatever quantity they desire. Things for the kitchen are especially numerous here.

For the Emperor's birthday, at Sarajevo, great numbers of little tin cups are sold, being filled with oil and a wick added, and then set in the windows or on minarets, in long rows, to do their share of the general illumination of the city. Knives, with an ornamental handle of bone and fitting in an exceedingly light, yellow case covered over with tin, or other metal, also have tremendous sales.

Regulation Hardware stores, aside from the bazaars, also obtain in Sarajevo, and among them even dog muzzels have been introduced.

Along the east coast of the Adriatic, Hardware stores, as such, hardly exist, being merged in the general store that supplies the town with all its external needs.

For the cafes of Belgrade and elsewhere sets of dominos are sold over Servia. The peasants, too, require a long, clumsily carved beam, borne either over the shoulder or as a yoke about the neck to either end of which baskets and parcels or even bunches of fowl, tied by the legs, are borne. Clocks are sold by the Hardware dealer here, with the hour hand the larger of the two.

A feature of the stores of the trade, at Nisen, the military city of Servia, are the long bundles of rope suspended from bars over the door. At Bucarest, the capital of Roumania, the gipsies are the locksmiths and the tinkers, and the good friend of the Hardware man. In the poverty-stricken Rouman villages, Hardware stores could not exist, and so the women carry their tin cans and the men the bells for their horses or such little purchases with them on the semi-annual visit to "town."

At Rust-chuk, the metropolis of Bulgaria, the stores put up their shutters during the noon hour as at Buda Pest.

At Plevna, where the battle was fought, there are stores selling cheap knick-knacks only; all other thinks being of home manufacture.

At Sofia, a swinging saw, employed on the faggots piled in the front gardens of the finer homes, is an unexpected novelty in the stock in trade.

At Philippolis, in East Rumelia, stores sell a queer bronze figure of a peacock, each feather of whose tail, when drawn proves to be a neat table knife.

✤

THE NATIONAL CUTLERY COMPANY, Westmoreland & Boudinot Sts., Philadelphia, Pa., have recently published an exceedingly interesting and instructive catalogue in regard to which they state: "In issuing this Catalogue our aim is to bring before the buyers the great variety of Scissors, Shears and Snips manufactured by the National Cutlery Company. and to call attention to their superior quality. We are leaders for quality, finish, perfect adjustment and cutting power, and the buyers are fast becoming aware of these facts, as the very great increase of our sales demonstrates." The catalogue contains 80 pages, is profusely illustrated, and is indexed. A view of the large plant occupied by this Company is shown and a page is devoted to facsimiles of medals which have been awarded at the three Exhibitions where the Company's goods have been exhibited. The catalogue is very attractive in appearance, the cover being artistically printed in scarlet and green. Send for a copy.

"INTERSTATE CHAOS."

The Committee on Bankruptcy Law and Legislation of the National Association of Credit Men invite especial attention to the address on "Interstate Chaos" which was delivered by William H. Hotchkiss, Referee in Bankruptcy at Buffalo, N. Y., and Lecturer on the Law of Bankruptcy in the New York Law School and the Buffalo Law School, copies of which may be obtained from the National Association of Credit Men, 41 Park Row, New York. The purpose of this very able address is to make plain the wide diversity in the State Statutes which refer to the settlement of insolvent estates, and also expose their manifest unfairness as far as the rights and interests of creditors are concerned. While these questions have been matters of frequent reference in addresses and articles on bankruptcy legislation, they have never before been expounded with the detail and vigor shown in Mr. Hotchkiss' work. In the appendix will be found a compilation of opinions of the press of the country, both favorable and unfavorable to the Bankruptcy Act, which leaves the reader in no doubt as to the sentiment of the country in behalf of the continuance of that beneficent law.

LEGAL CORRESPONDENCE

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Law Editor "HARDWARE," No. 309 Broadway, New York City.

RIGHT TO STOP IN TRANSIT.

QUESTION: Our firm shipped a bill of goods amounting to $200 to a customer on credit, the freight charges to be paid by him. The goods arrived, but were detained by the railroad company awaiting the payment of the freight. Now the customer has become insolvent and cannot pay. Can we prevent him from getting the goods?

ANSWER: You have the right to stop the goods in transit on learning of the buyers insolvency and to resume possession of them until the price is paid. That right continues until the railroad company makes an actual delivery or wrongfully refuses to deliver the goods. So long as the buyer declines or fails to accept delivery the transit continues. This right must be exercised by giving immediate notice to the railroad company. But it is defeated if the buyer, being in possession of the bill of lading with the seller's consent, has transferred it to a bonafide.

PAYMENT OF A CHECK.

QUESTION: Ten years ago Brown gave Smith a check on the bank for $10 in settlement of account. Smith through negligence failed to present the check for payment till now, and now the bank, acting on the advice of Brown, refuses payment. Brown is solvent. Does the check outlaw? What is Smith's remedy?

ANSWER: Smith's claim is barred by the statute of limitation. While there is some conflict as to when the statute begins to run in favor of the drawer of a check, the law is settled that it is the clear duty of the payee to present the check within a reasonable time after receiving it. We think that a reasonable time expired with the expiration of the statutory period in which to sue, i. e., six years. We do not think the payee was entitled to sleep on his rights till the original debt was barred by the statute, and then make his negligence in presenting the check the basis of a claim to the right to bring his action after the statutory period would otherwise have expired. From this reasoning it follows that Smith has no remedy either on the check or the original account for which it was given.

SEPARATION AGREEMENT.

QUESTION: If a man and wife separate owing to a mutual agreement and enter into a separation agreement by which the husband contracts to pay his wife $15 a week for her support during her lifetime, will this agreement prevent the parties from obtaining a divorce? If not, what will be the effect of the divorce on the husband's liability to support his wife? Does it make any difference if the parties again live together as man and wife after the agreement is made?

ANSWER: It is now settled that a separation agreement if made through the medium of a trustee after an actual separation has taken place or in contemplation of immediate separation, is valid and will be enforced. Such an agreement is no defense to an action for a divorce founded on the misconduct of either party. If the divorce is obtained against the husband for his misconduct he is still bound to support his wife under the agreement. A divorce against her would probably relieve him of the obligation. If after the agreement has been made the parties again live together as man and wife, this rescinds the agreement, and neither party can claim anything under it thereafter.

MARRIAGE—RIGHT OF PARENT TO HAVE ANNULLED.

QUESTION: Is it necessary for a girl who is a minor to obtain the consent of her parents to marry in the State of New York?

REPLY: It is not necessary to obtain the parents' consent in order to render the marriage valid. If the girl has not attained the age of eighteen years, she is not herself able to give a legal consent to her marriage and an action may be brought by her or by her parents or guardian to annul the marriage. If, however, the minor cohabits with her husband after she attains the age of eighteen years, this will constitute a ratification of the marriage so that it cannot be annulled.

CONTRACT OF MINOR TO BUY A BICYCLE.

QUESTION: I sold to a girl seventeen years of age, a bicycle, and she agreed to pay $45 for it. $15 of the money she paid down and the remainder was to be paid in equal installments of $1.25. She bought the wheel in June and used it until September and then returned it to me and demanded that she be paid back the total sum of $26.25 which she had paid upon the contract. I took the wheel, but refused to return the money, because the use of the wheel exceeded the sum paid. Her claim is, that because she was a minor, she could not make a valid contract.

ANSWER: While it is a general rule that an infant's contracts are voidable and he may avoid them at his pleasure, there are certain well recognized exceptions or qualifications to the rule. One of these is that where an infant pays money on his contract and enjoys the benefit of it and then seeks to avoid it, he cannot recover back the consideration paid. He cannot have the benefit of the contract on one side without returning the equivalent on the other. This is because the privilege of infancy must be used as a shield and not as a sword. We think the principle applicable to this case is that the minor having had the use of the bicycle from June to September ought in justice to pay for its reasonable use. If the use of it is equal to the sum she has paid, we do not think you are bound to return her anything.

AN ARTISTIC CALENDAR.

The Harrington & Richardson Arms Company, Worcester, Mass., has started the holiday season by the issuance of a characteristic calendar of artistic merit, where a handsome feminine is pictorially represented, pistol in hand, leaning over a fence and

pointing to a target, which shows the evidence of her skill in placing two bull'seyes, and three in the inner circle. She is picturesquely clad in appropriate hunting costume and presents a picture in herself worth being perpetuated. The Company announces their willingness to supply readers of HARDWARE with a copy of this calendar, on mentioning the fact, without charge, as long as the supply lasts. It is to be hoped that our readers will take advantage of their free offer.

RECENT TRADE PUBLICATIONS.

AMES SHOVEL AND TOOL COMPANY, (St. Louis Shovel Company Plant), St. Louis, Mo., have made us the recipients of their Catalogue and Price List No. 3, which is in large pamphlet form, containing forty pages. This Company manufactures Shovels, Spades, Scoops and Drain Tools of superior quality, numerous illustrations and detailed descriptions of which are given in an interesting and attractive manner in the catalogue. If you care to receive copy of same write for one and it will be gladly sent at once.

MCCRAY REFRIGERATOR COMPANY, Kendallville, Ind., manufacturers of Refrigerators and Cooling Rooms of any size, style and arrangement, built to order, have sent us a very attractive pamphlet which contains illustrations and detailed descriptions of their Roll-Top Butter, Roll-Top Butter and Cheese, and Grocers' Refrigerators. The pamphlet is very interesting and will be found handy and useful to parties desiring to receive same. Send for Catalogue No. 64-G.

GIFFORD-WOOD COMPANY, Arlington, Mass., makers of Ice Tools and Ice Handling Machinery, have sent us a copy of their latest catalogue which describes, illustrates and prices a number of the goods manufactured by them. The catalogue is gotten up in a very attractive and interesting manner and is finely printed and well arranged throughout. They state that their prices are as low as first class articles can be made, and that "Standard Goods" represent the class in which their manufactures have always been held, and that the reputation will be preserved on the merits of what they offer. The Company represents the combined facilities and efficiency that have characterized the firms of Wm. T. Wood & Company and Gifford Bros. for so many years, and they aim to give their customers the very best Ice Tools and Ice-Handling Machinery that can be manufactured. Any parties desiring catalogue will receive one promptly on request.

THE DAVID BELL ENGINEERING WORKS, Buffalo, N. Y., have sent us a copy of their Bulletin 805, which shows their line of "Standard Guide" Steam Hammers, of which they are making an exclusive specialty. They state that these Hammers are now all built with what they term "Re-Inforced Guides and Stiffened Column", which greatly increases their durability and efficiency. They claim that they are the highest grade on the market and are all thoroughly tested with steam before shipment, and they consider their largely increased business in these machines to be due to the care and thoroughness with which they are built. The Bulletin may be had on request.

THE MERIDEN BRITANNIA COMPANY, Meriden, Conn., have sent us an exceedingly attractive folder called "Family Plate", which contains in the form of a historical review many interesting facts about American tableware since 1874. Each succeeding decade has been marked by great strides of advancement by this Company, and to-day the trade-mark "1847 Rogers Bros." on silver plated goods stands for the same degree of excellence as the mark "Sterling" on silver, when put there by a reliable maker. A number of very fine cuts are given in the circular—candlesticks, ladle, trophy cup, chafing dish, a plush case containing knives, forks, spoons, etc., tea set with tray and a handsome symbolic decorative piece. For information regarding silverware of all kinds write for catalogue.

ROYAL MANUFACTURING COMPANY., LIMITED, 408 Commerce St., Philadelphia., have sent us a very interesting pamphlet which describes, illustrates and prices Royal Specialties, including Hardware, House Furnishing, Hotel, Cafe, Household Kitchen Utensils, French Fryers, (twenty-six styles and sizes), Fish and Shad Planks, "Henis" Broilers, Asbestos Household Articles, Wire Traps, Muzzles, Pickers, etc. The pamphlet is a handy and useful one, and if you care to receive a copy write for Catalogue No. 14.

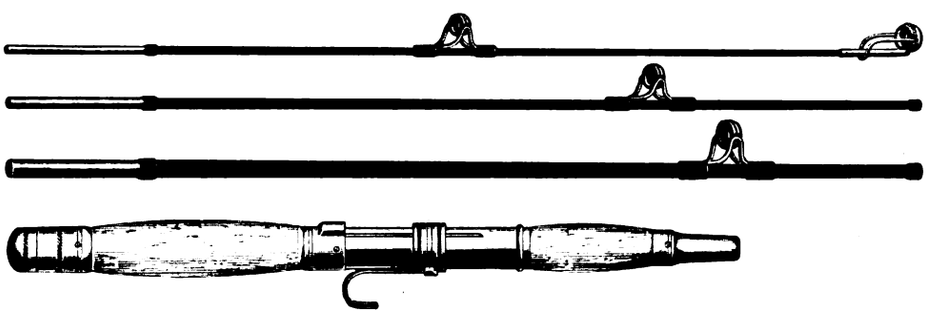
H. A. MOYER, Syracuse, N. Y., has sent us one of his exceedingly handsome and artistic catalogues for 1906, which describes and illustrates the various styles of Carriages, Surreys, Phaetons, Stanhopes, Runabouts, Road Wagons, Buggies, Buckboards, Democrats, etc., manufactured by him. The following Warranty gives sufficient proof that the Moyer goods are of the highest standard of excellence: "I warrant all work manufactured by me to be of good material and should any breakage occur within one year from date of purchase from me by any reason of defective material or workmanship, repairs will be furnished for the same free of charge." One of these beautiful catalogues will be sent to interested parties on request.

CHARLES AMOS & COMPANY, Detroit, Michigan, have sent us a large thirty-six page pamphlet which is their General Catalogue No. 50-A. This catalogue describes and illustrates Decorative Bronze, Brass, Iron and Wire Work for Buildings and Grounds, including Sash Bars, Canopies, Wire Guards, Grilles, Steel Railings, Fences, Gates, Iron Stairs, Fire Escapes, Etc. The catalogue will be found very valuable for parties interested in this line to select from, and will repay a careful perusal. Copy of catalogue of these well known goods will be gladly and promptly sent upon request.

THE JOHN E. BASSETT & COMPANY, New Haven, Conn., have sent us a number of their Model Advertisements which they supply to dealers wishing to advertise their goods. Many dealers do not have time to spend on preparing advertisements themselves and do not want the expense of employing a man for the purpose, and by ordering them from the Bassett Company they save time and money. These advertisements are written by a Hardware man of eighteen years experience in the general Hardware business. They state they have recently revised and reprinted fifty-four of their best advertisements, covering the most saleable things in the Hardware line from January to December. They can be used in any general Hardware store almost without change—except in names and prices. They will be glad to give you any information you may desire in regard to these advertisements.

THE REED MFG. CO., Newark, N. Y., have sent us a copy of their Thirteenth Annual Illustrated Catalogue, which is a very handsome production, finely printed on excellent paper, and carefully arranged thoughout with a view of showing to the best possible advantage the goods manufactured by them. The catalogue contains 140 pages, is indexed and profusely illustrated, and the cover is artistically lettered and decorated in gold. The Company claims that all their goods are absolutely as represented and up to the highest standard in every respect, and that the prices are and always will be as low as possible, consistent with the quality of the goods offered. They also state that the size of the business in all its departments enables them to carry heavy stocks and to make prompt deliveries for all goods ordered. They lay especial emphasis on the fact that every article of their Anti-Rusting Tinware is guaranteed absolutely rust proof, and in addition to this liberal warrantee protecting customers in the handling of this line they have their assurance that in high-grade materials used, in skilled workmanship employed, in rigid inspection of all goods shipped, and in every particular possible they propose to adhere strictly to their established policy that "the best is always the cheapest." Catalogue will be gladly sent upon request.

THE STANDARD NOVELTY WORKS, Duncannon, Pa., have sent us a very artistic little booklet exploiting their popular Strongfast and Swiftlite Steel Sleds. They state in regard to them: "We positively do not use any bolts or screws in their construction, all riveted together as if of one piece, made of 'tee' steel, painted with bicycle enamel, artistically decorated, and made only for the trade who are looking for a high-class article." The catalogue is well printed, and the illustrations are colored to correspond with the sleds they represent, which adds to the attractiveness of the book. Send for catalogue for 1905.



THE ATLAS SHEAR COMPANY, Bridgeport, Conn., manufacturers of Hardware Specialties, Cast Shears and Scissors of every description for Domestic and Export Trade, are presenting to the trade a very attractive book which is their Catalogue No. 16. Shears and Scissors for nearly all purposes are described and illustrated, and parties interested in this especial line will find the catalogue instructive and helpful. Copy of same may be had upon application.

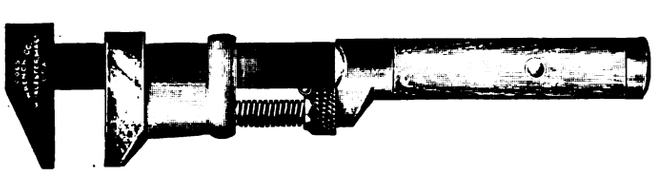
NEW GOODS AND SPECIALTIES.

BRISTOL BAIT CASTING ROD No. 27.



The Horton Mfg. Co., Bristol, Conn., as the result of a demand for a rod like its "Kalamazoo," but with agate guides, is making a new rod which they designate as No. 27. This rod is made with agate guides, which are German silver mounted, made high, with large openings. The top is a special off-set agate style and German silver mounted. With these trimmings the friction of the line is reduced to a minimum, and they are alluded to as strong and durable. The handle is 14 inches long, with double cork grips and the company's patent detachable finger hook. The rods are furnished in 4½, 5 and 5½-foot lengths, weighing about 9¾ ounces. Other lengths can be supplied to order.

BRISTOL BAIT CASTING ROD NO. 27.

HAMMER HANDLE MODEL WRENCH.

The Coes Wrench Co., Worcester, Mass., are introducing to the Hardware and Supply trade a new model of a wood handle wrench as a companion wrench to the Company's steel handle model. This wrench possesses all the good features of the steel handle and in addition has a "Hammer Handle". It is designed to meet the wants of those who still wish for a wood handle, or where the wrench is not subjected to heat or moisture. No gripping power is lost as it fills the hand completely and even in the large sizes the handle is not too large for one hand.

HAMMER HANDLE MODEL WRENCH.

The handle is heavier than has ever been put on a wrench before and is constructed from hard wood. The heavy webbed handle frame is solidly connected to the bar under tension by a key, in addition to the riveted tip and the extra heavy cross rivet through the center. The wrench is said to be practically as strong as the steel handle style. The registered trade-mark of this wrench is "Hammer Handle", and the wrenches are packed under a blue and gold label. Either this wrench or the "Steel Handle", it is claimed, size for size, is thirty per cent. stronger than any other wrench made. The 15 inch size is ready for the demand of the trade at present; this will be followed by the 10, 12, 18 and 21 inch sizes, which will soon be on the market. There is no advance in price over other styles.

ELLIS ADJUSTABLE S WRENCH.

Patterson, Gottfried & Hunter, 146-150 Centre Street, New York, have recently placed on the market the Ellis adjustable offset S wrench of which we present illustrations. Fig. 1 represents the wrench for use as a regular adjustable S wrench, special attention being called to the jaws, which are designed to afford the greatest strength without being too large to operate in confined places. Fig. 2 is another view of the same wrench with the jaws offset to the left. This is accomplished by the means of a small round head spring pin which, pulled slightly toward the person, allows the jaws portion to be swung to right, center or left, releasing the pressure on pin, causing it to catch in either of the three perpendicular square notches shown in the illustration. Fig. 3 illustrates the same wrench with pipe jaw inserted, thus making the tool quickly interchangeable from a nut wrench to a pipe wrench, a valuable feature in a portable kit and for automobiling, etc. The importance of this wrench is its adaptability for working around corners, behind pipes and in many otherwise difficult and inaccessible places. There are four sizes and the jaw openings are operated by the milled edge barrel screw, the jaw capacity being the same standard as in regular wrenches, size for size. The 6 and 8 inch sizes are nickel plated. The 8, 12 and 18 inch sizes have a pistol finish. This style of wrench can be supplied in all sizes named, with either plain or pipe jaw, and in 6, 8, and 12 inch sizes with both plain and pipe jaws. All pipe jaws are pistol finished.

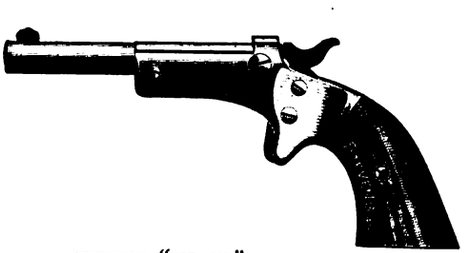


FIG. 2.

FIG. 3.

STEVENS "TIP UP" PISTOL NO. 41.

The J. Stevens Arms & Tool Company, Chicopee Falls, Mass., are still manufacturing the little pistol of which we give an illustration, it being one of the original models of Stevens Arms, introduced by them over 40 years ago; and, although the intervening period has seen many changes that have revolutionized the business, the company still manufactures this little

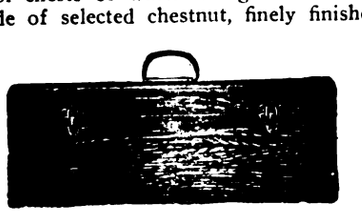
STEVENS "TIP UP" PISTOL NO 41.

Digitized by Google

pistol and regularly lists it among their later productions. No better proof is necessary that it is yet numbered among their practical products. This No. 41 pistol is a neat little model for ladies' use, and can be recommended for first lessons in shooting. It is accurate at short ranges, say up to 15 or 20 yards, and most convenient on a short trip where there may be some opportunities for target practice or shooting small game. Something of the sort frequently comes handy to the angler, for a big fish is sometimes difficult to bring within reach of the gaff, and occasionally a snake holds possession of some desired vantage ground. The barrel of this pistol is half octagon, blued, 3½ inches in length and has perfect rifling. It has plain walnut stock and open sights, and weighs 7 ounces. Adapted to .22 short R. F. cartridges only. List price, $2.50.

THE "S & S KNIVES."

The National Cutlery Company, Detroit, Mich., are the manufacturers of a line of Cutlery to which they have given the title of "S & S", and the superior quality of which is demonstrated in the accompanying illustration. They include Skinning, Boning and Sticking Knives, Butchers' and Steak Knives, including the Scimeter pattern of the latter as well. Built of special formula steel, handled throughout the entire process of manufacture by only skilled workmen, and tempered by special process. "S. &

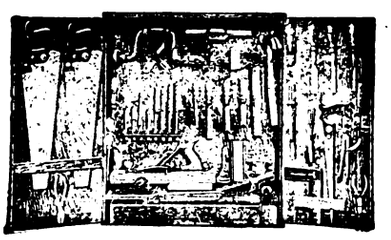


THE "S & S KNIFE."

S" Knives have no hard or soft times during their manufacture, making it practically impossible for any but perfect knives to leave the factory. The butcher who appreciates a good knife should order "S & S." Being hand forged throughout they are referred to as holding an edge under the most severe use to which they can be put. They are recommended to the trade as having the entire confidence of the butchers and needing no effort on the part of the dealer in selling them. Samples were submitted for test to the "Amalgamated Meat Cutters of America at Chicago," and after the most thorough and exacting trial of their merits, the President over his signature testified to their superiority over any other brand now on the market that had previously been used; and in point of quality admirably fitted for the use of skilled butchers.

TOOL CHESTS AND CABINETS.

THE AMERICAN TOOL CHEST CO., 200 West Houston Street, New York, N. Y., are manufacturing a fine line of electricians', machinists' and pipe fitters' tool chests, among which are the electricians' tool chests of which we give illustrations. These chests are made of selected chestnut, finely finished, lock cor-

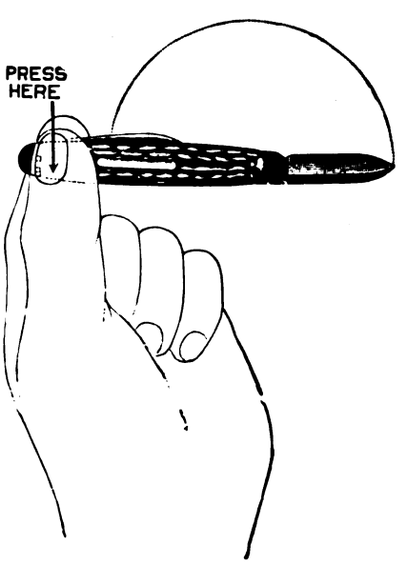


ELECTRICIAN'S TOOL CHEST, NO. 15.

nered and trimmed with brass clasps and handles, the three smaller sizes having handles on the lid. They are manufactured in five different sizes, running from 14⅞x6x6 inches to 32½x9¼x6⅝ inches, some of which are with two drawers instead of one, the dimensions given being all inside measurements. The smaller size illustrates their Nos. 14, 15 and 16 while the larger cut shows No. 19. We also illustrate in the cut here-with a "Eureka" tool cabinet No. 2, which is made of chestnut, with brass lifting handles, nicely finished, outside dimensions of which are 27 inches high, 20 inches wide and 18 inches deep. This contains 48 tools of extra quality as illustrated, and is

ELECTRICIAN'S TOOL CHEST, NO. 19.

an exceedingly handy combination to have for household purposes. They manufacture also a very popular and useful tool chest for the purposes needed on house or farm, which is designated as the "Handy Tool Chest, No. 1903", which is of



"EUREKA" TOOL CABINET, NO. 2.

dimensions 27 inches long, 8 inches wide and 4 inches deep, made of bass wood with dovetailed corners and having an inside partition. It is provided with 18 superior quality tools selected with a view to their being in general request for the many wants for which it is planned.

CRANDALL AUTOMATIC POCKET KNIFE.

Crandall Cutlery Company, Bradford, Pa., are placing upon the market an Automatic Pocket Knife, simply constructed, yet perfect in principle and one that is designed to be a popular specialty and meet with ready sale. When one realizes that it can be opened with one hand, or even with gloves on, its general

CRANDALL AUTOMATIC POCKET KNIFE.

utility readily becomes apparent. There are no buttons or spiral springs calculated to shorten its life used in its construction, and the durability of the appliance is unquestionable. In its general make-up the best hand forged steel is referred to as being used, with the special Radium Electric finish calculated to prevent any possible rust and tarnish. It is made in three styles; Stag, Shell and Pearl.

"PIKE'S STONOIL."

After experimenting for years with all sorts of oils and combinations of lubricants, the Pike Manufacturing Company, Pike, N. H., have at length found what they consider an ideal oil for use on Oilstones, Hones and other abrasive surfaces. It is

Digitized by Google

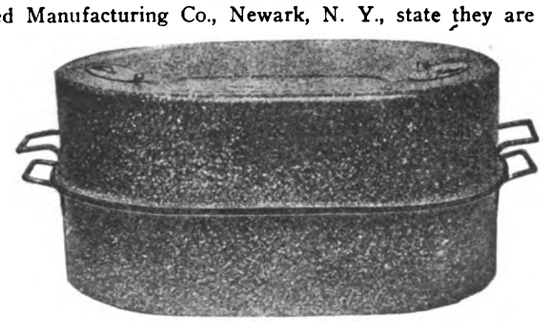
marketed under the name of "Pike's Stonoil". It is absolutely free from acid, so it will not corrode, or harden stones, and is also free from vegetable matter so that it will not become gummy, thereby causing the stones to glaze. It is in short an acidless,

"PIKE'S STONOIL."

non-drying oil, thin enough to flow freely, yet with sufficient body to float off heavy steel cuttings. It is also a perfect oil for guns, sewing machines, razor strops, clippers, clocks, locks and all articles requiring oil as a lubricant or a preservative. It is also adapted for cleaning all finished surfaces, wood or metal. Pike's Stonoil is put up in two sizes; six-ounce bottles with nickel screw caps which retail at 25 cents, and two ounce, plain bottles which retail at 10 cents.

CRANDALL'S AUTOMATIC RAZOR STROP.

The Crandall Cutlery Company, Bradford, Pa., are placing on the market a novelty that will appeal to every man who shaves himself. It is an Automatic Razor Strop called the "Sure Edge", of which we give an illustration. It is made of the best material that can be selected for the purpose. The leather is

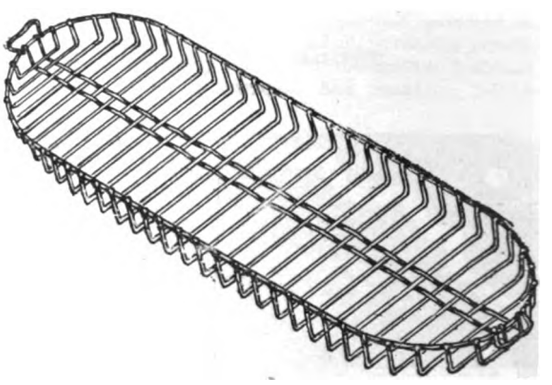


CRANDALL'S AUTOMATIC RAZOR STROP.

tanned by special process, producing sharpening qualities far superior to any ever obtained by any previous method. The process of tanning, which is confidently termed "Sure Edge," is known only to the manufacturers. The case is silver plated on brass, and the strop automatically rolls into the handsome case and is held there for further use protected from dust and grit so ruinous to the edge of a razor.

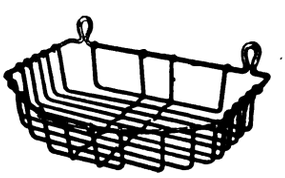
REED MANUFACTURING COMPANY'S SELF-BASTING ROASTER.

Reed Manufacturing Co., Newark, N. Y., state they are now



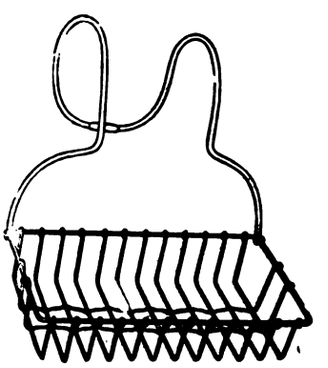
SELF-BASTING ROASTER.

prepared to fill orders promptly for their Flintstone Enamel Seamless Self-Basting Roasters. They are making this Roaster in three different sizes, suitable for a 12, 16 or 20-pound Roast, and in offering the Roaster to the trade they have such confidence in its merits that they desire to furnish a guarantee with every Roaster purchased, that every Flintstone Self-Basting Roaster that is not up to the standard of quality and workmanship, or does not do all that we claim for it in booklets and circulars published, they stand ready to replace such Roasters free of charge with a new article at any time, or refund the purchase money.



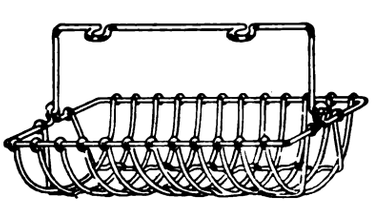
WIRE GOODS SPECIALTIES.

THE BRIDGEPORT WIRE GOODS COMPANY, Bridgeport Conn., and 82 West Broadway, New York, are increasing their line of selling novelties manufactured from wire, that makes the articles composing it up to date in every respect and such as the wire dealer finds it worthy of encouragement to add to his stock. To convey an idea of their selling merits we give in the course of this article illustration of a few of these specialties that show how greatly the trade is benefited by the utilization of wire



BROILER, NO. 15.

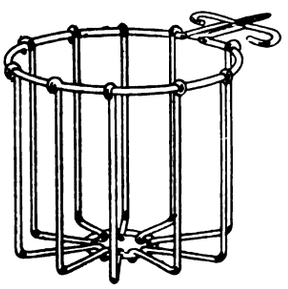
in manufacturing conveniences, to be retailed at moderate prices. We gave in a recent issue an illustration of their Smokeless Broiler; to this is now added a larger size Broiler, oval style, No. 15, that sets down on the stove over the whole fire, that can be furnished with or without lids. No. 23 is an ordinary Soap Dish that is an extra strong and practical bracket for kitchen use;



SOAP DISH, NO. 23.

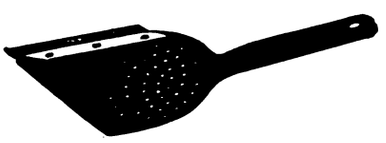
SOAP DISH, NO. 33.

while No. 33 is a strong, durable rack on the same model, that is made of heavy wire, well tinned after making. No. 40 is a balance Soap Holder, always level in use, which, like the last, is



BALANCE SOAP HOLDER, NJ. 40.

heavily tinned before making, and is especially strong and salable. No. 37 is a Tumbler Holder which is a combined tumbler and tooth brush holder, fitted with a special steel cut screw to use in adjustment, made strong and durable. Added to these notable sellers we illustrate No. 27, which is their Diamond Sink Cleaner, one of the most popular articles made by the Company and unsurpassed for the purpose for which it is designed. The



Digitized by Google

Company furnishes a catalogue in which more extended information is given which should be in the hands of the dealer

TUMBLER HOLDER NO. 37.

desiring profit making lines. They manufacture in addition a line of Tea and Coffee Strainers and Sink and Cuspidor Brushes,

DIAMOND SINK CLEANER, NO. 27

which with their "Ideal" Toasters and Broilers are all made to sell at moderate prices but with a good margin of profit for the dealer.

CEMENT COATED WIRE NAILS.

BY A. C. RULOFSON.

For over fifty years the use of wire nails has been general in Europe, where they have entirely superseded the old hand-forged and cut nails. It is only in recent years that the conservative Englishman has recognized their superiority, while in China and Japan wooden pegs have long been discarded and large importations of wire nails are made from the United States and Europe.

Twenty-five years ago the manufacture of wire nails commenced, in a small way, in the United States, and at that time a shipment of 25 kegs was made to one of the largest of the leading wholesale houses in San Francisco. This marked the introduction of wire nails on the Pacific Coast, and their consumption increased with leaps and bounds, so that in a short time they almost entirely drove out the old style cut nail which was being manufactured in Oakland, California.

In the course of a few years the cut nail manufacturers closed down and have never reopened their mills. Manufacturers, wishing to keep abreast with the times, started wire nail plants on the Pacific Coast, and at the present time, there are two at Oakland, one in San Francisco, and one being started in Vancouver, B. C.

The advantage of wire nails became so apparent that the engineer, architect and carpenter were quick to adopt them, and they have come into such general use that the term "nail" is accepted as meaning wire nail. It was generally admitted that the article designated "Smooth Wire Nail" by the trade, was more economical than the cut nail because there were a greater number of them to the pound, but a disadvantage lay in the fact that they did not hold as well as the old-style cut nail. This naturally turned the American inventive genius to a consideration of the subject, and many so-called improvements were adopted to increase the holding power. They were barbed, made flat, triangular and other shapes, but none of these changes were effective, nor did they come into general use.

Later, a Boston party by the name of J. C. Pearson discovered a process of coating the ordinary wire nail with a compound which, in lieu of a short comprehensive name, he called "cement." This compound consisted largely of resin because of its holding power.

Nails dipped in this compound were introduced on this coast by specialists who, strange to say, devoted most of their attention to the making of boxes, and they met with great success. Today there is scarcely any class of packing box on the Pacific Coast that is not fastened with one of these nails.

Railroad companies are using them largely to the exclusion of other nails and the Southern Pacific Company has used thousands of kegs of them in its building and car works.

These coated nails are now being carried by all the leading jobbing house on the Pacific Coast, and they are generally finding their way to the retail stores. As they are sold at the same price per keg as the common wire nails, it is believed that they will supersede the latter and come into general use, which will mark a new epoch in the nail trade.

A FIELD FOR LIMITED CAPITAL.

In all retail merchandising, says E. D. Ibbotson, in the *Sporting* immense capital, the small dealer is sometimes heard to say that his opportunities are rapidly growing less, that his business is each day being absorbed by the larger competitors and that in time there will be no place for the small store in the business world.

In all retail merchandising, says T. D. Ibbotson, in the *Sporting Goods Dealer,* the field for the dealer with small capital is nowhere as good as in the sporting goods line. Whether the small retailer of boots, shoes and general furnishing goods will soon be swallowed up by the department store may be a question for discussion, but the fact remains that there will always be a place, in all cities for the store with a limited stock of sportsmen's supplies, and the bright, enterprising and energetic dealer will always have a good paying business.

The sporting goods dealer with small capital and credit must observe some strict and rigid rules, which if closely followed will soon make his a larger business and more profitable. Because his stock must be limited, he should not become despondent. The largest merchants in the world started with only a few thousand dollars, and with shelves more than half filled with empty boxes attractively labeled, because the first store occupied possessed space out of proportion to their capital. The dealer of limited means must depend largely on personally influenced trade, and must look closely to the interests of his customers. A trade built up in this manner will continually grow and will stay with him. I know of a dealer in one of our large cities who in a few years' time has built up a first class business in high-class sporting goods, and it is almost all what might be termed a personal trade. Men are the buyers and users of sporting goods, and in purchasing a rod or gun, or even a lot of shells, take pleasure in patronizing a friend who is competent to assist in the selection and advance satisfactory reasons for his choice. Many sportsmen take as much pleasure in outfitting and getting ready for a trip as in actually going on a fishing or hunting excursion. The small dealer should remember this, and ever be ready to discuss with his patrons the technical points of fishing or shooting equipment.

If the dealer's capital and credit are limited, and his store is small, he should, of course, endeavor to build up trade on those lines which show the largest margin of profit. It is well to do all the business possible, but it is the profit rather than the volume of trade that brings substantial prosperity.

It is of great importance to treat all customers with politeness, and to feel a genuine interest in their wants and desires. Always stand ready to accommodate, keep yourself posted concerning fishing and hunting resorts, and make it a point to procure for a patron any desired article with which you may not be provided in regular stock. By working along these lines, many a man who started in a small way 25 years ago, has so increased his trade that to-day his is no longer a little sporting goods store. And present and future conditions are just as favorable for the man of pluck and energy, who will faithfully and earnestly devote his undivided attention to the sporting goods line, for the demand was never so good or so general as now, and every little town of a few hundred people offers its opportunity. A start in the right direction is the one thing required, after which all depends upon application and a persistent clinging to the policy of trade expansion.

✤

THE INTERNATIONAL FENCE AND FIREPROOFING COMPANY, Columbus, Ohio, have sent us a very interesting fifty page catalogue, which describes and illustrates the very complete line of "Jones" Fences and Gates manufactured by this Company. They state that for more than twenty years they have made and sold the "Jones" fence, making a gain each season in the quantity and quality of their product and confidence of the user. They claim that the wire entering into the construction of all gates and fences shown in the catalogue is the best that money and brains can produce. For further information send for this very useful and interesting book.

THE D. F. JONES MFG. CO., LIMITED, Gananogue, Ont., have sent us a very attractive and interesting book which is their Price List of Shovels, Spades, Scoops, Drainage Tools, Etc. They call particular attention to the fact that their Shovels and Spades are made from a cast steel bar. The blade and straps are in one piece; not welded or riveted, and are superior both in quality and finish. They state: "All our goods have our Trade Mark on the handle; the merchant and consumer will, therefore, know the goods not having the Trade Mark are not of our make." Very complete descriptions are given of the goods manufactured by this Company and numerous cuts are shown illustrating the same. The book will be gladly sent on receipt of application.

JAP-A-LAC

REGISTERED TRADE MARK

"WEARS LIKE IRON"

Who's On Top?

Does some other dealer in your town sell more JAP-A-LAC than you? Do you consider *any* dealer your superior? Don't you think you can sell as much JAP-A-LAC as any other man?

Think this over during your noon hour, carefully. It may mean a good many dollars to you. If some other dealer is selling more JAP-A-LAC isn't it because he gives it more attention?

You want to do big things, you want to do things in a big way; to do big things you must have big plans. Try to estimate just what commodity offers you the opportunity of becoming the largest and best dealer in your community. You may be in that position now, if you are, we can suggest a way to become still larger.

JAP-A-LAC has discarded its swaddling-clothes. It is full-grown and healthy. It is, by far, the biggest thing a paint dealer can possibly take hold of. Stop and think! It is absolutely the only article in your stock which is advertised extensively. Is this not true?

We mean by this that it has $200,000 advertising back of it, and we propose to spend a small fortune the coming season in still further promoting its sale. JAP-A-LAC has proven itself; it has grown through six years of continuous advertising to a permanent advertised success. An advertised article bears a closer scrutiny from the public than an unadvertised one. A commodity that is advertised must be absolutely as good or better than anything of the kind made. If it is not as good or better, it can never be an advertised success. JAP-A-LAC is a success, and we want you to realize just what profit there is in it for you to properly handle JAP-A-LAC.

You cannot afford to put JAP-A-LAC on the back shelves of your store; it should be kept in front. We have thousands of women whom we have convinced that they want JAP-A-LAC. There are a great many right in your neighborhood. We would suggest that you try the experiment of pushing JAP-A-LAC to the limit for just one week. Instruct all of your clerks to sell as much JAP-A-LAC as they can. Explain to your customers how it can be used, and place JAP-A-LAC where the passersby on the street can see it, then Saturday night count up your JAP-A-LAC money and see if it does not pay you to give heed to something which offers splendid profits to you.

PUSH JAP-A-LAC

THE GLIDDEN VARNISH COMPANY,

MAKERS OF HIGH-GRADE VARNISHES FOR ALL PURPOSES

641 ROCKEFELLER BUILDING, CLEVELAND, OHIO.

HARDWARE PATENTS

The following list of Patents, Trade Marks and Designs of interest to the Hardware trade are furnished by Davis & Davis, Solicitors of American and Foreign Patents, Washington, D. C. and St. Paul Building, New York City.

PATENTS ISSUED NOV. 21, 1905.

804,823. COFFEE-POT. Louis E. Beers, Polarbluff, Mo.
804,831. WRENCH. Charles E. Cunnius, Freeland, Pa.
804,838. WRENCH. Claude Garrison, Bellaire, Ohio.
804,856. WRENCH. Rolly W. Jackson, Newman, Ill.
804,901. PADLOCK. Harry P. Townsend and Charles E. Johnson, New Britain, Conn.
804,923. BENDING AND SHAPING PLIERS. John W. Bowker, Boston, Mass.
805,058. FOLDING TRY-SQUARE. John H. Daniels, St. Louis, Mo.
805,185. MONKEY-WRENCH. George H. Bell, Passaic, N. J.
805,332. DEVICE FOR SHARPENING EDGE TOOLS. Jones Du B. Yow, Avalon, Ga.

PATENTS EXPIRED NOVEMBER 27, 1905.

393,350. SPRING-HINGE. Frederic R. Bartlett, Freeport, Ill.
393,355. MOP-WRINGERS. Arthur W. Burnham, Gardiner, Me.
393,379. COMBINED LATCH AND KEY. John Maynard, Bowmanville, Ontario, Canada.
393,419. SCREW DRIVER. Felix Chantrell, Reading, Pa.
393,420. SCREW DRIVER. Felix Chantrell, Reading, Pa.
393,421. SCREW DRIVER. Felix Chantrell, Reading, Pa.
393,444. HANDLE FOR SOLDERING IRONS. John J. Murray, Philadelphia, Pa.
393,591. COMBINED STEP-LADDER AND IRONING BOARD. Philester Smith, Rochester, N. Y.
393,646. WEATHER-STRIP. William Holton, Anita, Iowa.

PATENTS ISSUED NOVEMBER 28, 1905.

805,437. DOOR LOCK. J. G. Baisch, Grand Rapids, Mich.
805,506. WRENCH. F. W. Warren and W. H. Preston, Valley Junction, Wis.
805,515. HINGE. G. E. Anderson, Milwaukee, Wis.
805,534. PIPE CLEANING DEVICE. J. E. Flitcroft, Ocean Grove, N. J.
805,596. WASHING MACHINE. L. D. Thornburgh, Forrest, Okla.
805,639. SASH FASTENER. A. W. Dunn, Lampasas, Tex.
805,676. WINDOW SHADE AND CURTAIN POLE ROLLER. F. Shoo. Oakland, Cal.
805,793. WRENCH. J. P. A. Hanlon, Somerville, Mass.
805,904. DUST PAN ATTACHMENT FOR BROOMS. L. B. Despain, Pacific Grove, Cal.
805,946. WRENCH. A. L. Crittenden, Shellman, Ga.
806,061. WRENCH. J. W. Butler, Shreveport, La.

PATENTS EXPIRED DEC. 4, 1905.

393,033. WASHING MACHINE. Nathan S. Ruddock, Granite Falls, Minn.
393,092. WASHING MACHINE. Thomas L. Barker and Joseph Hornbaker, Westfield, Ind.
393,245. IRONING BOARD. George R. Kidder, Imlay City, Mich.
393,286. CURTAIN FASTENER. Samuel Wooley, Long Branch, N. J.
393,301. KITCHEN CABINET. Fannie E. Foster, Milwaukee, Wis.
393,305. HINGE. Louis Hillebrand, Philadelphia, Pa.
393,321. WRENCH. Daniel A. B. Bailey and Norman McGillivary, Pottsdam, N. Y.
393,339. IRONING BOARD. Nathan N. Morgan, Leavenworth, Ind.

NEW CATALOGUE.

THE GOODWIN & KINTZ COMPANY, Station B. Winsted, Conn., have recently published an extremely interesting book of forty-four pages, which is their Catalogue No. 26. This is a very artistic production, and contains a very complete showing of the Gas and Electric Portables, Electroliers and Newels manufactured by them. The catalogue contains over 125 illustrations and the cuts are unusually fine. They state that they have acquired the moulds and patterns for Figures, Electroliers, Portables and Newels made by the Brooklyn Brass & Mfg. Co., of Martinsburg, W. Va., many of which are shown in the catalogue, and they are prepared to supply any of the patterns heretofore made by them. They have confined themselves to their own finishes in the descriptions, but can supply the Old French Bronze or Titian Finishes made by the Brooklyn Company if same are preferred. If you are not already in possession of this very interesting and useful catalogue write for same at once.

REVIEW OF THE MARKETS.

WIRE NAILS: There was a demand for Wire Nails in November that would make favorable comparison with October for volume. Contracts are now being confined to shipment within sixty days, when the purchaser would like to buy for the future, requisitions to follow. Prices are well maintained. The usual concessions and differentials are abrogated. The shortage in cars continues which interferes somewhat with deliveries. Quotations are as follows: f.o.b. Pittsburg, plus actual freight to point of delivery, sixty days or 2 per cent. discount for cash in ten days. Car loads to jobbers, $1.80; car loads to retailers, $1.85.

New York.—Requisitions from the trade are being continued in fair volume. The jobbers' prices for small lots from store are well maintained as jobbers' contracts, most of which have been filled, the renewal would be at a price preventing lower prices. Quotations are as follows: in small lots from store, $2.05.

CUT NAILS: The Cut Nail Association at their recent meeting named a minimum price for car-load lots of Steel Cut Nails $1.70, base, f.o.b. Pittsburgh. The market is an exceedingly strong one as some manufacturers having well filled order books are even quoting $1.75 base instead of $1.70. Quotations are as follows: f.o.b. Pittsburgh, for car-load lots, $1.70 base; for less than car-load lots, $1.75. For car-load lots on dock New York, $1.85; for less than car-load lot, $1.90. Iron Cut Nails at points west of Buffalo and Pittsburgh are held at 10c. advance on Steel Cut Nails.

New York.—In conformity with the advance in Steel Cut Nails by the Cut Nail Association, small lots from store are now quoted at $1.95 base.

BARB WIRE: New business is not very heavy but the market is firm. The orders taken some time ago furnish the principal business as liberal shipments are being drawn from them. Quotations are as follows: f.o.b. Pittsburgh, 60 days, or 2% discount for cash in ten days:

	Painted.	Galv.
Jobbers, carload lots	$1.95	$2.25
Retailers, carload lots	2.00	2.30
Retailers, less than carload lots	2.10	2.40

SMOOTH FENCE WIRE: The mills are busy shipping on contract orders previously booked. The market is firm with the following quotations: f.o.b. Pittsburgh, 60 days or 2% discount for cash in 10 days. Jobbers in car load lots $1.65. Retailers in car load lots, $1.70. The foregoing prices are for base numbers 6 to 9. Other numbers, plain and galvanized wire, take the usual advances.

BRIGHT WIRE GOODS: Concerted action on the part of leading manufacturers resulted in quoting advanced prices on this line of goods. The market is now represented in a gneral way by discounts of 90 and 30 to 90 and 30 and 10. Concessions from these prices are being made to the jobbing trade, most of whom stocked up previous to the recent advance being made.

WROUGHT BRASS BUTTS: An upward tendency on the market reflecting higher prices for products is indicated by the recent conservative advance in the price of Wrought Brass Butts, the discount of which is 15%, an extra 5% being obtainable for round lots.

COPPER AND BRASS PRODUCTS: The advance in prices of raw material has made it necessary to change the discount on a number of leading articles, all of which are advances. Sheet Brass discount 17½%; Brass Wire discount 15%; Brass Rods discount 22½%, and Copper and Brass Brazed Tubing discount 25 and 2%. Concessions from the above prices are only obtained for large mill shipments. Under date of December 4 the following advances were made: Sheet Copper to 23c. base and Seamless Tubes, Brass, to 22c. base; Copper to 25c. per lb. base; Soldering Coppers to 22c. for 300 lbs. and over, smaller quantities an advance on this. Copper Rivets and Burrs to 50 and 5% discount. Burrs only, 30% discount. Copper Bottoms, Pits and Flats (14 oz.) 27c. base, with the regular advances for lighter weights.

SHEET ZINC: Under date December 1, Matthiessen & Hegeler Zinc Company, La Salle, Ill., anounces an advance in price of Sheet Zinc to $7.75 per 100 pounds, f.o.b. La Salle, in 600-pound casks, subject to the usual discounts for cash and quantity.

ROPE: The following prices may be said to represent the market:

	Cents per pound.
Pure Manila, 7-16 and larger	12½
B Quality Manila	11½
Pure Sisal, 7-16 and larger	9½
No. 2 Sisal, 7-16 and larger	8

LINSEED OIL: Under date of December 5 1905, the following reduced quotations were announced on "City" Raw Oil by the Dean Linseed Oil Co.:

In lots of less than 5 barrels.....39 cents per gallon.
In lots of 5 barrels or more.....38 cents per gallon.

The "American" brand for respective quantities, 2 cents per gallon less.

The five barrel price applies only to deliveries of that quantity at one time.

Double Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Regular Boiled Linseed Oil, 1 cent " " " " "
Calcutta Oil.....62 cents per gallon.

THE CLEVELAND TRADE.

Some of the manufacturers are inclined to blame the jobbers who decline to buy their goods because they are sold to catalogue houses, and call it boycotting. The retailers who are their customers decline to buy goods that are advertised by catalogue houses, and this would be sufficient reason for jobbers to decline to purchase them. The origin of this controversy comes from the habit of the manufacturers in giving extremely low prices to a few of the large buyers, putting their goods in the hands of a few (who sell less than one-tenth of their products) at a price that allows them to reduce the value of their entire products. A manufacturer who gives a better discount to even one house because of a large purchase compels himself to reduce his price to others, or compels others to decline to buy them. A rebate given to a large shipper tends to make him a larger shipper and cripple his competitors. The same price and terms to dealers in the same class gives them all the same opportunity to become larger. The retailer asks that he be put on the same basis as the one he must compete with. In particular lines catalogue houses are very large purchasers and manufacturers have made them extremely low prices, which is against the interest of everyone who handles their goods, themselves included, except the one getting the low prices. To make a price for a large order less than he can afford to sell his product for is to injure himself and all his customers. The retailer has a just cause of complaint by being discriminated against. Manufacturers are dependent upon the country store keepers to get their goods in the hands of consumers and should be willing to give them a square deal. THE LOCKWOOD-TAYLOR HARDWARE CO.

THE PITTSBURGH TRADE.

Winter arrived on schedule time and Pittsburgh enjoyed its Thanksgiving Day with Winter sports and fires kindled. Rough weather has its compensations in increased trade for Winter goods, which are now in demand. There should be a large sale of Holiday goods this year, if general enjoyment of the people is any rule to judge by. Retailers are quite ready for this business, as evidenced by the display in windows and newspaper ads. The decision of the U. S. Court in the case of the Drug Trade Retailers, who cut established prices, versus Manufacturers and Jobbers, who tried to prevent their getting goods to sell, is of interest. As we understand the decision, a manufacturer has the right to decide at what price his goods shall be sold by both wholesale and retail dealers, and has also the right to refuse to sell any one he chooses, but manufacturers and wholesalers do not have the right to conspire to prevent any one from obtaining goods. No concerted action of this kind has been taken in the Hardware trade, and in view of this decision is not likely to be taken; but manufacturers individually may be led to see that their interests lie with the dealers who maintain prices and they may refuse to sell to others. This is an educational process and can be carried on without any act that can be construed as conspiracy in restraint of trade. Prices continue strong, with an advancing tendency in several lines, such as goods made of Copper, Cotton and Leather, and retailers will do well to keep full stocks on an advancing market. THE COLUMBUS TRADE.

There is not much that is new in trade conditions except continual advances on almost all lines. Iron, Steel, Copper, Cordage, Twines, and, in fact, a long list of articles are advancing steadily, and it looks as though the top notch has not been reached yet. The Screen goods situation is a hard nut to crack. Two manufacturers were out with prices before the Continental Company was organized and dealers who had the quotations are slow in placing orders at the higher prices, although the outside manufacturers have adopted the Continental prices. Dealers do not take into consideration that there is a legitimate reason for a good stiff advance over the past few years' prices on this line. It is a well-known fact that the cheaper grades of screen doors have been sold at an actual loss to the manufacturers. Add to this, the increase in the price of lumber, which is $1.00 per dozen on the cheapest grade and up to $1.50 on the better grades. It is plain to understand that regardless of any agreement on prices, there would have been quite an advance. However, we believe the advance is more than it should be, and it will no doubt curtail the use of screens to a certain extent. Old ones will be fixed up and the local carpenter will make more than usual. The old saying that supply and demand makes the price, does not hold good always. Made-up screen doors and windows are much higher, while Wire cloth and Spring hinges are lower. Conditions have more to do with prices on manufactured articles than anything else. Agreements are entered into, and up goes the price. Then some one kicks over the traces and starts a fight and cost does not figure; but "beat the other fellow" is the slogan.

The beef trust seems to have the bull by the horns and tail both, and leather is higher than for years. Metals are higher than they have been for years. It may be that lead has advanced on account of the war on Quail and Cotton Tails. If all hunters had no more opportunity of sowing shot than the writer had, the amount used for game should not cause an advance. I had a new experience, and it was most enjoyable, from a hard luck standpoint. My friend, Lou C., informed me that he knew where we could get fine shooting, and, of course, I was ready. We went to Corning and were met by a farmer who lived seven of the longest miles I ever went over—to where the shooting was. The scenery was grand as any one who has driven over Morgan County will testify to. Our host remarked that there was only one life to live in this world, and he believed in enjoying it as we journeyed through it. That sounded good, and we supposed we would have the best of care, good beds and good things to eat; but when we arrived at our destination, after dark (took three hours to go the seven miles), we stopped at a corner the shape of a flatiron and not much larger. A one-story frame house made of plank, nailed up and down, with two rooms, was our hotel. We had bread and butter—fair, some boiled meat that was—well, forget it, and pie. After getting location of the numerous bevies of quail, we decided to retire. The household consisted of Charlie, "Ma" and Teddy. Teddy is a stump-tailed fox terrier dog. They informed us they had but one bed, and as Lou. had his son with him, it looked like three in a bed and a guess where Charlie and "Ma" would sleep, and we are still guessing. They either slept on the kitchen floor or in the barn. We asked for a bed on the floor for one of us, so "Ma" put a feather tick (not many feathers) on the floor, and the kid got in, or rather, on, as he is some heavier than feathers, and there was spare room in the tick, the feathers puffed out on either side and he had nothing but the tick between him and the floor. The kid stood it until about midnight and put up such a protest that Lou. had him change places. Lou. stood it until about 4 o'clock and then traded with the kid. I was extremely anxious to try the floor, but they would not permit it. I was so sorry. Well, we were alive in the morning and after eating boiled cabbage and pie for breakfast (this is the truth), we sallied forth to slaughter Quail. Charlie went with us, so we would know where to find them and not get lost. We tramped up hills like mountains, walked, slid or rolled down, and did not see a quail until after 10 o'clock. We found two little coveys and got five, then went back and "Ma" had the boiled cabbage and pie ready for us. We hung the birds against the side of the house and went where Charlie knew we would find birds, but narry a bird did we see the whole afternoon.

Now Teddy stayed at home and, being a friendly dog, he ran to meet us when he saw us coming. We noticed at once that Teddy had grown very fat since we left at noon, and decided "Ma" had fed him everything in sight and our poor dogs would go hungry; but the problem was solved when we got to the house. The kid asked where we hung the Quail. Lou. said, "Against the house," but they were gone. "Ma" said: "I bet Teddy got them," and I said, "I bet so, too," because he looked like a small balloon. Well, what Lou. said would not do for print. We figured up our trip "thusly:" Fare to Corning and back, $3.15 each; Charley and "Ma" for transportation, cabbage and pie, $12.00; transportation for dogs, $1.50, or $7.30 each. Result: Five Quail, or one square meal for Teddy.

Now Charlie has not been on a train since 1862. "Ma" never saw the inside of a passenger car, never was further away from home than to Corning, seven miles distance, never saw a show of any kind. Charlie never saw an automobile or street car. "Ma" can't read or write, but Charles believes in enjoying life as you journey through it. I have read of such people, but never came in contact with the same utter lack of knowledge as to what is going on in the world before. It is a puzzle to me to know how they endure such an existence, but they seem to be contented. Not having any conception as to what is in the world to be seen and enjoyed, evidently they do not miss it. We got a partial promise from them that they would come to Columbus next Sum-

mer. If they do, Lou. and I will give them such a treat of sight-seeing as they never knew existed. But really it might be a misfortune. Charlie owns four acres of a knob that evidently grows nothing but cabbages, so if they got an idea of what is in the world, they might never be contented again on his "knob;" but what a revelation it would be. It takes all kinds to make a world, and the old saying, "Half the world does not know how the other half lives," is certainly true. Well, here is to Charlie and "Ma," but not to Teddy. THE SMITH BROS. HARDWARE CO.
J. H. Smith.

THE SAN FRANCISCO TRADE.

This is Thanksgiving Day—a beautiful, sunshiny day—and commercial life is in a state of rest and Hardwaremen, according to their statements yesterday, are at their homes eating turkey and feeling very thankful for the blessing this country enjoys in that it has at the head of affairs President Roosevelt. Trade conditions on this coast remain at about the same excellent standard as has heretofore been reported time and again. The long dry spell—195 days without a drop of rain—has been slightly broken the passing week by a light rainfall, not sufficient to do much good except in the southern counties, but enough to break

It is no news to state that at the election this month the union labor voters of this city and their friends elected their Mayoralty candidate by about 14,000 majority, and that an organization called the Citizens' Alliance, composed of employers and their friends, made a hard fight for the man who wasn't elected. But it is fresh news this week that these employers, known as the Merchants' Association, are to have a Thanksgiving banquet tonight at the Palace Hotel, and that they invited to its seat of honor the man who was elected Mayor, Eugene Schmitz. The salient point in Mr. Schmitz's response to the invitation reads like this: "Gentlemen: I find myself unable at this time to accept your invitation. If the banquet is to be considered merely as a pleasant and private social function I cannot with sincerity, or consistently with my honor of self-respect, sit by the side of certain officers of your association, who, without any cause except partisan, political antagonism, have publicly and privately, orally and in writing, falsely, unjustly and unfairly assailed my integrity, my character and my personal honor, as well as the integrity, character and honor of my supporters and friends. If, on the other hand, the banquet is to be a public or quasi-public function, for the consideration of questions of great municipal interest, I am respectfully of the opinion that such matters can be as advantageously and more appropriately discussed in the halls of municipal legislation at the City Hall."

Edw. A. Lund, of the Hardware firm, Lund & Morch Co., Berkeley, Cal., has just returned from an extended trip through Japan, China, India and Europe. Mr. Lund's object in taking this trip was to visit the home of his childhood in Denmark, and as the gentleman is a thorough Hardware man and made many stops *en route*, his first thought at each point was, "What kind of Hardware stores have they here?" In speaking of the Hardware stores of the Far East, Mr. Lund says: "The wholesale stores of Japan, China, Singapore and Ceylon are particularly identical. They are owned principally by Englishmen, and are stocked with English and German goods. I did not see any exclusive Hardware stocks; the stores are more of a general merchandise character. The retail stores in all of these countries are owned by natives and Chinamen. They resemble second-hand and junk stores. There seems to be no effort on the part of the dealer to take care of his stock, for in a few days after arriving at his store the goods begin to rust, and if we had them here we would have to let them go as damaged stock. The stores are dirty and dark, and the tools are clumsy and heavy. I found a Hardware store at Port Said run by an Egyptian. This store had the same appearance as those in Asia. I noticed that in China and Japan some American made goods are beginning to work their way in, but the principal stock is composed of English and German manufacture. In Denmark the stores are similar to ours, but the stocks are principally English, German and French make. I took especial notice of Builders' Hardware and Tools. This class of goods is heavy and clumsy, and lacks the style and finish of our American made Tools. There are some American goods sold, especially in Copenhagen, but as a rule the prices are too high. Wages are very low there, and carpenters cannot afford our goods, and seem content in using the cheap, heavy tools. I consider the household goods made in Denmark superior to ours in workmanship, and they sell at a much lower price. The dealer in Denmark has very little ambition, as far as making money is concerned. People who were in business there when I was a boy are still plodding along in the same old rut, satisfied with a five per cent. profit, or, in other words, just enough to make a living, year in and year out. The ambition to become rich shows itself only when they come to America. Now, I want to say that I am very glad to get back to California. I stopped in New York and Chicago on my way home. I have made a complete circuit of this wonderful world of ours, and of all the lands under the sun, give me California and Berkeley.

The Wisnom-Bonner Hardware Co. will commence business the first of January, in San Mateo, Cal. The firm will consist of R. J. Wisnom, for the last fifteen years with the Palace Hardware Company; W. Wisnom, for four years with the Palace Hardware Company, and R. Bonner, for four years manager of the Hardware department of Levy Bros., San Mateo. The new store will carry a full line of general Hardware, Stoves, Tinware, Paints and Oils.

The Dunham, Carrigan & Hayden Co. has been appointed Pacific Coast agent for the celebrated Sawyer Tool Manufacturing Company, of Fitchburg, Mass.

It is thought that at the next annual convention of the California State Retail Hardware Association the wholesalers and manufacturers will take advantage of the gathering to place exhibits for the benefit of the visiting members.
INDUSTRIAL PRESS ASSOCIATION.

THE MINNEAPOLIS TRADE.

Business is good in all lines, weather conditions fine and we think that every one is very well satisfied with the prospects. We are too busy ourselves with our fire troubles to give you much of a letter this time. We have succeeded in getting an award through arbitration of $100,000.00 damages and in our opinion it is not enough by $15,000 and the insurance people have kept us out of business eight weeks. We have sold our salvage stock amounting to $125,000.000 to the Hardware Salvage Co., incorporated. They have opened a store in St. Paul where a portion of the goods will be sold and by the time this letter reaches you another store will be opened here for the same purpose. We did not care to sell this stock in our own store under our own name. W. K. MORISON & CO.

THE ST. PAUL TRADE.

Conditions, as existing in the Hardware trade, are so satisfactory that we feel that they could not be improved upon; with a firm and advancing market, with a demand exceeding our greatest expectations, we feel that we have no complaints to make, but rather that we congratulate ourselves on the prospects. We advise all to get contracts placed, because we feel that something very unusual and unexpected must happen if prices are not higher in the Spring than they are at present. Our local conditions are very good.
HACKETT, WALTHER, GATES HARDWARE CO.

THE PHILADELPHIA TRADE.

There is very little ground for complaint so far as trade is concerned, as the volume of business is good and most of the orders are for immediate and hurried shipment. Of course, the season of the year is reflected in the nature of the goods sold, as Cutlery, Skates and fancy goods of all kinds for the holiday trade are largely in evidence. We need, however, colder weather for the Skate trade, as the retailers are not likely to sell a large quantity as long as the present mild weather continues. A great deal may happen in a few days, and perhaps by the time your subscribers are reading this article we may be wearing heavy coats and burning high priced coal to keep warm. The general market is very firm, and there is a steady stream of advances which are quite general in character, covering many varied lines. Almost all kinds of goods seem to feel the pressure of higher costs of manufacture, and whether their component parts are iron, steel, spelter, copper, brass or even wood, cotton or leather, still from all these different quarters comes a steady apology that higher prices are being forced by reason of heavy advances in raw material. So far almost all the advances made in manufacturing goods have been moderate and conservative, and manufacturers are to be complimented in having withstood the temptation to unduly enhance values. BIDDLE HARDWARE CO.

FOR SALE—A good Hardware business that has been established for twenty-five years in a growing village of 1,200 population in Southern New York. Only Hardware in place. Has a good farming section and has one industry that employs 350 men day and night; also five other industries that employ about 175 men. Has three steam railroads and one electric railroad. Reason for selling, want to go into another line of business. Will give possession January 1, 1906. Address, "Business Chance," care of HARDWARE.

AFFAIRS IN MEXICO.

WARNING AGAINST FRAUDULENT ENTERPRISES.

Consul-General Parsons, of Mexico City, who has been flooded with letters from persons throughout the United States making inquiries in regard to mining and agriculture in that country, after a careful investigation sounds the following note of warning that should be heeded by those who contemplate making investments in Mexican enterprises. He says:

WARNING TO INVESTORS.

Mexico offers a promising field for American capital and energy, especially now that a fixed value has been given to the currency of the country. With the great fluctuations in exchange which prevailed before the adoption of the measures for monetary reform, it was difficult to secure money for investments which under an unfixed currency are deemed safe. But it is still necessary, in spite of the publicity occasioned by recent exposures of fraudulent American companies operating in Mexico, to warn the people of the United States against Mexican investments, especially in mining and agriculture, except as the result of careful investigation.

We know at home that since the Spaniards began, some four hundred years ago, to exploit the mineral deposits of Mexico, thousands of millions of dollars worth of precious metals have been mined; that, for example, nearly one-third of the silver now existing in the world came from the mines of Mexico, and that to-day many of these mines are heavy producers of this and of other precious metals. Profiting by these facts, as well as by the credulity of the public and by a degree of inaccessibility which increases the chances for immunity from investigation, unprincipled Americans have secured enormous sums of money from the people of the United States for worthless shares in their so-called Mexican mines. And Americans, quite frequently the comparatively poor, will continue to lose their money in this way unless they take the trouble to investigate before they buy.

Americans should not invest in Mexican enterprises except as the result of personal investigation or from a report known to be reliable. They should not conclude because reputable banking companies in the United States act as trustees for Mexican enterprises that shares of stock in such concerns must have value, as these trusteeships as a rule have no bearing on the soundness of the proposition of the value of the stock, which may be absolutely worthless.

CLOAKED DESIGNS.

Promoters of the rankest frauds in Mexico usually seek to cloak their designs with some degree of respectability by getting men of reputation and wealth in both countries interested in their enterprises. The promoters have printed in their circulars names of many distinguished Americans as vouching for their business ability and integrity, and then trade and sell the stock on the strength of the names, with a knowledge that the enterprise is a fake. These names are generally obtained by the wily statement of the promoter who promises great returns, and frequently the names are used without authority.

Shareholders in an American enterprise operating in Mexico should not place much reliance on the reports of their fellow-shareholders who have inspected the property supposedly for their benefit; they are often misleading and inaccurate, and prospective or actual investors should not make much of the fact that leading business men of their locality are interested in such enterprises. Frequently enormous sums have been paid to middlemen for concessions that could have been secured from the Government for $100 to $1,000.

MANAGEMENT.

In the organization of enterprises in Mexico more attention should be paid to the question of management. Boards of directors in New York, Chicago, St. Louis, or San Francisco can not know conditions in Mexico sufficiently well to direct in detail affairs that demand personal attention. This applies particularly to tropical agricultural enterprises, many of which pay unearned dividends for advertising purposes, while other companies declare gross profits as dividends and thus seek to convey in their advertising matter the impression that such dividends were earned.

H. E. MYERS & BRO'S NEW CATALOGUE.

H. E. MYERS & BRO., Ashland, Ohio, have made us the recipients of a copy of their new Catalogue and Price List of Horizontal and Vertical Power Pumps, which is exceedingly attractive in appearance, and contains very valuable information. The book covers a complete line of Power Pumps and Cylinders for the use of the ordinary consumer that can be produced in quantity and stocked for various requirements. Heretofore, a power pumping outfit was an engineering proposition, necessitating blue prints and specific details for each individual location, involving an expenditure for the preliminary work and the pumping outfit itself above what the customer could afford to pay. It can be readily seen from the illustrations in the catalogue that the Myers Power Pumps are self-contained in the fact that they are mounted on a base, complete with air chamber and counter, in a compact form for operation in a small space, and of such construction that they have a wide range of connection, stroke and capacity. They are adapted for use in small factories, for fire protection, irrigating, apartment houses, summer resorts, and general barn and garden use, etc., and at a price that is decidedly interesting. The Company claims that these outfits are entirely satisfactory wherever used, and that there is a wide general requirement for them by those who believe in progress and up-to-date equipment. Catalouge will be gladly and promptly sent upon request.

RELIANCE EDGE TOOL COMPANY.

THE RELIANCE EDGE TOOL COMPANY was organized at Youngstown, Ohio, on November 15, the following directors being elected: John C. Wick, president of the Wick National Bank; Robert Bentley, president of the Ohio Iron & Steel Company; W. A. Beecher, vice-president of the Mahoning National Bank; Edward I. Brown, capitalist, and George E. Dudley, all of Youngstown, Ohio. The directors organized by electing Edward I. Brown president, Walter A. Beecher vice-president and George E. Dudley secretary and treasurer. Charles H. McCarty, until recently treasurer of the Winsted Edge Tool Works, manufacturer of the T. H. Witherby brand of Chisels, has been elected general manager of the company. Mr. McCarty has had a very thorough experience in the manufacture of Edge Tools. The new company's product will be known to the trade as the Reliance and at first will consist of Carpenters' Tools, such as Chisels, Gouges and Drawing Knives. The concern has let a contract to Heller Brothers of Youngstown for the erection of a main brick building 325 feet in length, a large portion of which will be two stories in height. The company expects to be on the market with its products shortly after January 1.

Hamilton Rifles

Have a name for absolute safety, accuracy and strength of shooting.

MODEL No. 23 is of the **Bolt Action** type. It is unique. Combines greatest strength with least weight.

"Take Down"

Chambered for .22 Caliber Short or long Rim Fire Cartridges

Prices:

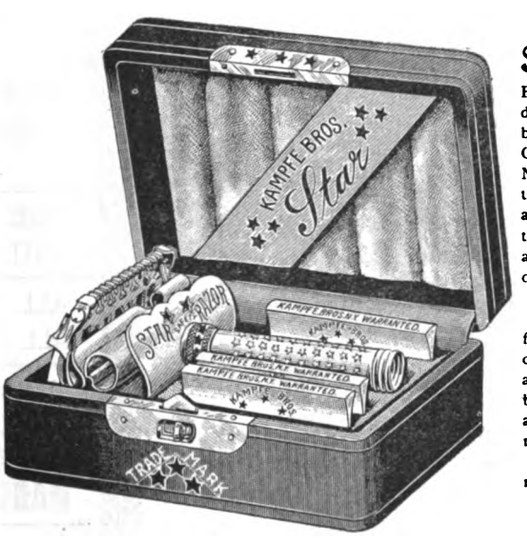
STAR SAFETY RAZORS



Leads all others in the number of Highest Awards received at various Expositions.

They also received the Highest Award, the Gold Medal, at the Lewis & Clark Exposition, 1905.

WHY hesitate to carry a line of Star Safety Razors and Supplies when you have the opportunity of procuring a handsome display and stock case with small and large assortments of Star Safety Razors, which assists in disposing of a quantity of them and also knowing that the retail prices are strictly maintained so as to assure the dealer of a good profit?

The Star Safety Razor has stood the test for the past twenty-five years and our vast experience in all these years h s helped to make the Star Safety Razor the most practical and the only mechanically perfect safety razor in the market to-day.

Our Star Safety Razor Blades cannot be equalled in quality and workmanship anywhere in the World.

STAR BLADES are hand-forged from high grade special refined bar steel Each blade is hardened and tempered individually. They are concaved and honed by hand on scientific principles—this is the OLD FASHIONED PROCESS; IT CANNOT BE IMPROVED UPON. In addition to this the Star afety Razor Blade is a MAGNET in itself—will never irritate the skin and will retain a keen cutting edge as age improves its keenness and cutting qualities.

The Star Safety Razor has a reputation for quality and superiority throughout the civilized world. More Star Safety Razors are in daily use than all other makes combined, and these daily shavers are our best advertisers. They are constantly recommending the Star Safety Razor to others.

Merit alone has brought about these results.

FOR THE HOLIDAY TRADE.

How is your stock of Star Razors? Are you prepared to meet the demands of the Public?
They are extensively advertised to create a demand and profit for the dealer.
You make no mistake in offering the reliable Star Safety Razors as Holiday leaders.

WHY SHOULD YOU SUFFER? Be your own Chiropodist

E. C. ATKINS & CO.

LEADING SAW & TOOL MANUFACTURERS

EASTERN BRANCH:
64 READE ST., NEW YORK CITY.

INDIANAPOLIS, IND.

RECENT TRADE PUBLICATIONS.

BIGELOW & DOWSE COMPANY, 229 Franklin St., Boston, Mass., have sent us a copy of their large Winter Catalogue which shows an exceedingly attractive line of the goods manufactured by them. They carry a complete line of fences, including Poultry and Garden Fences, which they state are enjoying phenomenal success, and are conceded to be far superior to any other fencing on the market. The book gives a very extensive showing of attractive and useful articles that will appeal strongly to the dealer who is looking for good sellers for the holiday season. Some very handsome designs are shown of their cut glass goods, which are deeply and richly cut, also Quadruple Plated Hollow Ware, Community Silver, Skates and Ice Creepers, High Grade Pen Knives, Etc. If you have not received a copy of this comprehensive catalogue write for the same at once and prepare yourself in advance for the season's trade, remembering it is profitable for you to anticipate your wants.

INDIANA MFG. CO., Peru, Ind., have sent us two new illustrated Catalogues and Price Lists, both of which are handsome publications. The one is entitled, "The Indiana Refrigerators" and the other, which is the more comprehensive of the two, being their 1906 Catalogue, is entitled, "The North Star Refrigerators," and will be found of great interest to all giving same a careful perusal. They state as follows: "In presenting the trade with our Catalogue for this season we do so with the knowledge that herein will be found illustrated the finest line of Refrigerators manufactured. We have endeavored to turn out only such goods as would serve their purpose well, and this can only be accomplished by using the highest grade material obtainable, and employing only the best workmanship. We have succeeded in placing our goods beyond competition, and the dealer handling our goods is rewarded by securing the highest class trade in his vicinity." The catalogue contains a large number of very fine cuts of "North Star" and other Refrigerators, and dimensions and prices are given in connection with each. Send at once for this exceedingly interesting and useful book, copy of which may be had upon application.

ROLLMAN MFG. CO., Mount Joy, Pa., have sent us a book of proof of a series of newspaper ads., which they have prepared in response to a general demand on the part of their customers. They state that electrotypes of these cuts (no type matter) will be sent free to any dealer handling their Food Choppers, and that after a dealer has selected a cut and given it a run as long as desirable, if he returns it another will be sent in its stead, until the entire series has been used. Customers have the option of using the ads. just as they are or of altering or adding to them as desired. Send at once for this very interesting book, addressing your communication to the "Advertising Department." Accompanying this book is a small illustrated catalogue of Household Specialties manufactured by this Company, including the Rollman Meat and Food Chopper (three styles), Peanut Butter Machine and Spice Mill, Cherry Seeder, Apple Cutter, Peach Stoner, and Potato Cutter. A carefully prepared Price List of Parts is given in connection with each machine. Write for Catalogue No. 1160.

✤

He—What would you say, Miss Ethel, if I should tell you that I had called this evening to place a solitaire upon one of those dainty fingers of yours?

She—I would say, Harold, that your speech has the true ring.

Hundreds of thousands of people still ride bicycles. The craze has passed, but the demand still exists. It is a steady, legitimate, growing demand; a demand for improved, well built, serviceable wheels; a demand best met with

Pierce Cycles

The rear wheel of all bicycles carries most of the weight of the rider. In the rigid frame, the jar and vibration due to irregular road surfaces are communicated to the body of the rider. In the Pierce Cycle the Cushion Frame absorbs this vibration and the rider is free from any inconvenience caused by roughness of the road. By examinining the Pierce catalogue, which is now ready for distribution to the trade, anyone will understand the value of the Pierce Cushion Frame construction.
